Budapest

Erzsébet Bridge

Main Page | Community Portal | Featured content | Current events | Recent changes | Random article | Help | Contact Wikipedia

Erzsébet híd, **Erzsébet Bridge** or **Elisabeth Bridge** is the second newest bridge and one of the most elegant ones of Budapest, Hungary, connecting Buda and Pest across the River Danube. It is situated at the narrowest part of the Danube, the bridge spanning only 290 m. It is named after Queen Elisabeth, a popular queen and empress of Austria-Hungary, who was tragically assassinated. Today, her large bronze statue sits by the bridge's Buda side connection in the middle of a small garden. Its two ends are: * March 15 Square (with the oldest church in Pest, Inner City Parish Church, built in the 13th century) and the famous Mátyás Pince restaurant * Döbrentei Square in Buda with the monument of Saint Gellért on the Gellért Hill, a sculpture of Queen Elisabeth and the Rác Baths and Rudas Baths nearby. A luxury spa hotel is currently being built in the area. The original permanent crossing, a decorative suspension bridge, was built between 1897 and 1903, amid a corruption scandal. The Buda end of Erzsébet bridge runs directly into the massive foot of Gellért Hill, necessitating a complicated arrangement of roads to connect to the bridge. The bridge was designed in such a way because a wealthy nobleman, a member of the City Council owned the particular area of the riverbank. He wanted to make a fortune by selling the piece of land for bridge constructon purposes, bribing the other councilmen and engineers on purpose. He managed to sell the land at greatly inflated prices. In the era of horse drawn carriages the geometry issue was not considered significant and the resulting cost overruns were covered up, therefore no prosecution took place. In recent decades, many motorists have been permanently injured or killed in the sharp turn that immediately follows the bridgehead. After a terrible accident in 2004, which killed a family, a speed limit of 40 km/h was posted for the west-bound lanes. The original Erzsébet Bridge, along with many other bridges all over the country, was blown up at the end of World War II by retreating Wehrmacht sappers. This is the only bridge in Budapest which could not be rebuilt in its original form. Pictures and some salvaged elements from the old bridge can be seen on the grass in front of the Museum of Transport in City Park. The currently standing slender white cable bridge was built on the very same location between 1961–1964, because the government could not afford to construct entirely new foundations for the bridge. The main spar cables of the bridge are hexagonal in cross section, composed of thousands of elementary steel wires of seven different diametres, partly because early computers were unable to provide solution for a circular cross section main cable batch. The novel design, planned by Pál Sávoly, was a first in Central Europe and not without weaknesses. Tram traffic and its heavy tracks had to be removed from the bidge in 1973 after signs of cracks appeared in the structure. The 2×3 lane Erzsébet bridge is relatively well maintained because it is part of the route where foreign dignitaries are

Erzsébet híd in the foreground, seen from Gellért Hill

The bridge from above

Today's featured article

"**(I Can't Get No) Satisfaction**" is a rock song written by Jagger/Richards. *Rolling Stone* magazine ranked the song as #2 on their 500 Greatest Songs of All Time. It also made #1 on VH1's 100 Greatest Rock and Roll Songs of All Time. The song was first released as a single in the United States in May 1965, but was also featured on the American version of The Rolling Stones album, *Out of Our Heads*, released in July of the same year. "Satisfaction" was a smash hit, giving them their first number one in the United States. The British version of *Out of Our Heads* did not feature "Satisfaction", as the song was released as a single there in the August of that year — it was not orthodox practice in the United Kingdom at that time to include songs from singles on albums. The single shot to number one in the United Kingdom as well; it was the Rolling Stones' fourth UK number one. Jagger later credited "Satisfaction" for popularising The Rolling Stones, and suggested that its success was due to its reflection of the "spirit of the times". The song's themes included sexual intercourse and anti-commercialism, causing it to be "perceived as an attack on the status quo". (**more...**)

In the news

- Jamaican police announce they believe **Bob Woolmer** (*pictured*), coach of the Pakistan cricket team, was murdered following his team's unexpectedly early elimination from the World Cup.
- More than one hundred coal miners are confirmed dead in the **Ulyanovskaya Mine disaster**, Russia's worst mining accident in a decade.
- Results of Finland's **elections** show the opposition gaining ground but incumbent Prime Minister Matti Vanhanen likely to remain in office.
- The People's Republic of China **adopts** its first law regulating property ownership.
- The World Wide Fund for Nature announces that the **Bornean Clouded Leopard** is a new species.
- The beating and detention of Zimbabwean opposition leader **Morgan Tsvangirai** prompt international condemnation of the regime of President Robert Mugabe.

