

D4: GLOBE Website Data Access and Visualization

**Cornell Lewis, Raytheon Corp.
GLOBE Website Project Manager**

**Dr. Dixon Butler, NASA/ADNET Systems, Inc.
Consultant**

8/15/13

THE **GLOBE** PROGRAM

Overview

- **Introductions**

- **Who We Are:**

- Cornell Lewis**

- Project lead for website development and operations

- Dixon Butler**

- Science Advisor to NASA on the GLOBE Program
 - Former Director of the GLOBE Program

- **Who you are: Job Title, Web Use**

- **Goals of the Session**

- **Demonstrate how to find, visualize and output data**
 - **Provide hands-on training**
 - **To understand what your role and job functions are to better meet your needs**
 - **Listen to your concerns and feedback on how to improve the viz system**

Agenda

- **Introduction of the Visualization System**
- **Where is the Visualization System?**
- **Interface Overview**
- **Overview of Key Functionality**
 - **Map Types**
 - **Layers**
 - **Filtering**
 - **Data Tables**
 - **Plotting/Graphs**
 - **Exporting**
- **Your Assignment**
- **Questions and Answers**

Introduction to the Visualization System

- **Ways to look at data:**
 - **Measurement maps:** *How do values vary from place to place?*
 - **Graphs:** *How do values vary over time?*
 - **Site tables:** *What are specific values for further analysis?*
 - **Layer tables:** Sort by latitude, longitude, elevation, or value
- **Ways to look for data:**
 - **Data count maps:**
 - > *Where are there data?*
 - > *Which sites have many measurements?*
 - > Filter by time period or elevation
 - **Layer tables:** Sort by latitude, longitude, elevation, or amount
 - **School information:** *What sites? How many data of each type?*
- *Where is a site, school, or teacher?*

Using the GLOBE Visualization System

THE GLOBE PROGRAM

Log In

GLOBE Learning Expedition

Students at the GLOBE Learning Expedition (GLE) in Cape Town, South Africa take surface temperature measurements in the waters off the Cape of Good Hope. GLOBE students from around the world have the opportunity to present their research projects to their peers, to GLOBE scientists, and the larger GLOBE community, every few years at GLOBE

Finding GLOBE Data

GLOBE Data

Currently the GLOBE Data Visualization Tool supports a subset of protocols, however over the next few months there will be additions to the tool with new capabilities and additional data becoming available to visualize the complete set of 56 protocols.

GLOBE provides the ability to view and interact with data measured across the world. Select our [visualization tool](#) to map, graph, filter and export data that has been measured across GLOBE protocols since 1995.

Long-term Data

Long-term air temperature and precipitation data from the Global Historical

This is the GLOBE Visualization Landing Page. Read the Welcome box and then close it.

The screenshot displays the GLOBE Visualization Landing Page interface. At the top, a blue header bar contains the 'Map Type' dropdown set to 'Measurement', the 'Data Count' tab, and a 'Measurement Summary' section showing 'Data on Map: 0' and 'Date: 2013-04-03'. On the left, a 'Layers' panel is visible with sections for 'Data Layers' (Add +), 'External Layers' (Add +, 0 Layer(s)), and 'Base Layers' (Google Physical). The main area is a world map showing various countries and oceans. A 'Welcome' dialog box is centered on the screen, containing the following text:

Welcome to the GLOBE Visualization System

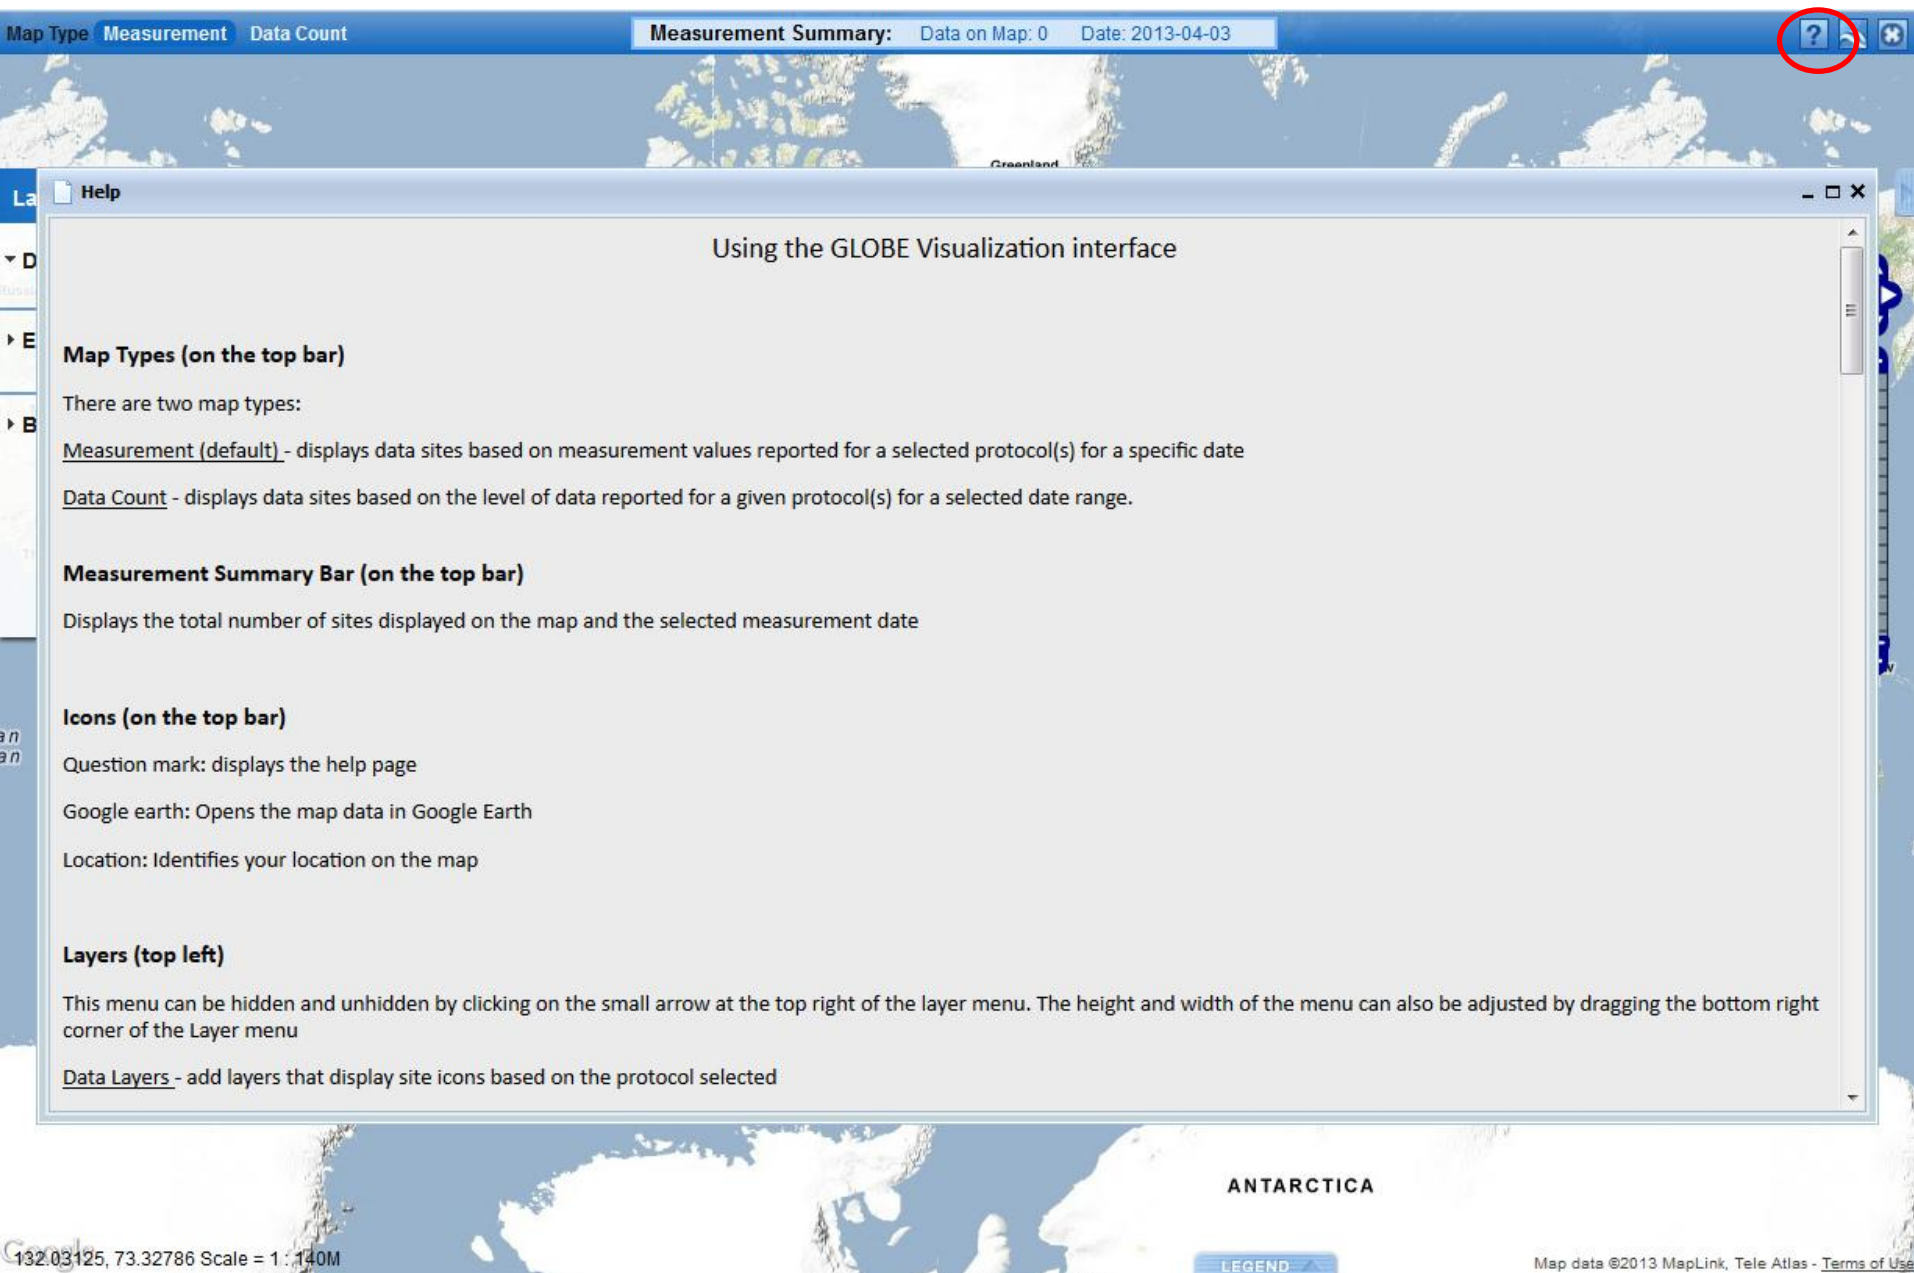

Add a data layer to begin visualizing the GLOBE data. Once a layer is selected, use the filters to further refine your search. You can filter by date, data range, school, site, city and more. There are two map views available: Measurement and Data Count. You can toggle between the two at the top left.

For further instructions, view the help page by clicking on the [?](#) icon at the top right.

☐ Don't Show Again

At the bottom left, the Google logo and coordinates '-95.42969, 65.07213 Scale = 1 : 140M' are visible. At the bottom right, there is a 'LEGEND' button and a copyright notice 'Map data ©2013 MapLink, Tele Atlas - Terms of Use'.

Click on the  button in the upper right corner to open the Help page.

The screenshot shows the GLOBE Visualization interface. At the top, there is a blue header bar with the text "Map Type Measurement Data Count". To the right of this bar is a "Measurement Summary" section showing "Data on Map: 0" and "Date: 2013-04-03". In the top right corner of the header bar, there is a question mark icon circled in red. Below the header bar is a map of Antarctica. A "Help" window is open in the foreground, titled "Using the GLOBE Visualization interface". The window contains the following text:

Map Types (on the top bar)

There are two map types:

- Measurement (default) - displays data sites based on measurement values reported for a selected protocol(s) for a specific date
- Data Count - displays data sites based on the level of data reported for a given protocol(s) for a selected date range.

Measurement Summary Bar (on the top bar)

Displays the total number of sites displayed on the map and the selected measurement date

Icons (on the top bar)

- Question mark: displays the help page
- Google earth: Opens the map data in Google Earth
- Location: Identifies your location on the map

Layers (top left)

This menu can be hidden and unhidden by clicking on the small arrow at the top right of the layer menu. The height and width of the menu can also be adjusted by dragging the bottom right corner of the Layer menu

Data Layers - add layers that display site icons based on the protocol selected

At the bottom of the map, the word "ANTARCTICA" is visible. In the bottom left corner, there is a Google logo and the text "132.03125, 73.32786 Scale = 1 : 140M". In the bottom right corner, there is a "LEGEND" button and the text "Map data ©2013 MapLink, Tele Atlas - Terms of Use".

