Abstract:

Our school is located in the western side of Al-Ahsa Governorate, east of the Kingdom of Saudi Arabia, where the groundwater and water sources in it contain sulfur, where evidence indicates the existence of farms earlier in the same area and the irrigation method used was dependent on untreated natural water, but after the drought of most natural sources and dependence on irrigation on other sources, the rate of cultivation in the region decreased. In conclusion, we treated irrigation water using Sulfuric acid

Key words : ordinary water - irrigation -Sulfuric acid