GLOBE Program

From Wikipedia, the free encyclopedia

The **GLOBE Program** or **Programme** is a worldwide, hands-on, primary and secondary school-based education and science program. It seeks to teach young students experimental skills using real experiments and equipment and collaboration with students in a global network of over a hundred other participating nations. GLOBE is an acronym for *Global Learning and Observations to Benefit the Environment*.

The program is operated by the University Corporation for Atmospheric Research (UCAR) out of Boulder, Colorado and sponsored by the National Oceanic and Atmospheric Administration (NOAA), NASA, and the National Science Foundation.

That's a music school in Budapest, Hungary, especially for people wanting to learn how to make jazz. Good cultural events also take place here.

Today we are creating a new category and some new forums. this category will be a reflection of the current Earth category, with a few exceptions... The forums within this new category will be populated by moderators and administrators moving posts that they feel represent more than just a passing need to stick a pin in the earth's surface. We are not saying these represent only the best, but we are saying we learned something about the Earth, its places, its people, or things upon it, from the posts we move.

Hungarian Regions - a countryman's impressions
#817025 - 03/01/07 05:03 PM

Reply Quote

View in Google Earth View in Google Maps (163 downloads)

hi all!
welcome to the countryside!
in this thread i am to share my impressions about the spirit i like in each region of my country.
now -as i am writing these lines- the attached KMZ is not done at all!
with every forthcoming reply from me i will give some foretaste to every update.

have a good time not just in the city!
****

0.UPDATE: **Southern Great Plain**
the world of endless steppes, meadows, floodplain forests, thermal water;
the home of the Hungarian Grey, the wranglers and embroideries, paprika, onion & garlic and much more delicacy!
(turn "Regions Overlay" OFF when viewing settlements! also advise to view by elevation exaggeration = 3!)

Using World Wind with GLOBE data

A 3D Earth-viewing application developed by NASA Ames Research Center

Introduction

World Wind lets a user zoom from satellite altitude into any place on Earth, automatically selecting appropriate resolution satellite imagery and elevation data to create aerial views or views of flying across the world in any direction. It was designed to be easy to use, and the only control needed is a two button mouse. Navigation is accomplished with single mouse clicks and the ability to type in any location and automatically zoom to it.

World Wind also allows viewing of other datasets in its 3D environment, including GLOBE data, weather event animations developed by Goddard Space Flight Center, MODIS data updated daily, and various map reference layers such as country borders, city names, etc.

Many of the datasets that can be displayed by World Wind are too large to download the entire dataset to the user's machine, so only the parts being viewed are downloaded and stored in compressed format.

The World Wind application can be downloaded from NASA's World Wind Web site: http://worldwind.arc.nasa.gov/download.html, and can be used under the terms of the NASA Open Source Agreement. It requires a fairly high-end PC to run, including Windows 2000 or XP; Pentium 3, 1 GHz or higher; 256 MB of RAM; 3D graphics card; DSL / Cable internet connection or faster; 2 GB disk space.

Viewing GLOBE data in World Wind

GLOBE data can be viewed in World Wind through WMS (Web Map Service) by these steps:

1. Start up World Wind with the world called "Earth". (This is the default. Other available worlds include the Moon and Mars.)

What is this?

Tagzania is about tags and places. If you register and log in, you can add places, points, to create and document your maps. When you add a point, you may tag it with keywords. That way, Tagzania is not only a place to build and keep your own maps, shared territories are created as well. more info»

What can be done using those visualization technologies ?

1. Every Country Coordinator should be a Google Earth Community member and have a rights (and responsibilities) to edit corresponding part of the GLOBE Program layer in Google Earth engine.
2. Every GLOBE school can be marked and the picture of the school can be added.
3. Additionally to the picture of the school the picture of the GLOBE teachers and teams can be added.

4. Every data correctly sent to GLOBE database should immediately appear at the corresponding layer of Google Earth and World Wind.
5. Most important is to make it possible for GLOBE students to suggest the ways of improving GLOBE visualization component.
6.
7.
8.
9.

"When the Rate of Change Outside is Greater Than the Rate of Change Inside, The End Is In Sight"

Jack Welch, Former Chairman General Electric