Overview of the Visualization Window Features

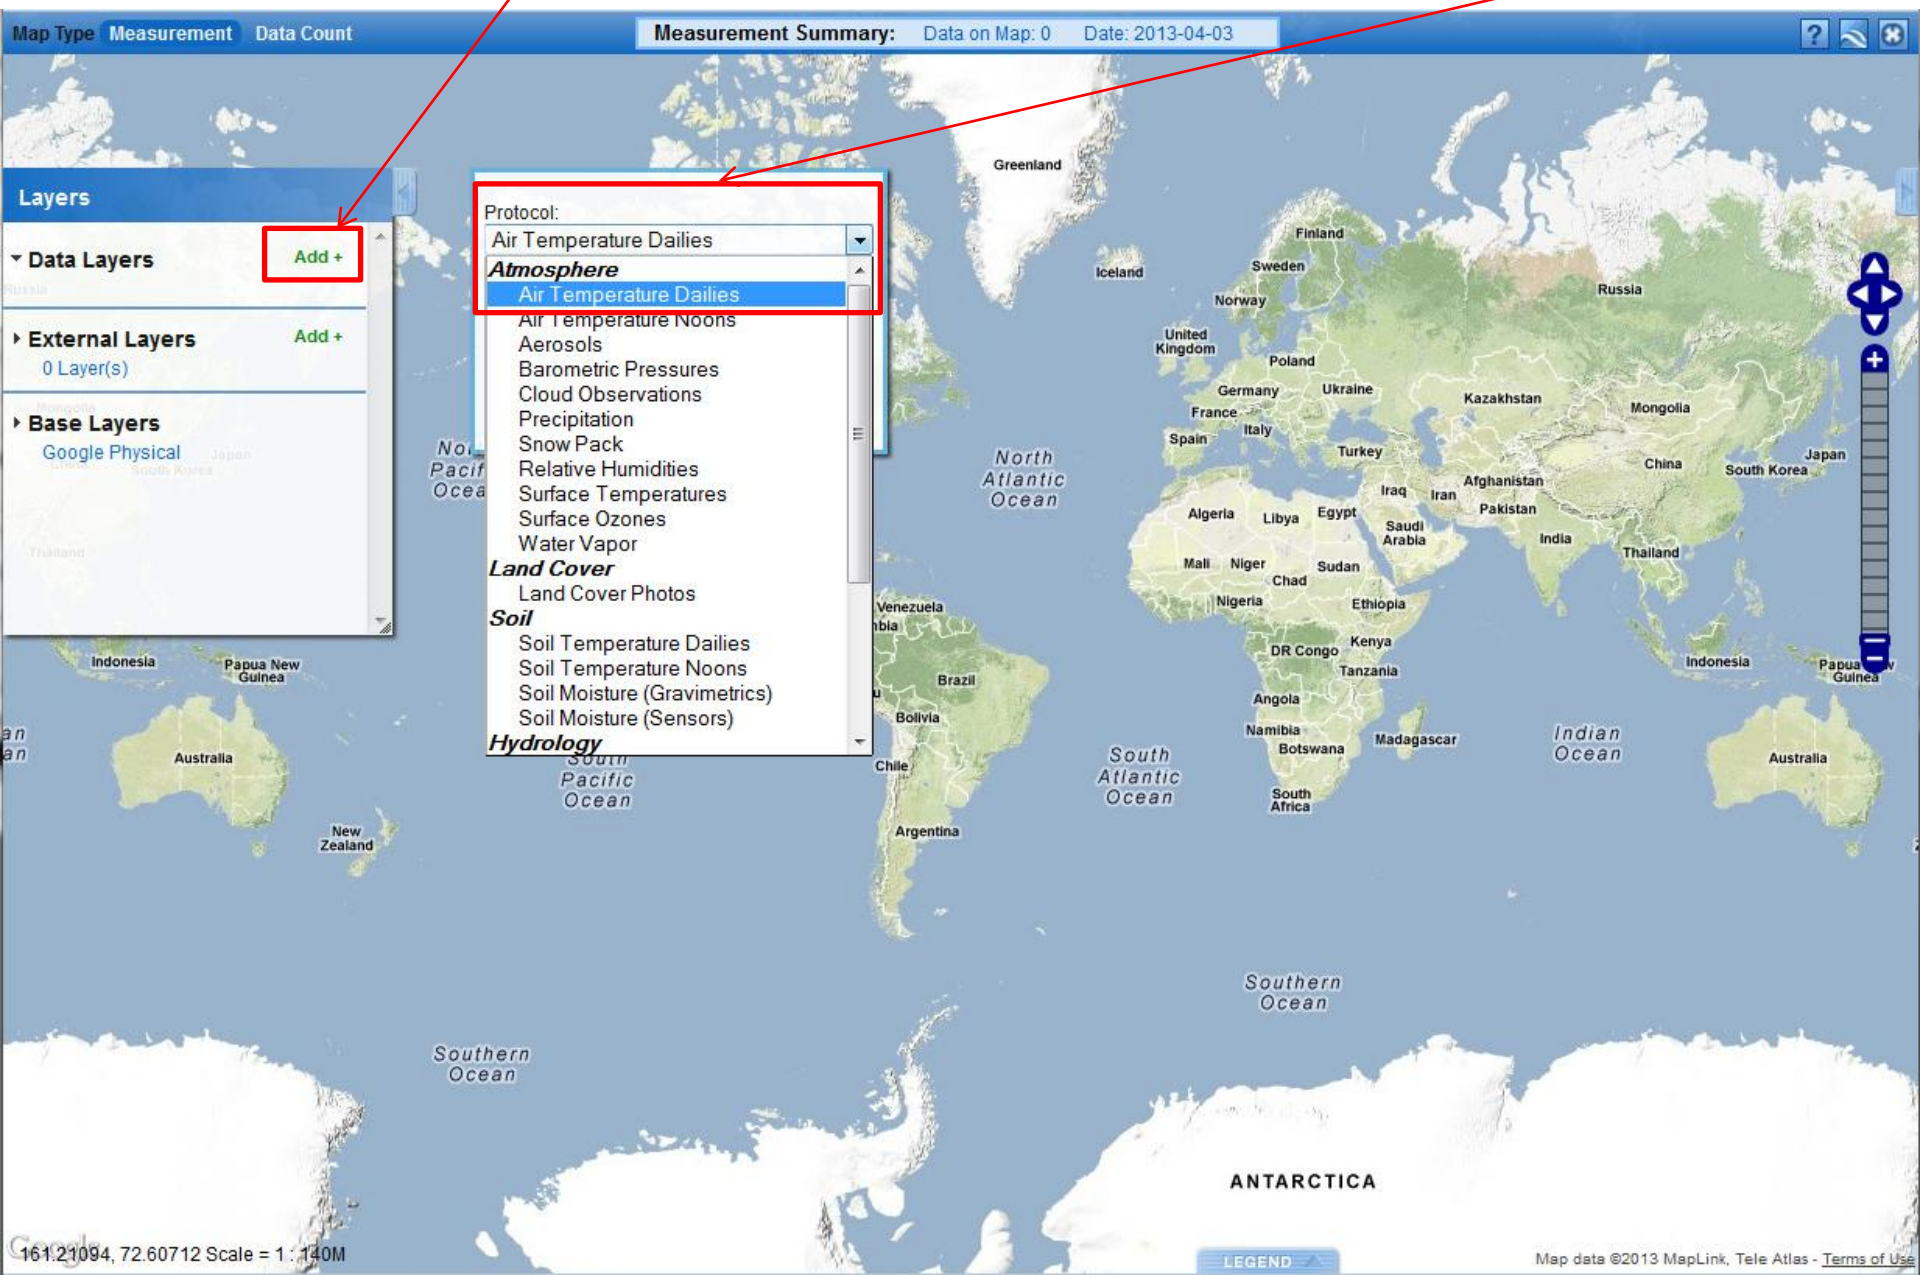

The Data Count view helps identify sites with larger datasets for a given data type.

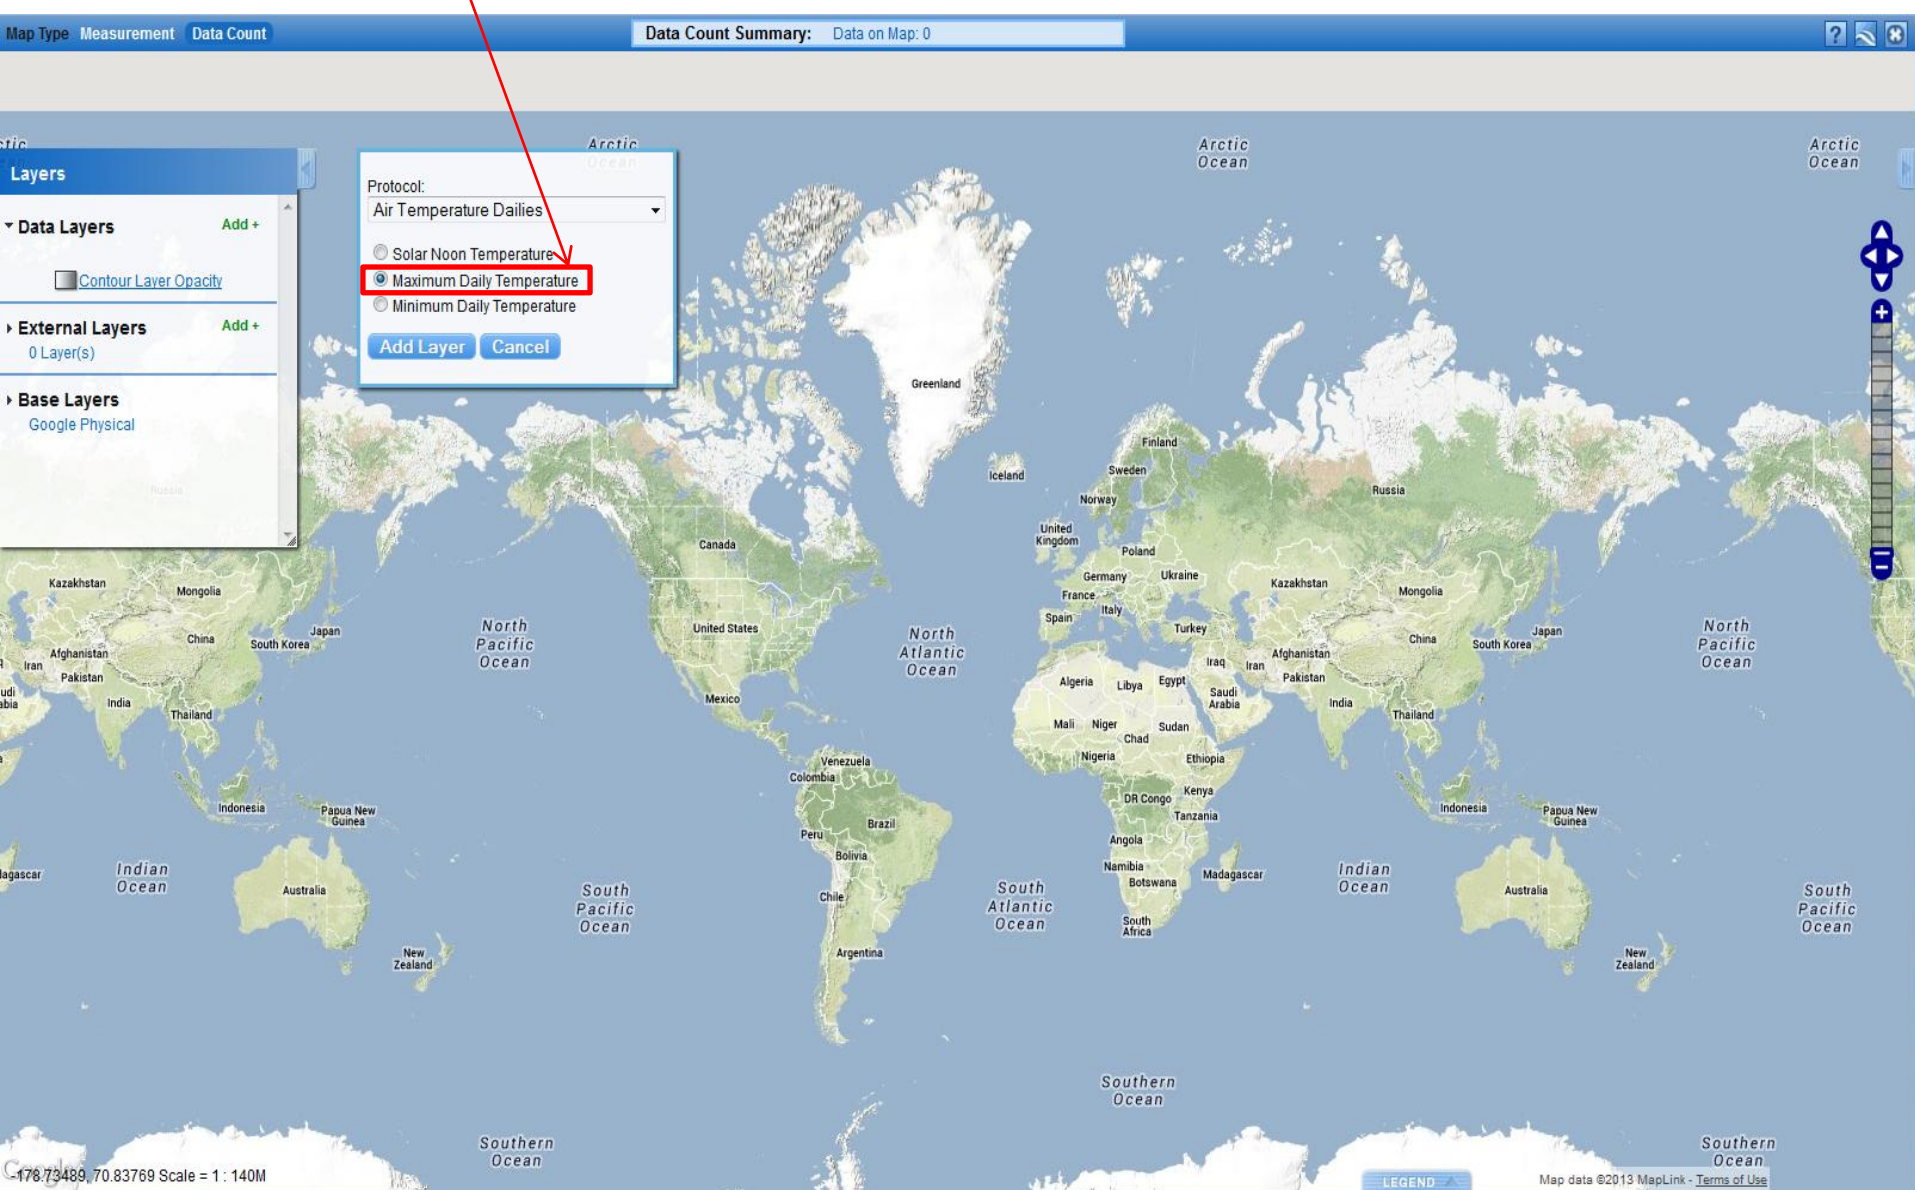

To see some data, click on **Add+** next to Data Layers.

Select the data type you wish to see from the drop down menu.

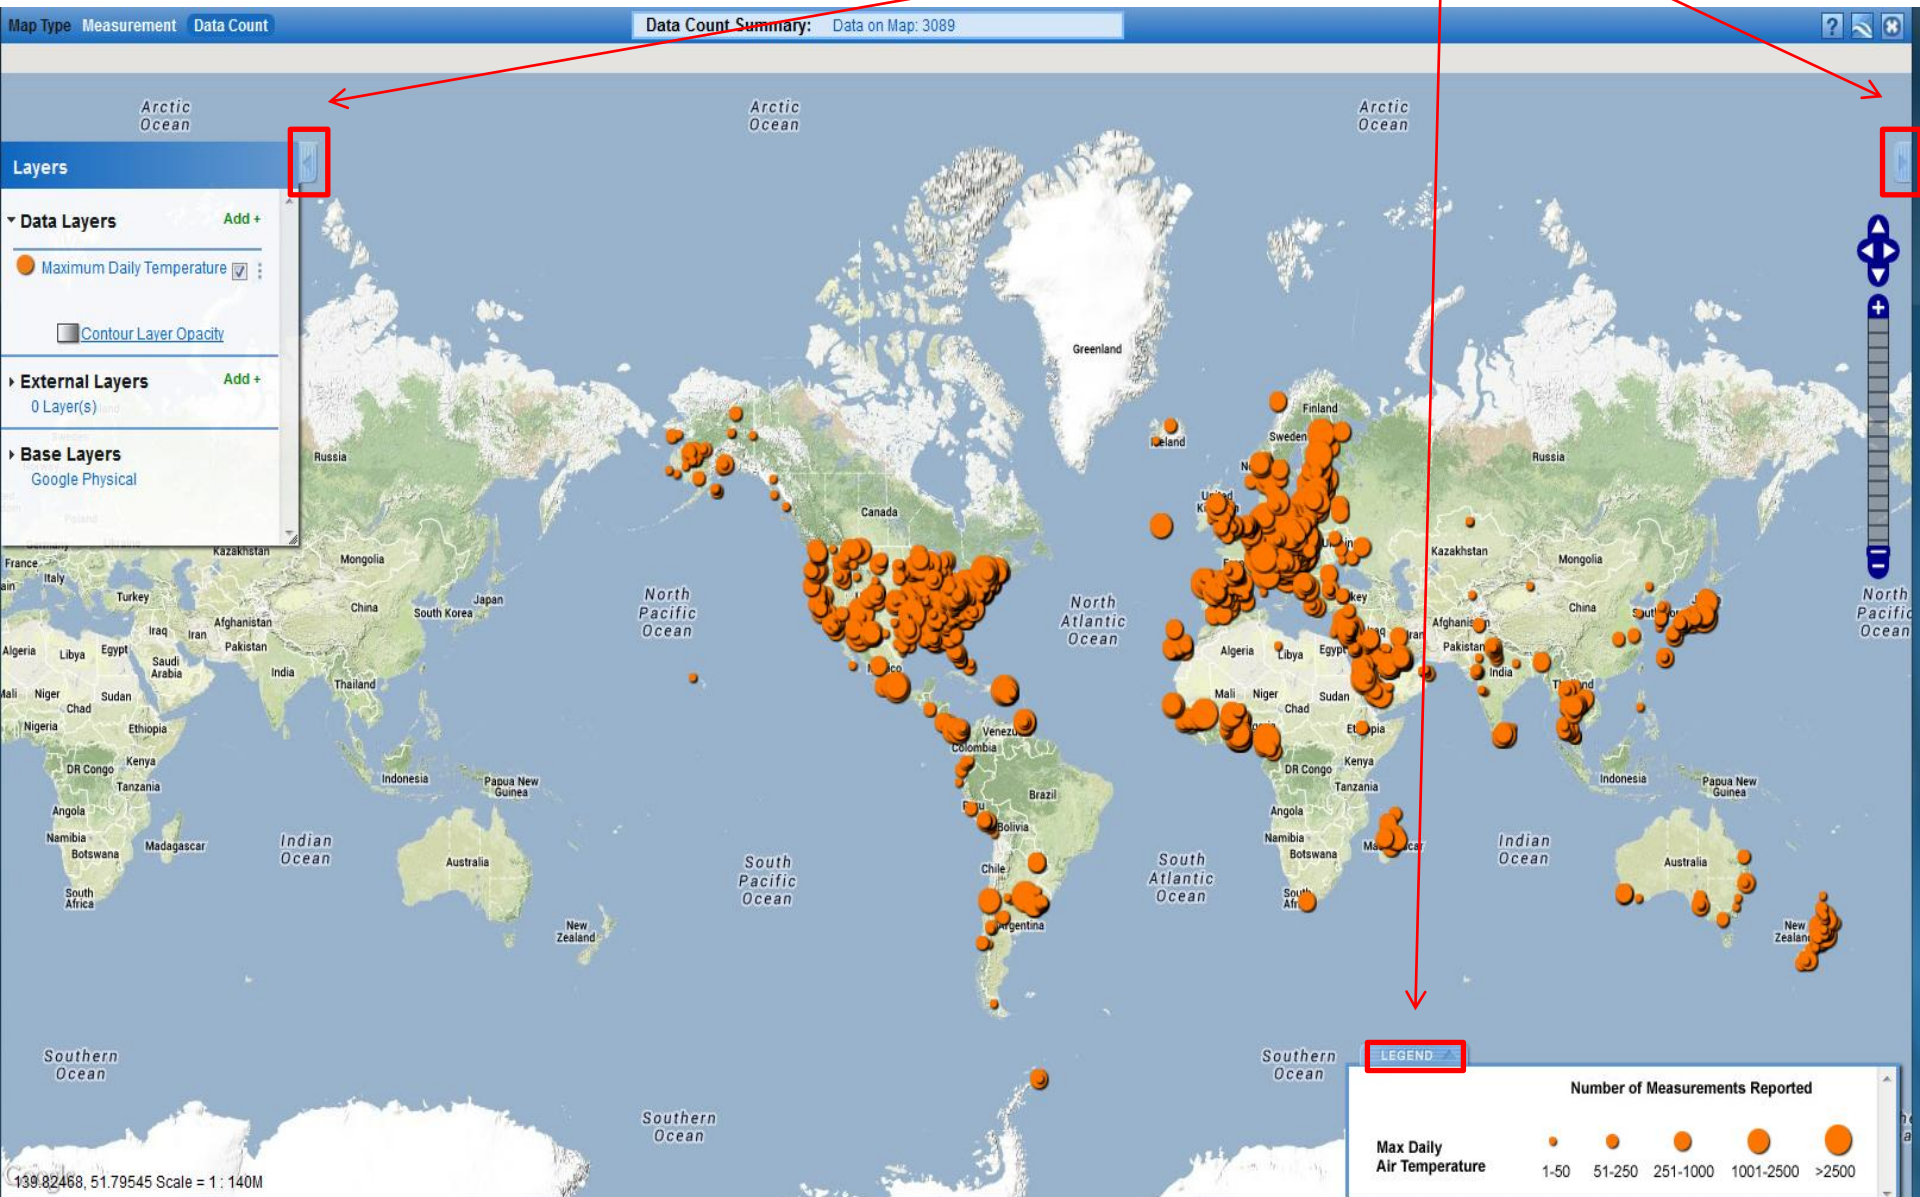

For this tutorial select Air Temperature Dailies from the drop down, click on the radio button next to **Maximum Daily Temperature**, and then click on the **Add Layer** button.

