Do GLOBE, Do Science

Become a GLOBE Educator

With GLOBE, students learn science by doing science. Students from around the world collect and analyze environmental data, contributing to a NASA-funded database and building skills applicable to future careers in data and science. Students can conduct research using these data and submit their work to the International Virtual Science Symposium (IVSS) for feedback and recognition.

GLOBE is designed for educators. GLOBE complements STEM curriculum programs. It offers step-by-step guidance for collecting environmental data, scientific background information, and learning activities for all grade-levels.

GLOBE connects educators, students, and scientists from across the world.