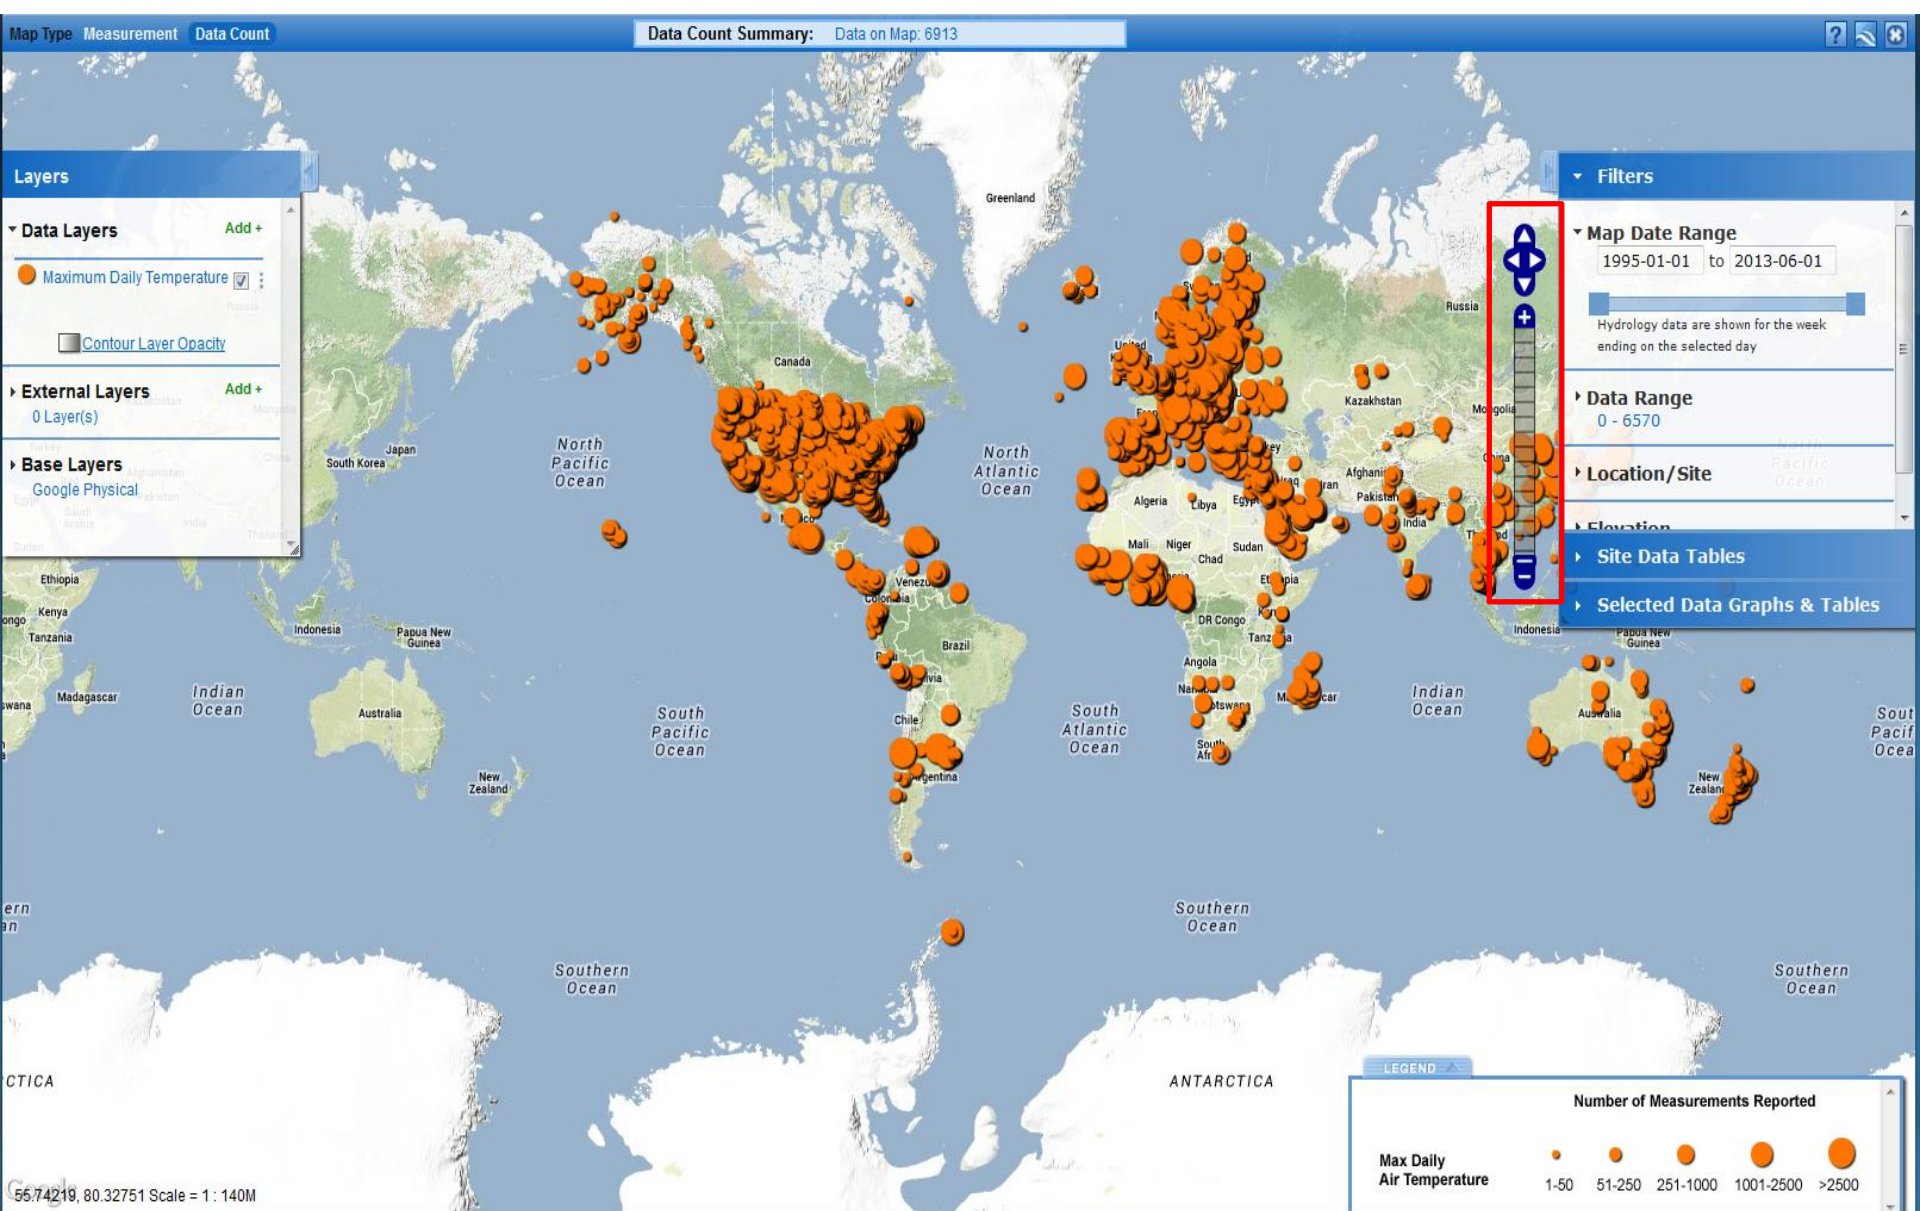

The new layer will be added to the map. A legend will pop-out of the bottom right corner and the Advanced Features Control will pop-out of the right side of the screen. The Filters Controls will be open by default with the **Map Date Range** set to the entire history of GLOBE.

When the pop-out boxes cover some of the data, they can be minimized and maximized by clicking on their tabs.

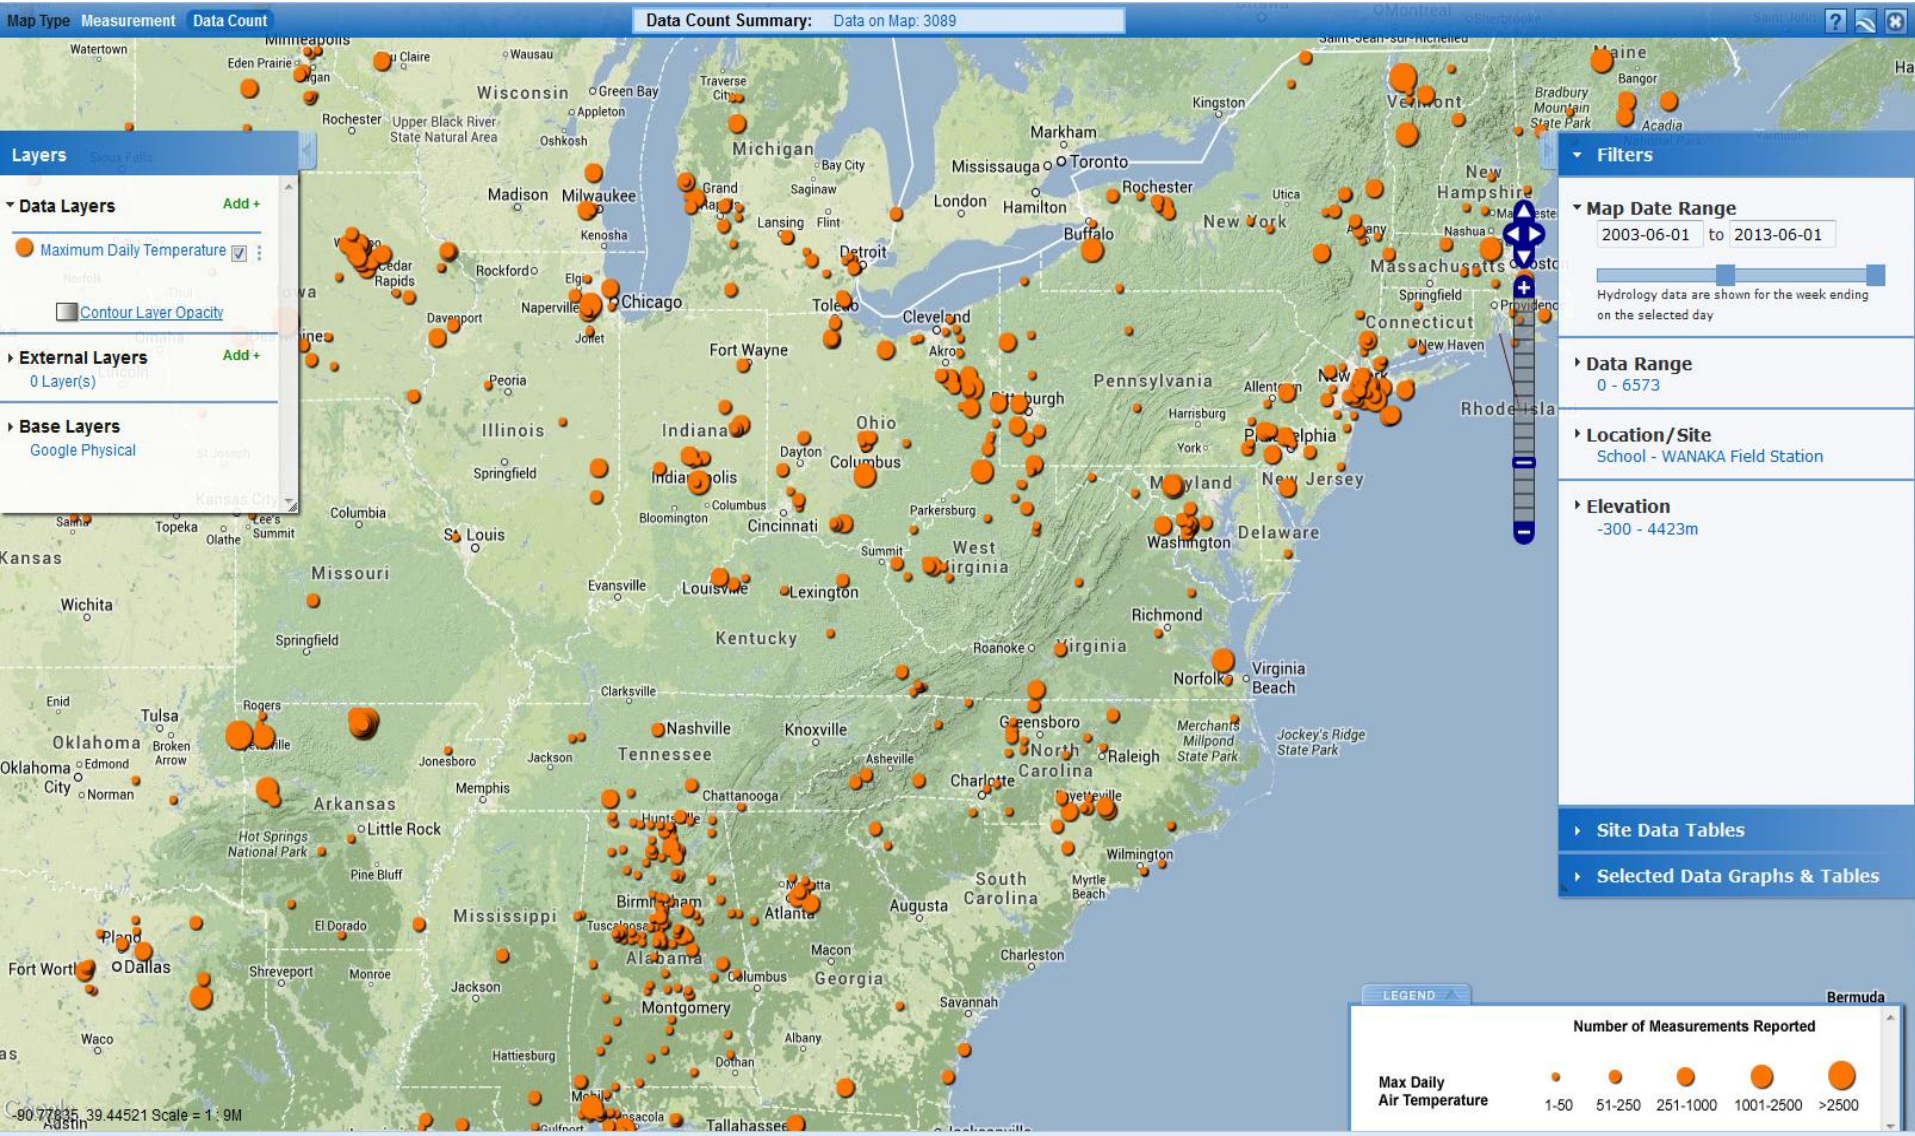

You can control how much of the world map is visible using the movement controls or your mouse. With the mouse, click and drag in any direction to move the map, double click to zoom in one unit on the cursor location, or use the mouse scroll wheel to zoom in and out.

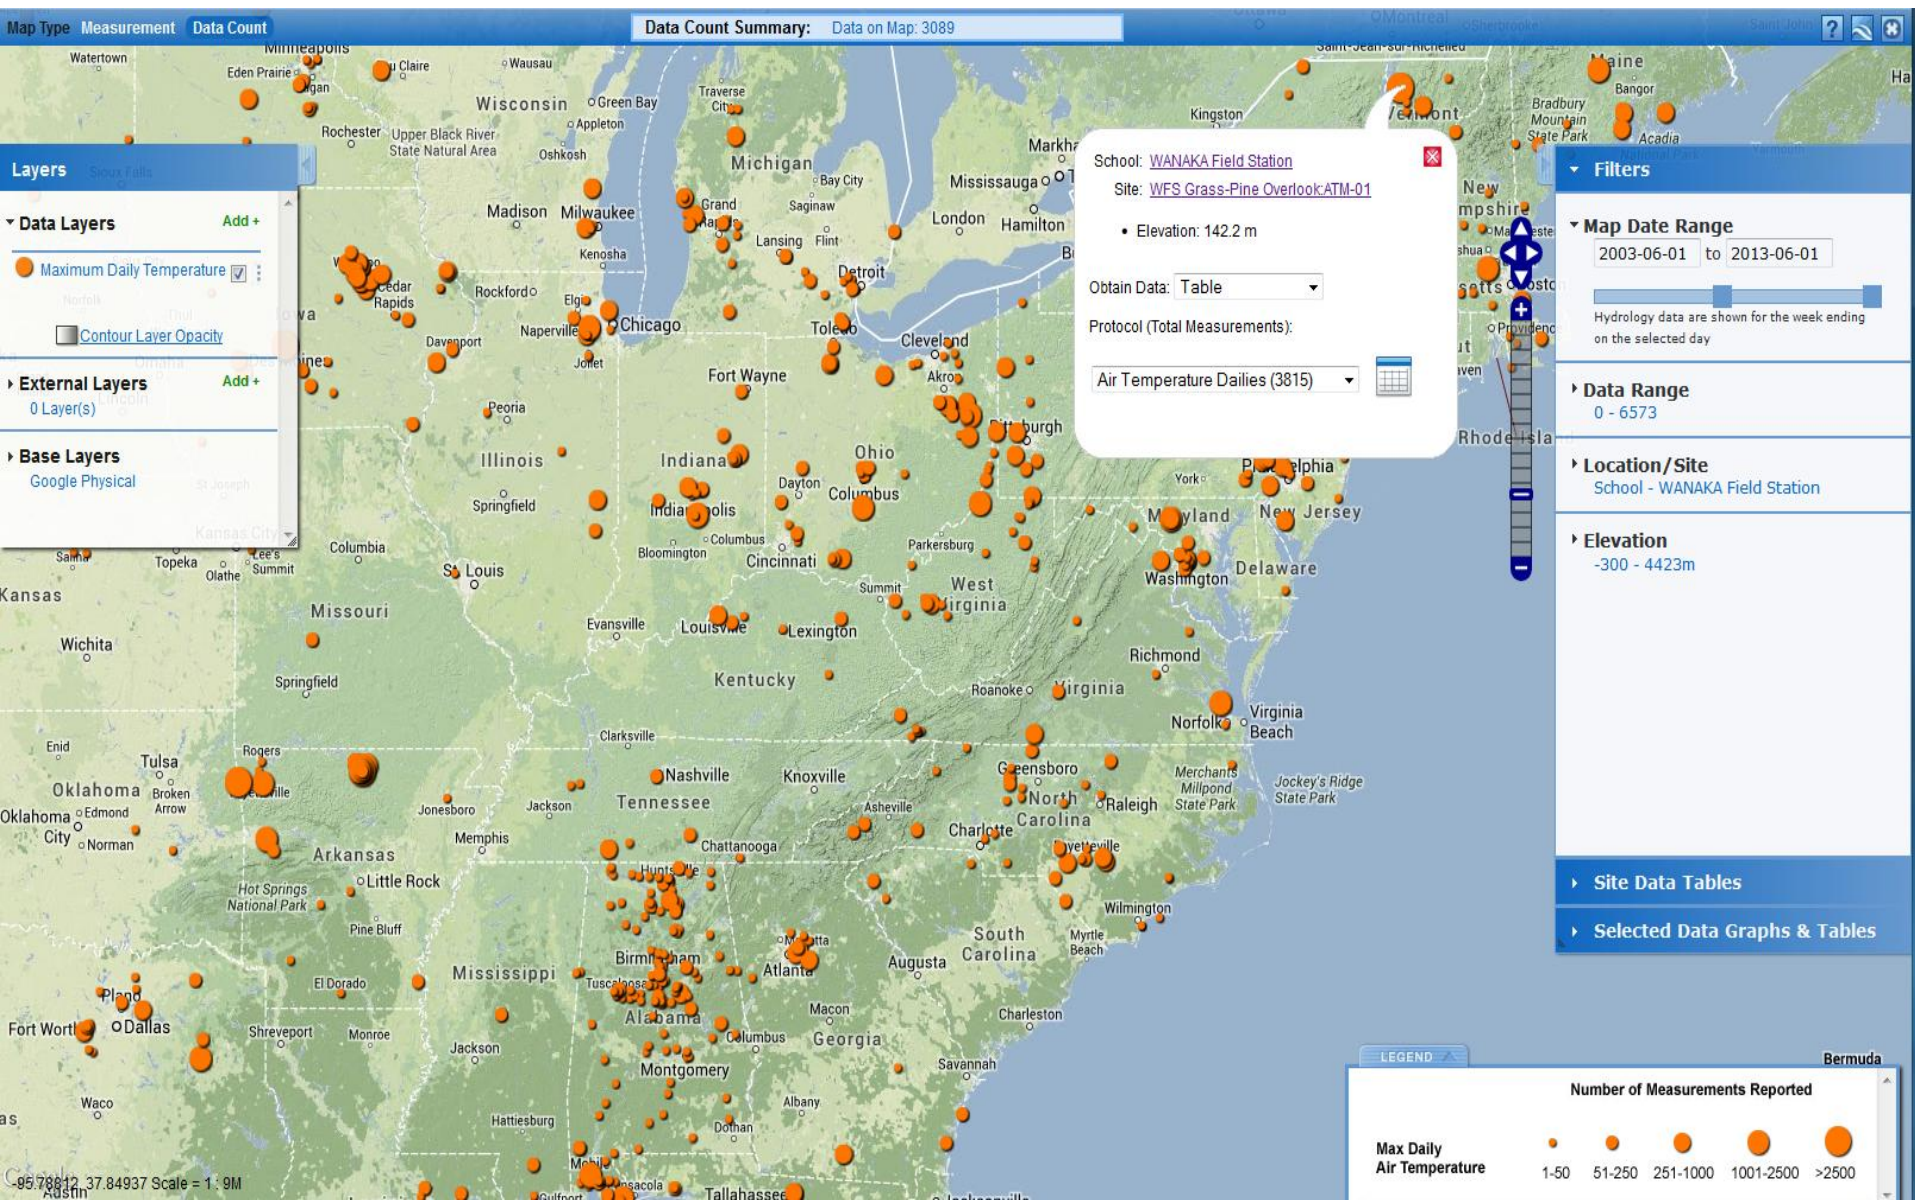

Narrowing the Map Date Range to the past 10 years and zooming in shows the spread of GLOBE measurements and where there are sites with larger datasets.

These sites offer better possibilities for study in research projects.

To make the Filters box easier to use, drag the bottom down to make it larger.

Clicking on an icon on the Map opens a site pop-up box.
The pop-up box contains links to details about the school and the site, a list of all data types collected at the site and other controls.

This box gives information about the site and is the gateway to creating tables and plots of site data.

The school and site name

Site data values

A drop down menu for choosing **Table** or **Time Series Plot**

School: [WANAKA Field Station](#)

Site: [WFS Grass-Pine Overlook:ATM-01](#)

Elevation: 142.2 m

Obtain Data:

Protocol (Total Measurements):

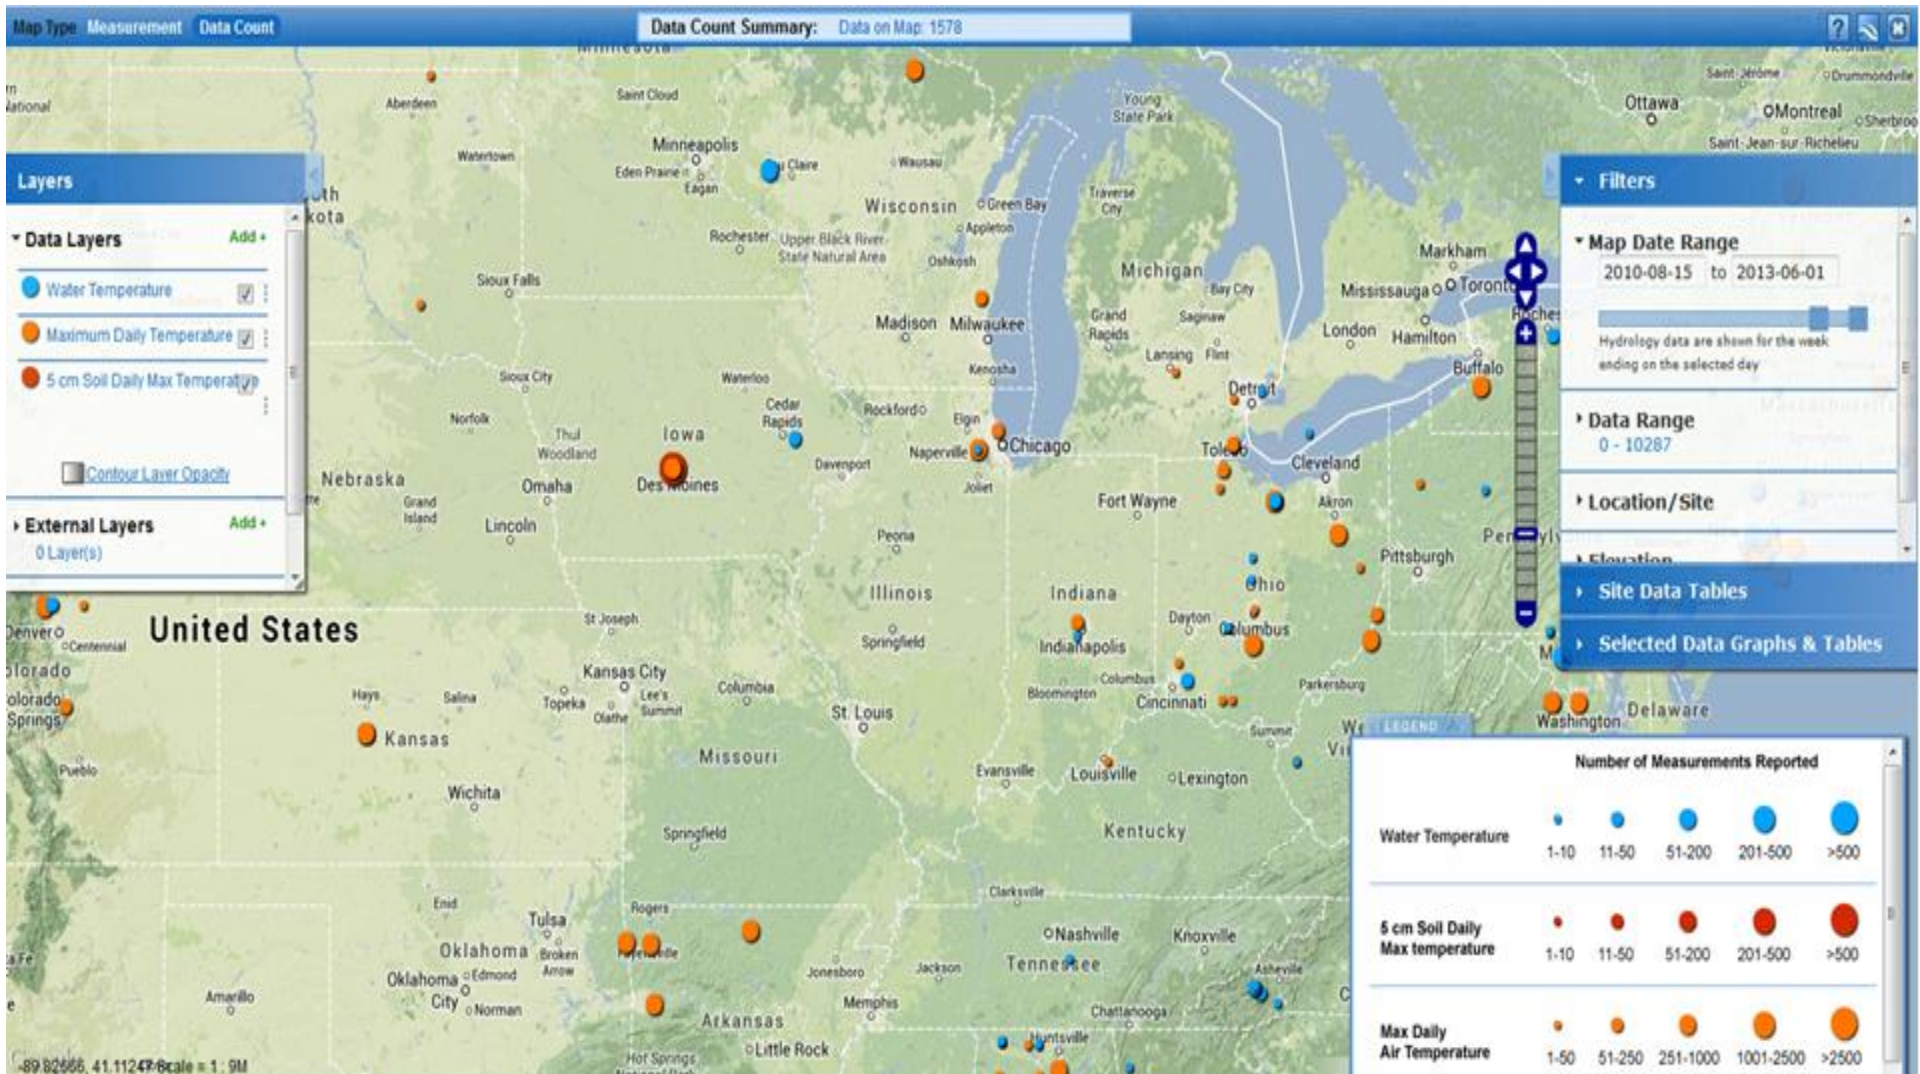

A drop down menu for choosing which type of data to plot or tabulate

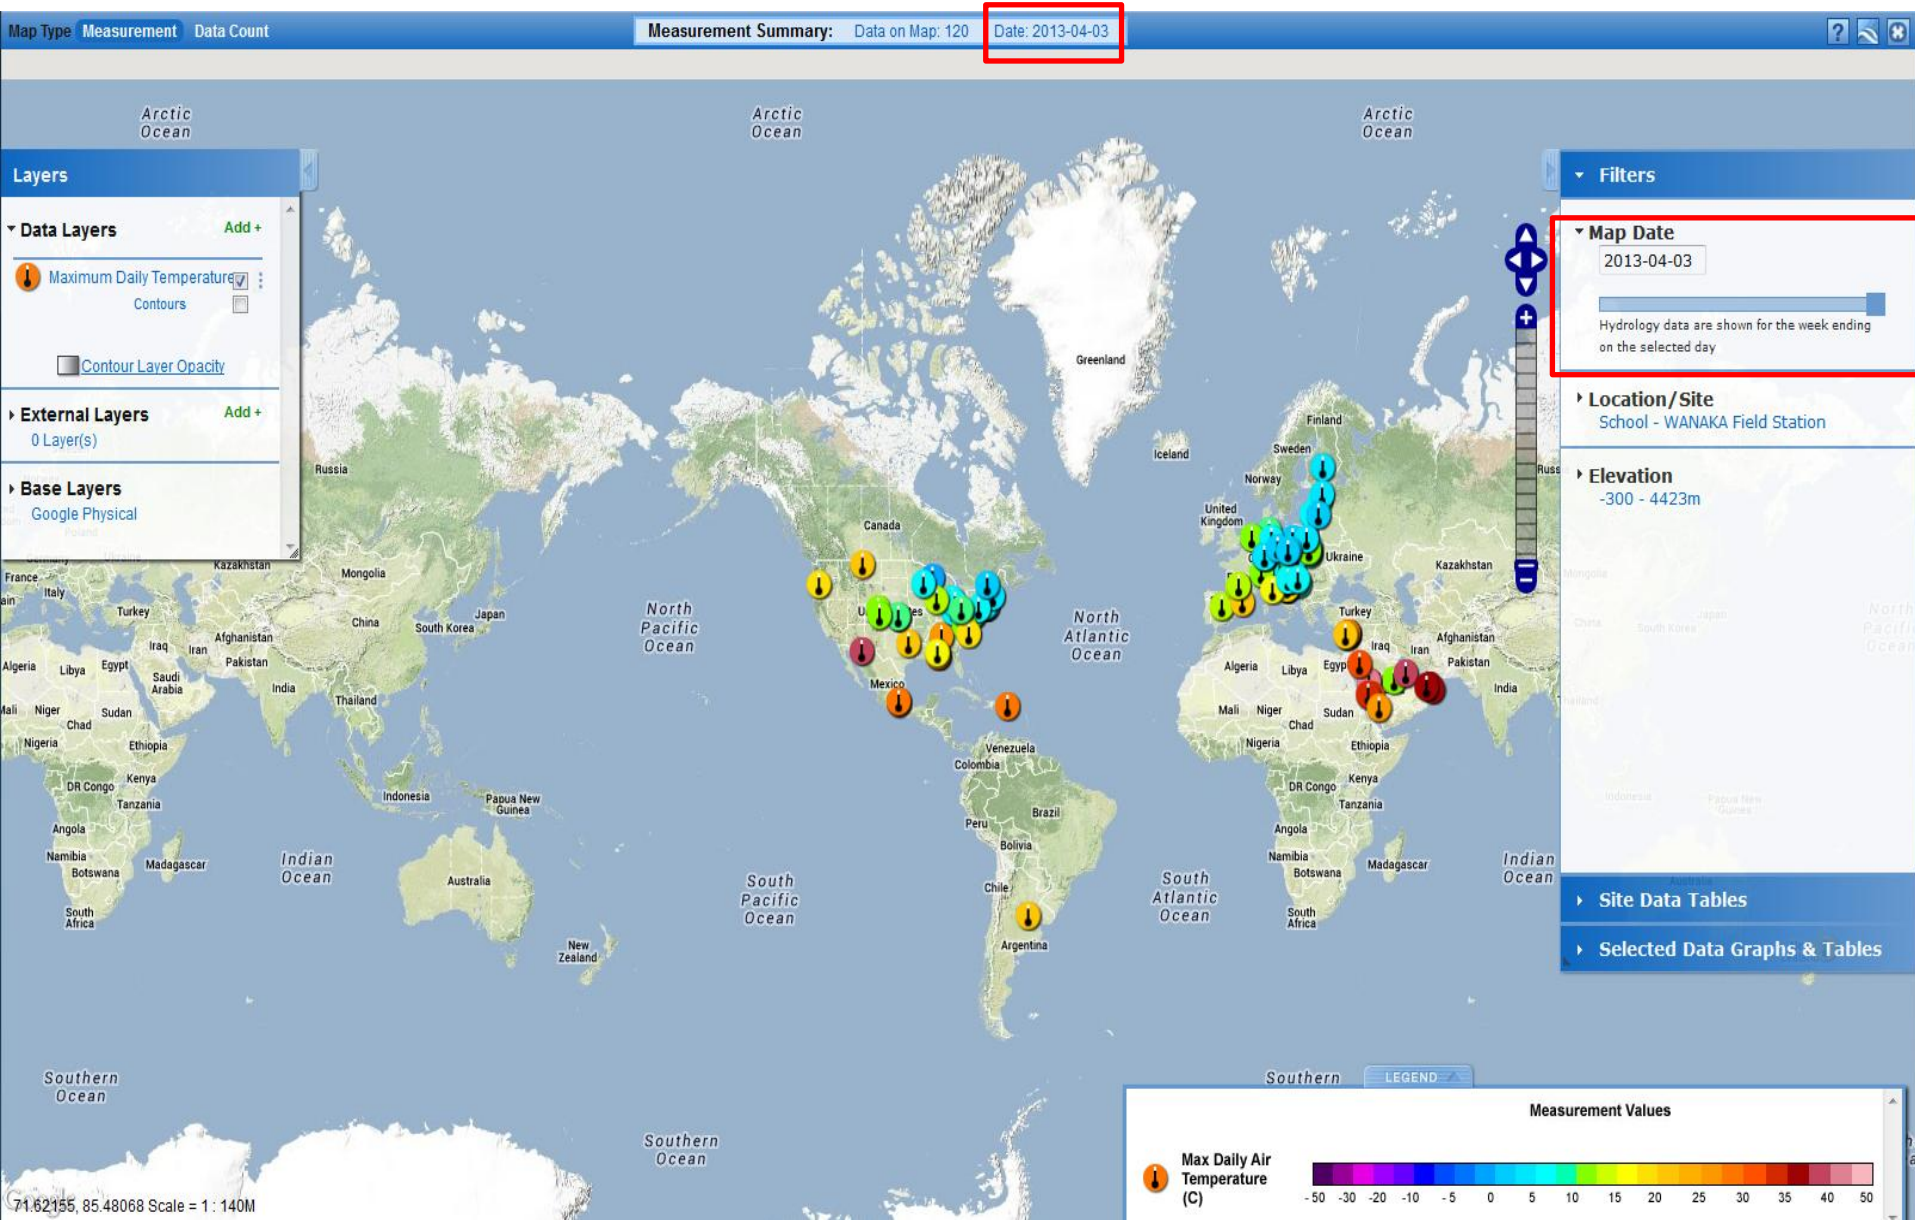

A table or plot button. Click to add this site and data type to the options for tables and plots.

The choice of **data type** is not limited to visible map **Data Layer**.
The total number of measurements is given in parentheses after the name of each data type.

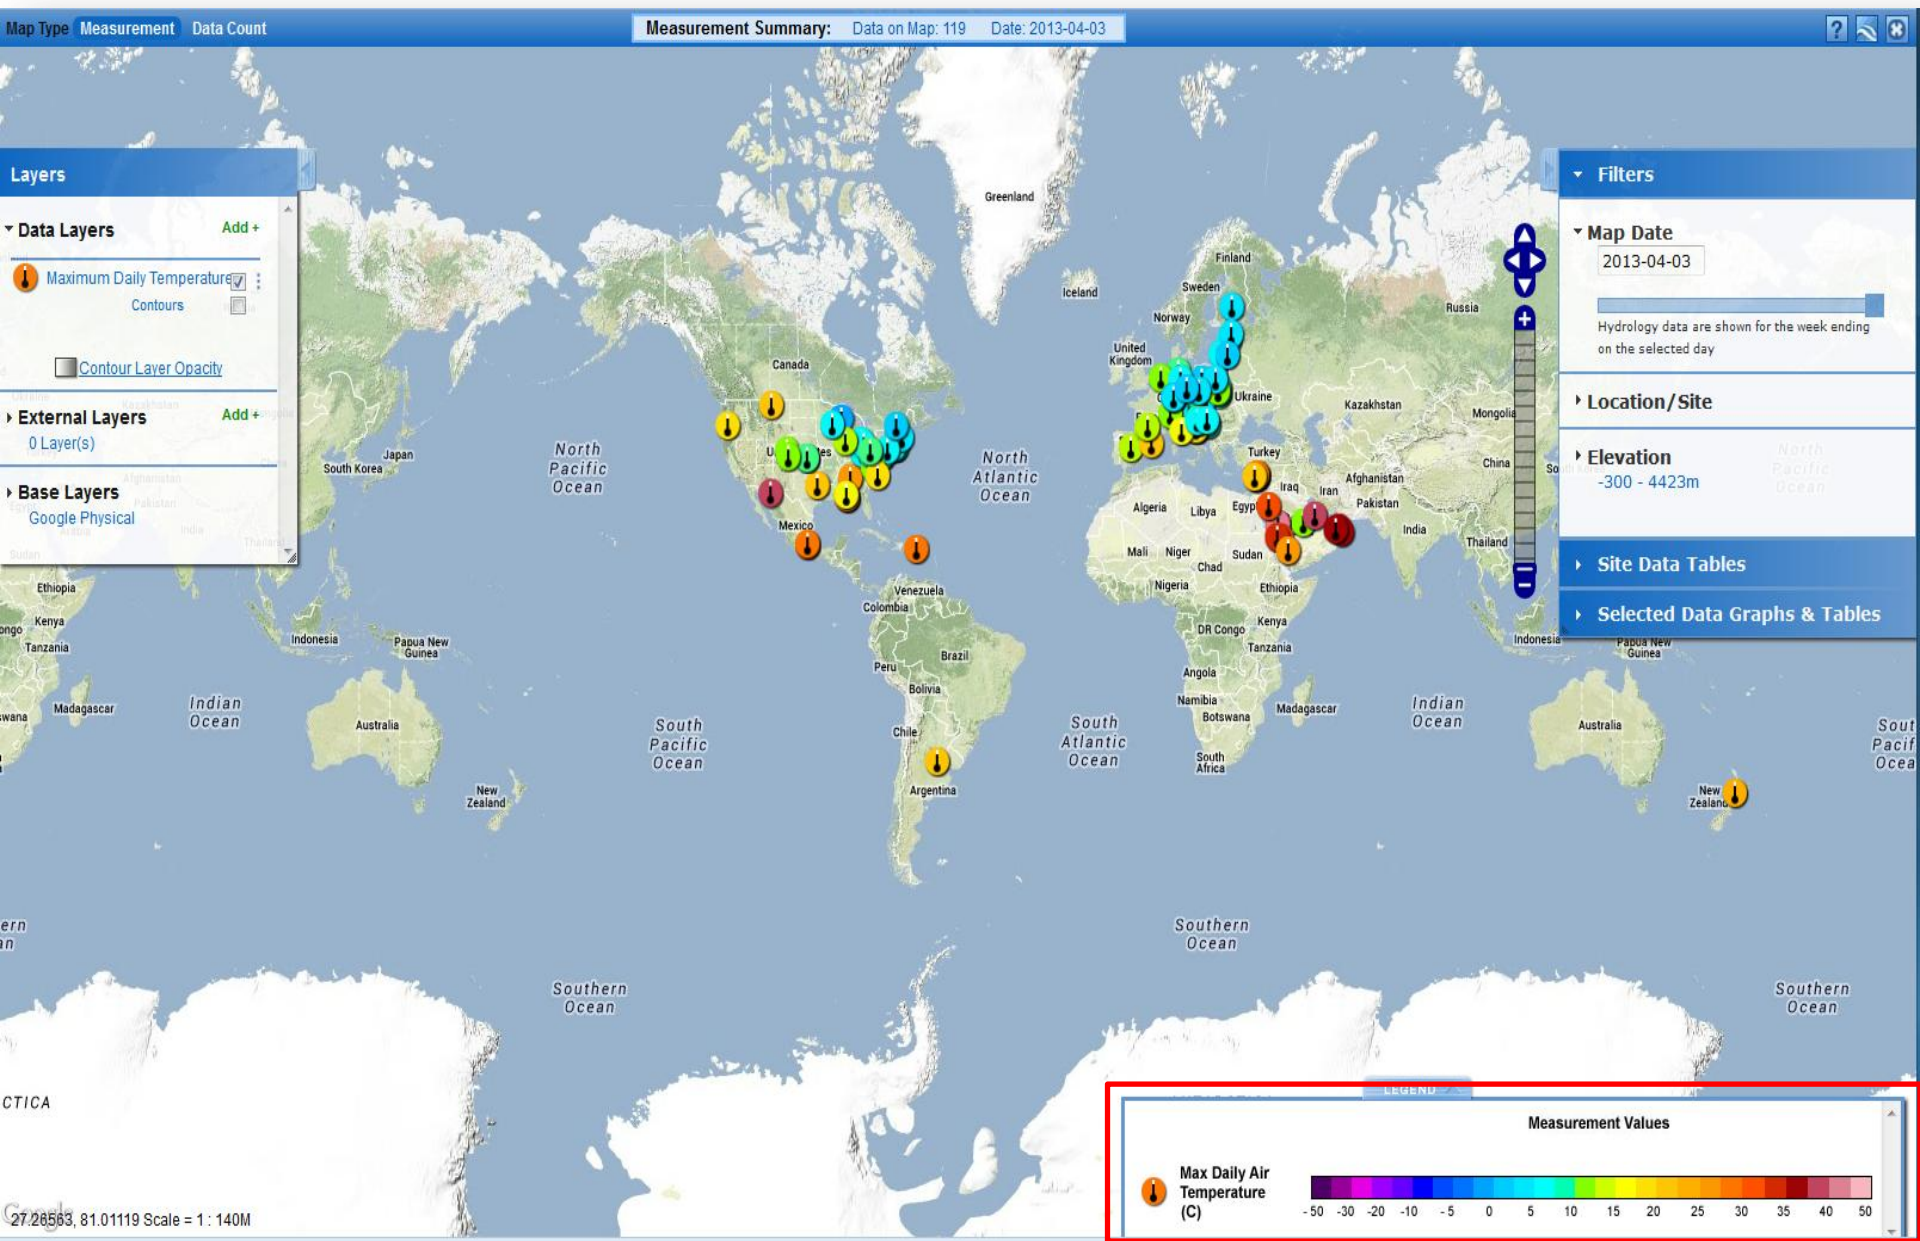

Additional data layers can be added to find locations with multiple types of data.
Using layers and the filter tool you can find a data set to meet just about any investigation need.

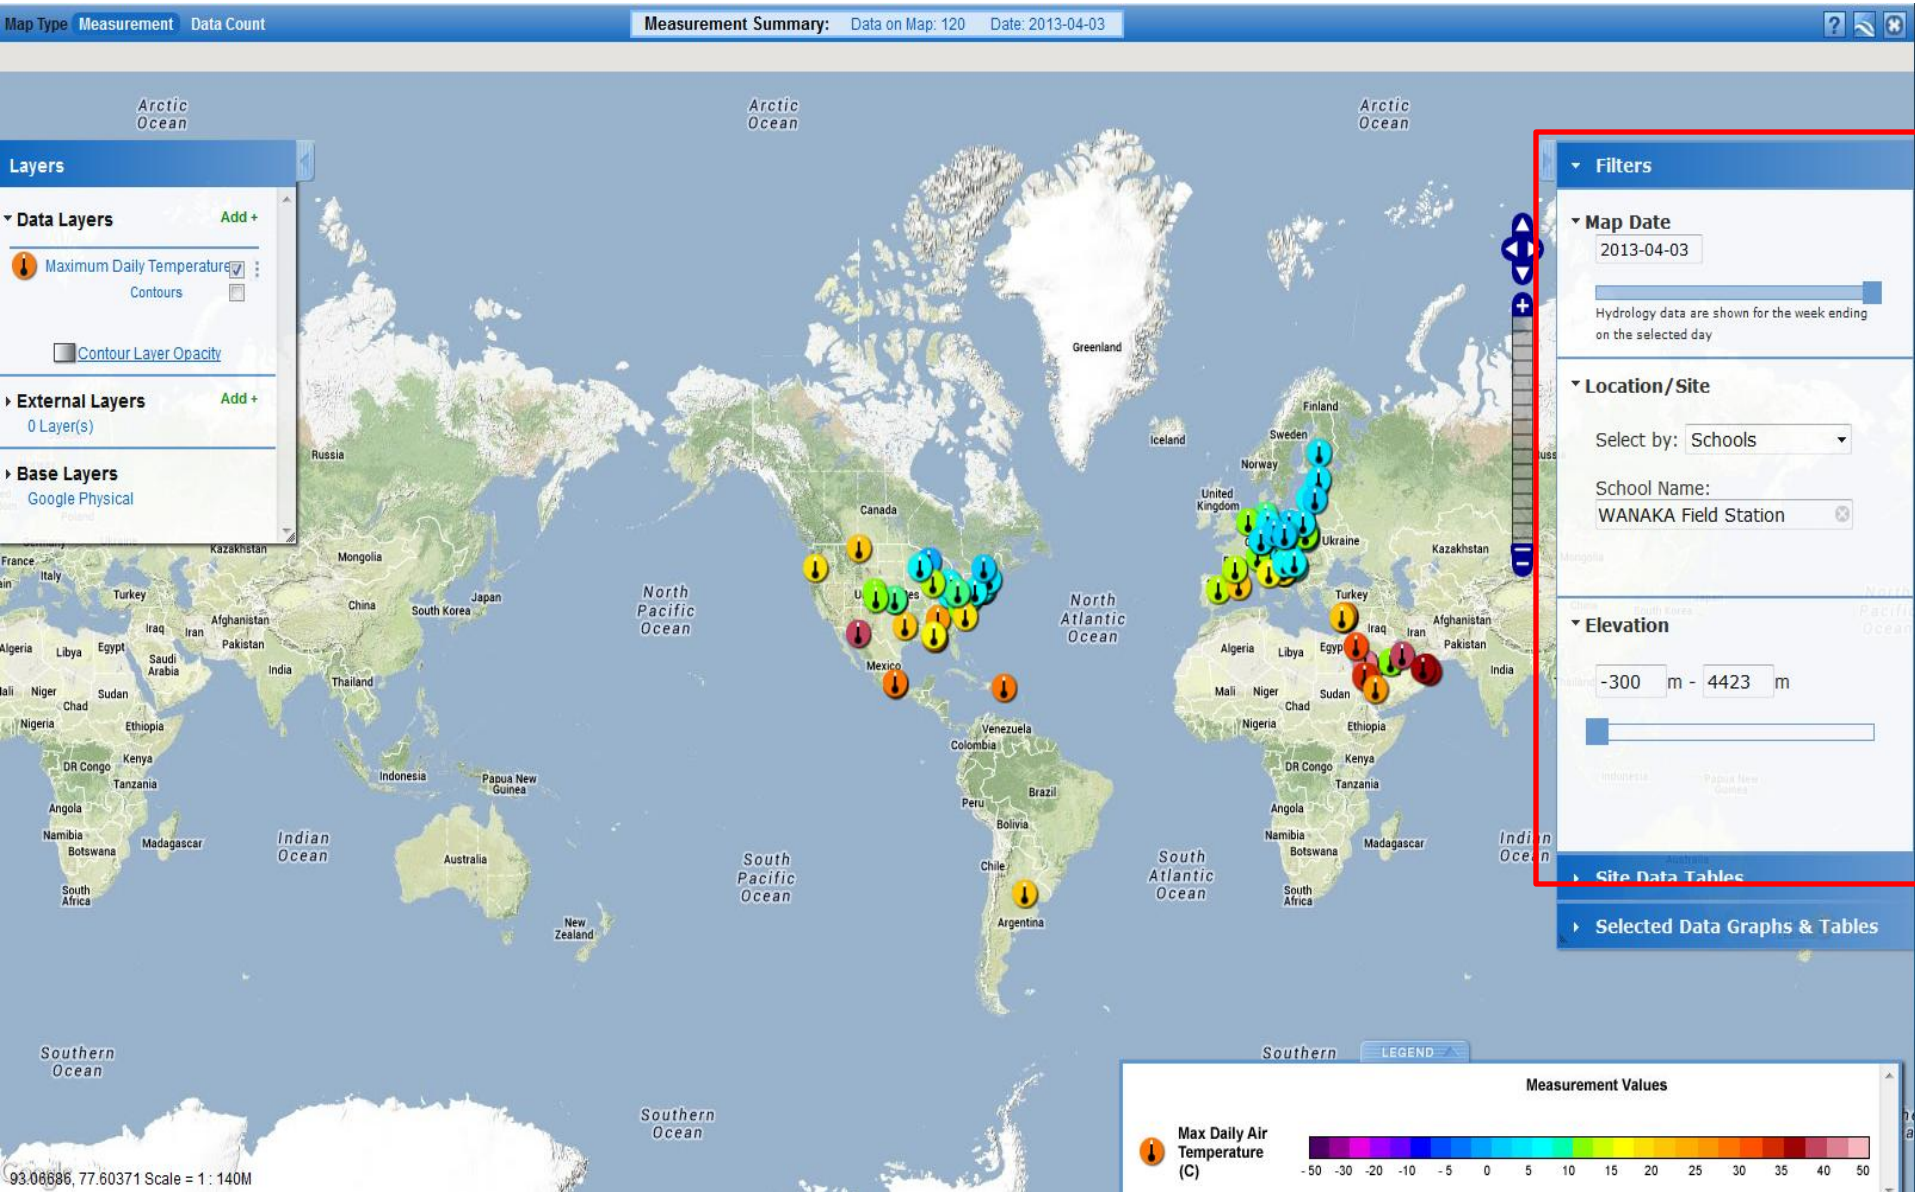

Now, let's focus on maps of measurements. Zoom out and click on Map Type **Measurement**. Now the map shows actual values of maximum air temperature for one day, today's date – change date to April 3, 2013.

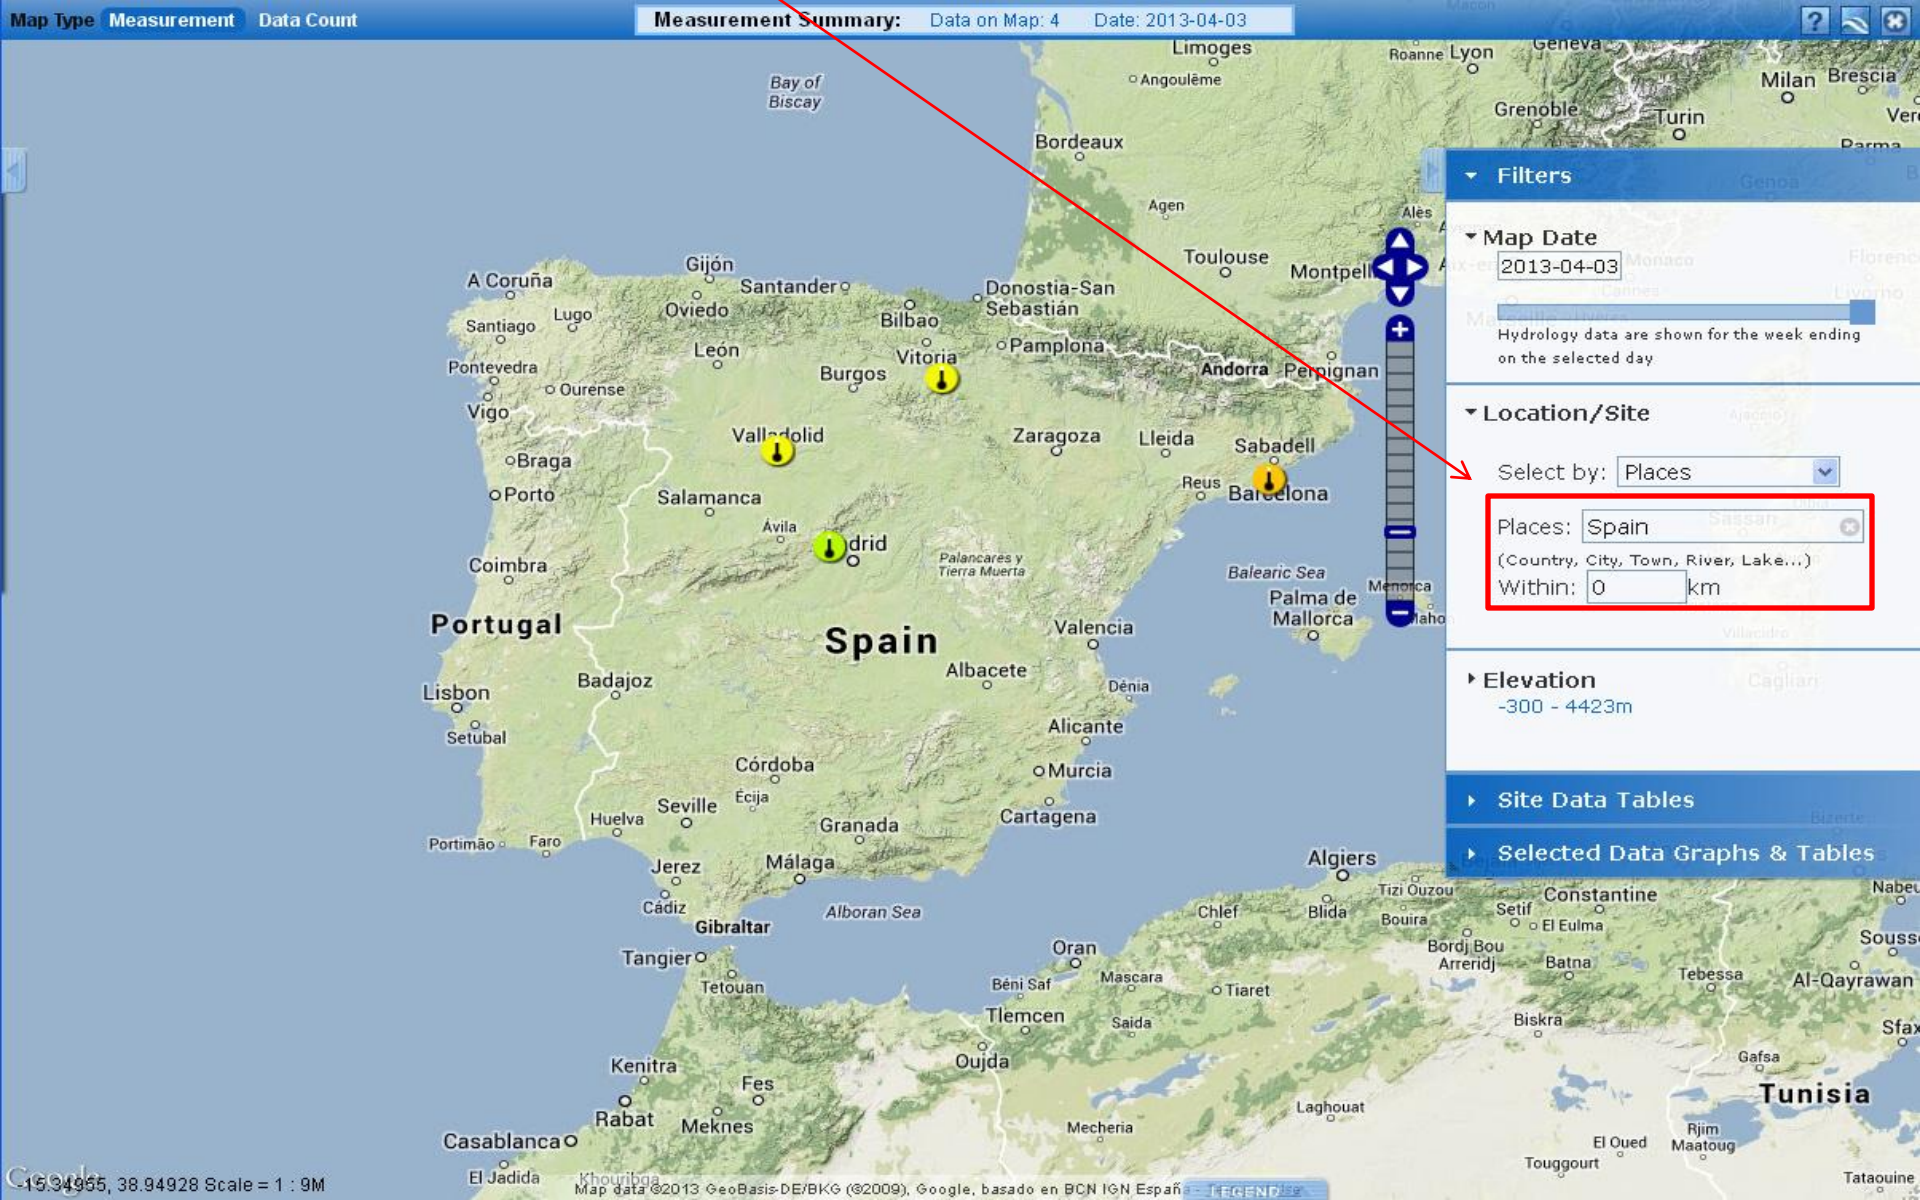

The box at the bottom right shows the legend for the data layer – the colors in the scale correspond to the possible data values for that data type. Each data layer has its own unique icon.

The Filters box is where you refine which data are shown on the map. You can control the date and limit the map to display only data at a specific location (such as a country) or at a specific elevation range.

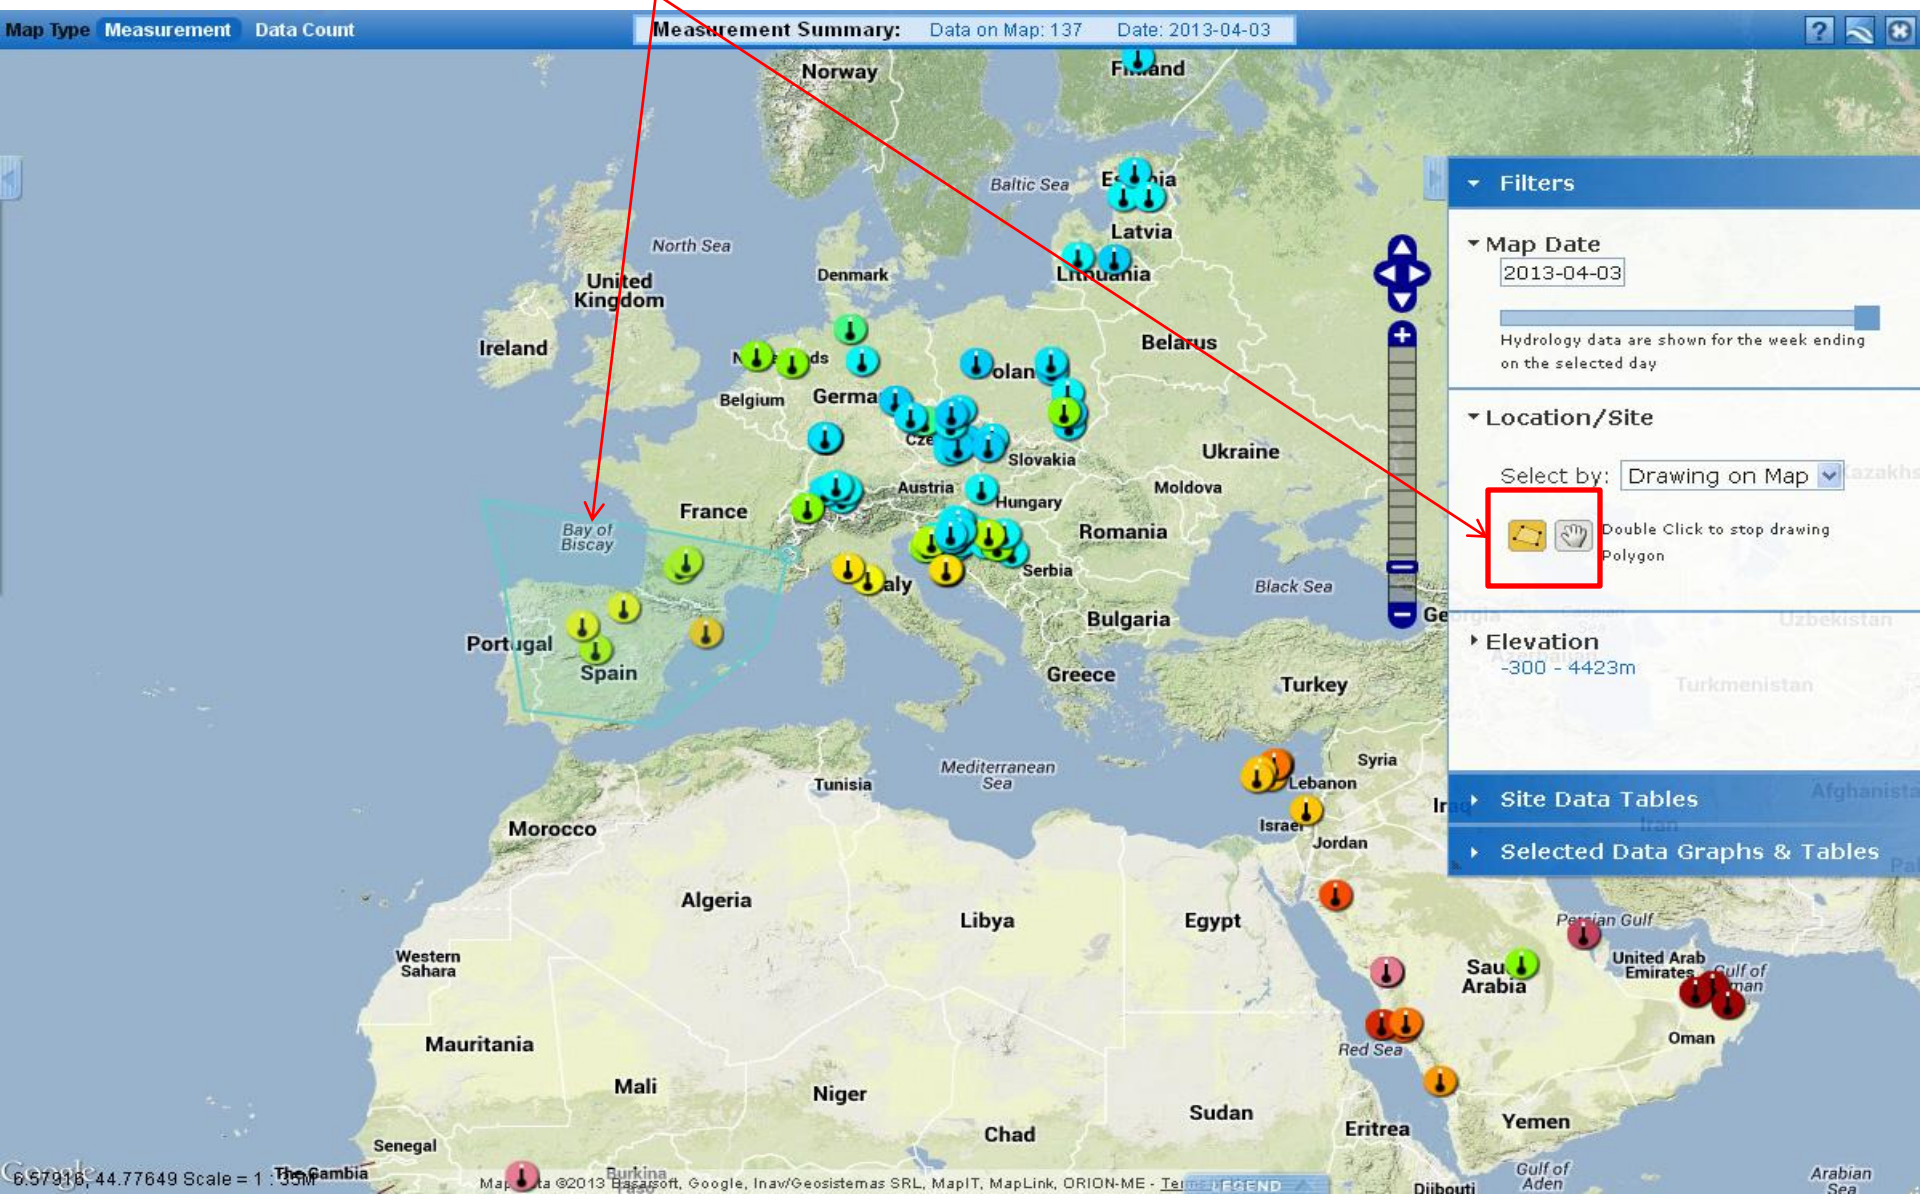

Using the filter tool, let's open the Location/Site filter and select by 'Places' and then enter in Spain. The map will zoom into the selected place and only display sites in the location

You can also filter data sites using the 'Drawing on Map' option. This allows you to select sites by drawing a polygon around the sites you want to isolate. This can be useful for viewing only those sites that are on the map in a table view.

Click the hand icon to exit the draw tool.

Let's now search for a particular school and site. Type in 'Lowrey ' in the school field. The system should auto-complete to show a list of schools that start with that name. Select Lowrey Elementary School. The icon is a small red dot which indicates no data from the added data layers was entered on the current map date.

The screenshot displays a web-based map application interface. The top navigation bar includes 'Map Type', 'Measurement', and 'Data Count'. A 'Measurement Summary' box shows 'Data on Map: 138' and 'Date: 2013-04-03'. The map shows a large area of the central US, including parts of Kansas, Missouri, Oklahoma, Arkansas, and Texas. A red dot is visible on the map near the border of Oklahoma and Texas, indicating a location with no data.

Layers Panel (Left):

- Data Layers:** Includes 'Maximum Daily Temperature' (checked) and 'Contour Layer Opacity'.
- External Layers:** Shows '0 Layer(s)'.
- Base Layers:** Includes 'Google Physical'.

Filters Panel (Right):

- Map Date:** Set to '2013-04-03'. A note states: 'Hydrology data are shown for the week ending on the selected day'.
- Location/Site:** 'Select by:' is set to 'Schools'. The 'School Name' field contains 'Lowrey Elementary School' (highlighted with a red box). The 'Sites' dropdown is set to 'Lowrey School Digital'.
- Elevation:** Range is '-300 - 4423m'.
- Site Data Tables:** A link to view site data tables.
- Selected Data Graphs & Tables:** A link to view selected data graphs and tables.

Information Window (Bottom Center):

- School:** [Lowrey Elementary School](#)
- Site:** [Lowrey School Digital Thermometer.ATM-01](#)
- Obtain Data:** Set to 'Table'.
- Protocol (Total Measurements):** Set to 'Air Temperature Dailies (5571)'.

The map shows major cities like Kansas City, Wichita, Tulsa, and Dallas. A red arrow points from the text in the first block to the red dot on the map.

Click on the Lowrey Elementary School link to get school information and a list of school sites.
Close the window and remove Lowrey school from the place filter.

Map Type Measurement Data Count Measurement Summary: Data on Map: 138 Date: 2013-04-03

School Information

School Information

Closing the pop-out boxes let's one see any data points they may be hiding.

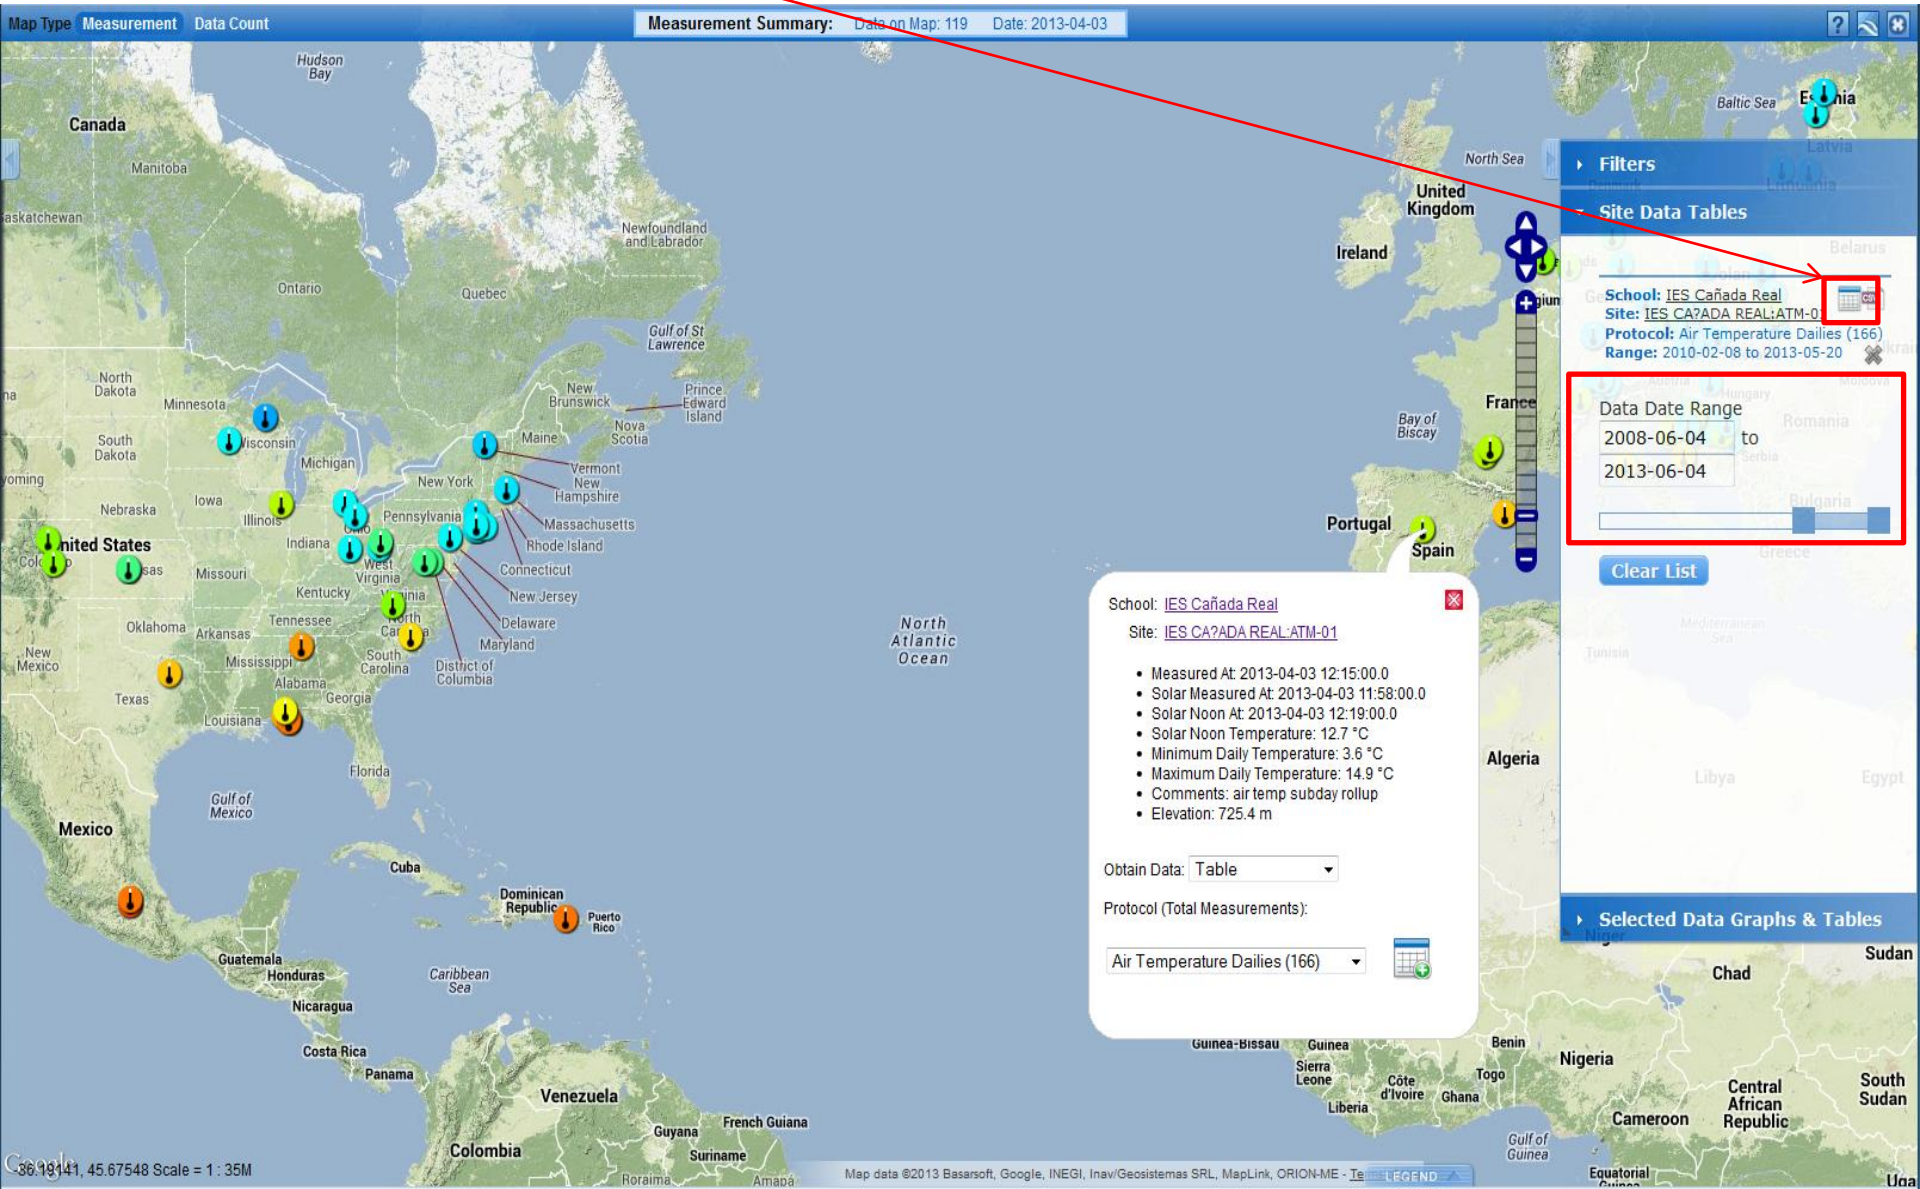

Click on a point on the Map to open the site pop-up box.

To view data in a table, click on the **Table** button in the site info window to add the site to the **Site Data Tables** section of the right hand pop-open box

Select the range of dates you wish to be included in the data table.
Move the sliders or enter the specific start and end dates.
Click on the **Table** button next to the school name to produce the table.

Note that this table gives values for local solar noon and minimum and maximum daily temperature. Clicking the button at the bottom will export the data in comma delimited format.

IES Cañada Real : IES CA?ADA REAL:ATM-01 Data Table			
Measured At	Solar Noon Temperature (°C)	Minimum Daily Temperature (°C)	Maximum Daily Temperature (°C)
2013-05-20 12:15:00	11.4	5.4	15

2013-04-24 12:15:00	20.2	6.9	20.3
 Export .csv			

Now let's make a plot of the data from this same site.
Note that it was necessary to scroll down to see the choices.

Time Series Plot has been selected.

You must choose which dataset to plot from a drop down menu. Note that you can choose other sets of atmosphere data and not just Air Temperature Dailies.

Select one of the options from the list.

Portugal Spain

- Measured At: 2013-04-03 12:15:00.0
- Solar Measured At: 2013-04-03 11:58:00.0
- Solar Noon At: 2013-04-03 12:19:00.0
- Solar Noon Temperature: 12.7 °C
- Minimum Daily Temperature: 3.6 °C
- Maximum Daily Temperature: 14.9 °C
- Comments: air temp subday rollup
- Elevation: 725.4 m

Obtain Data: Time Series Plot

Protocol (Total Measurements):

Air Temperature Dailies (166)

☐ Solar Noon Temperature

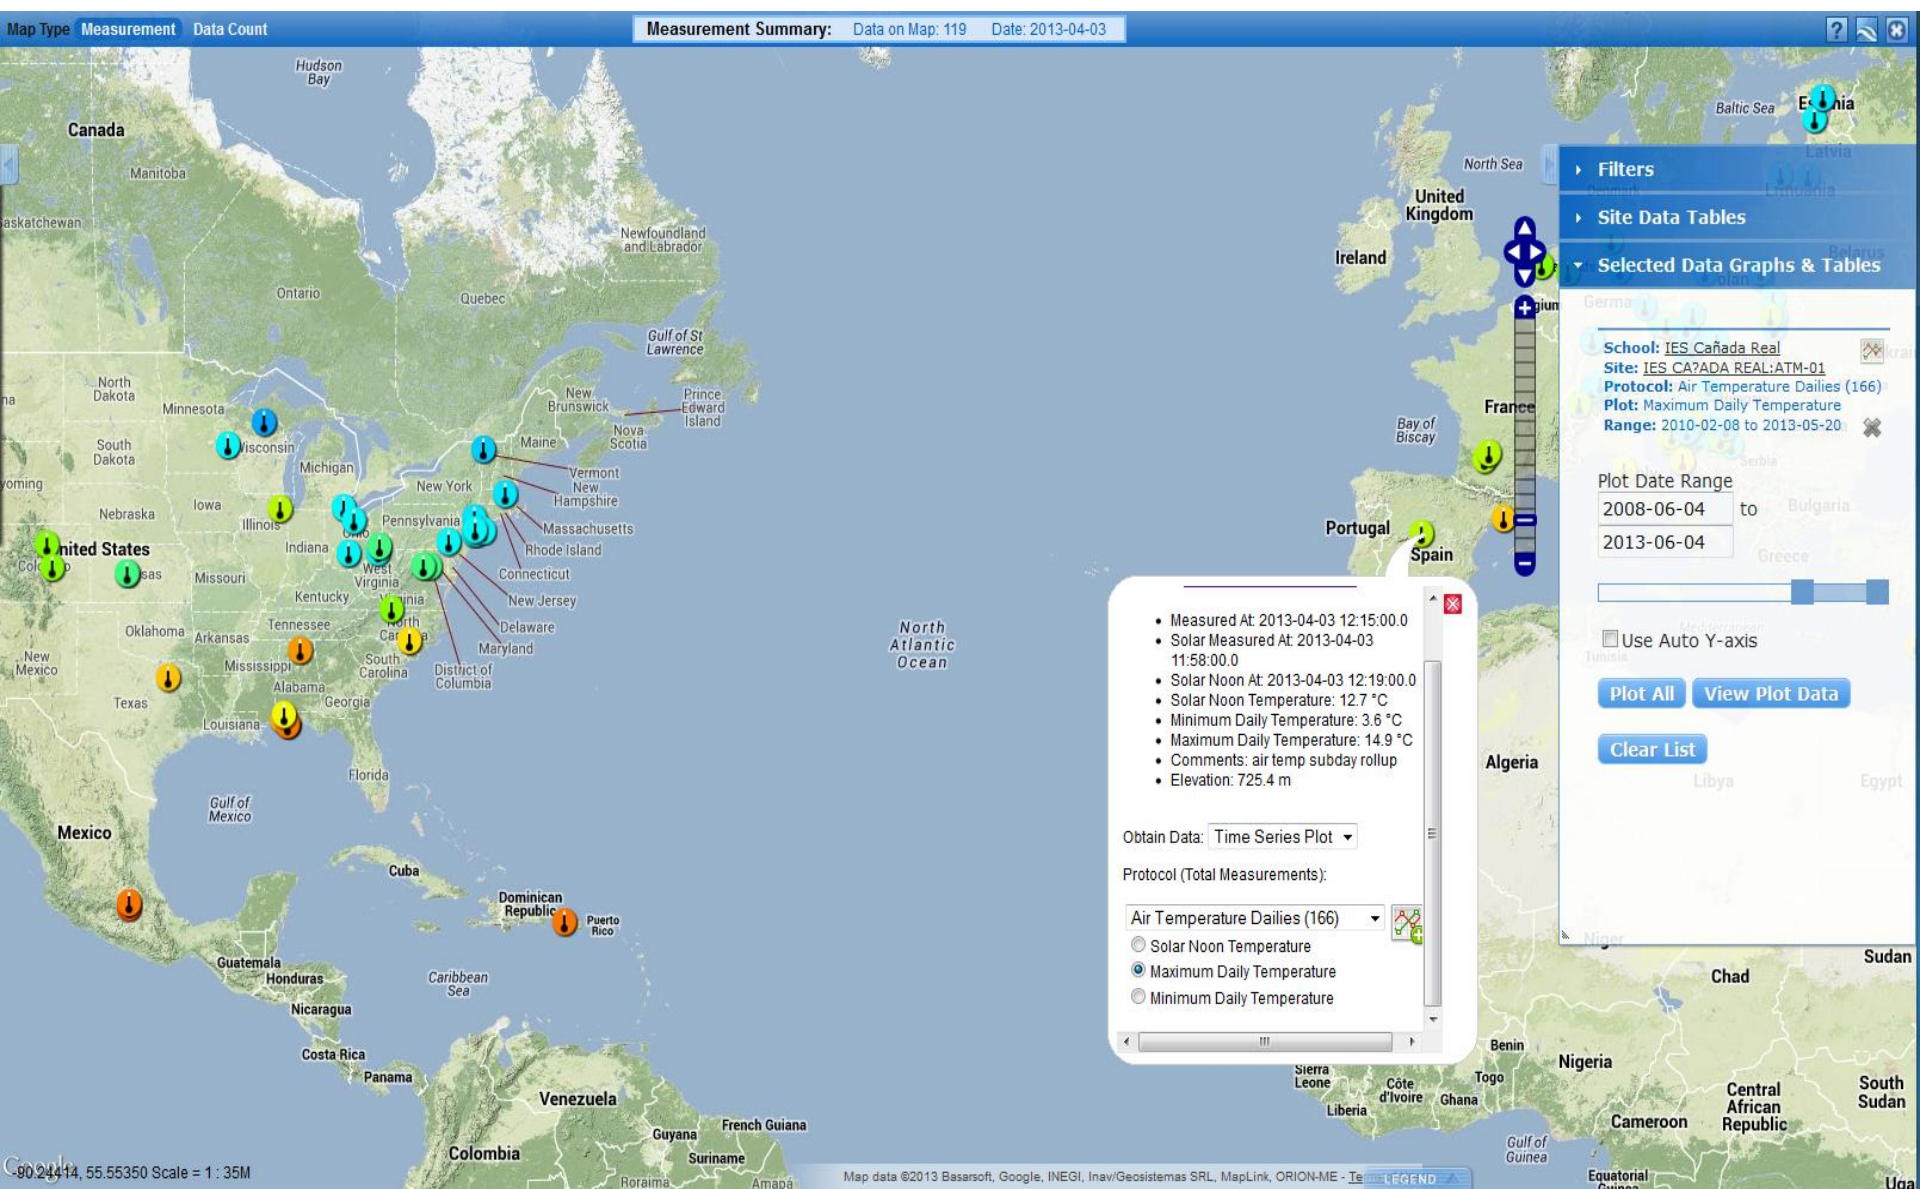

☐ Maximum Daily Temperature

☐ Minimum Daily Temperature

Sierra

When you have made your selection, click on the plot button.

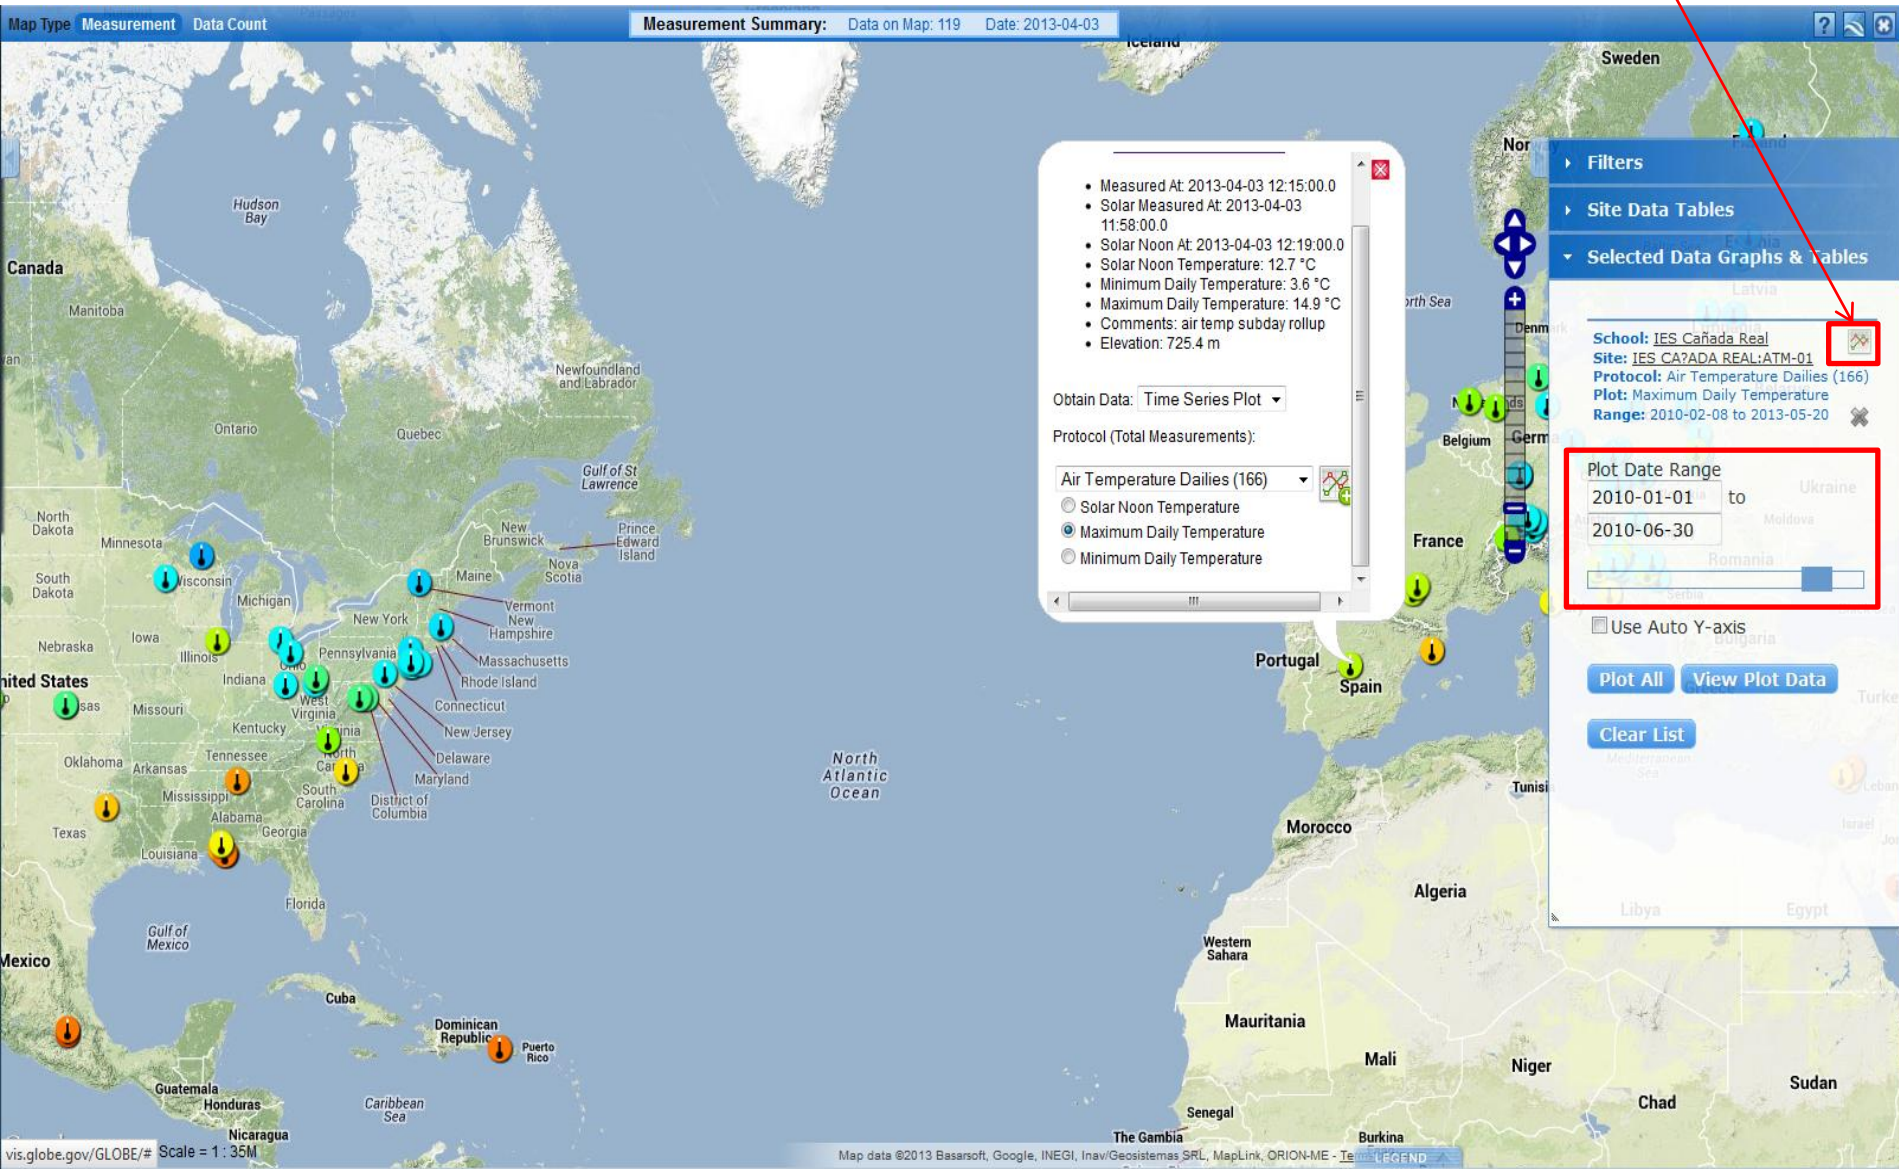

Clicking on the **Plot** button adds the site to the plot list and opens the **Selected Data Graphs & Tables** section of the right pop-open box.

Now select the range of dates to plot; January – June 2010 has been selected.

Use the sliders or enter the specific start and end dates.

Click on the **plot** button next to the school name to produce the graph.

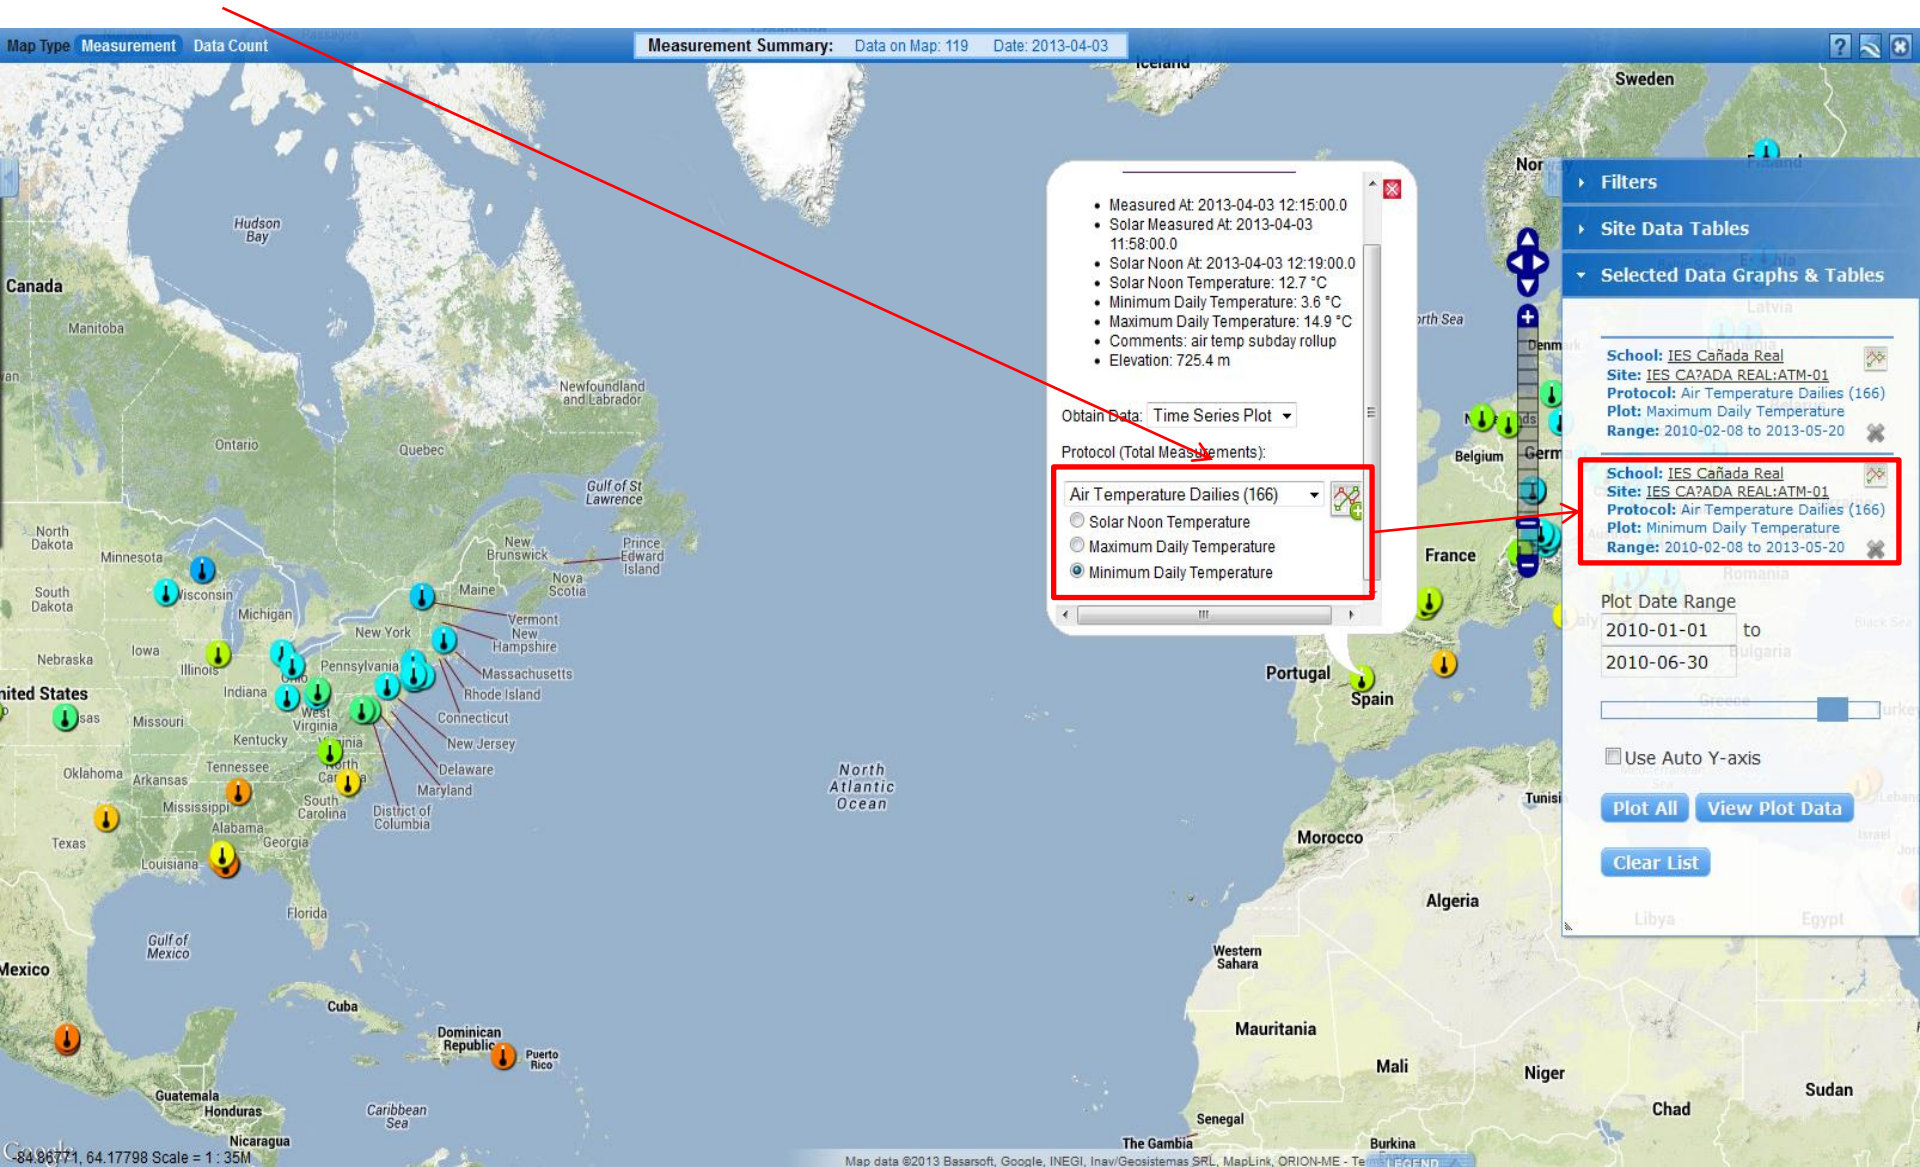

Note that the y-axis on this graph covers the full range of possible air temperature values.
When data points are for consecutive days, they are connected with a line.
Clicking the print button will print out a copy of this graph.

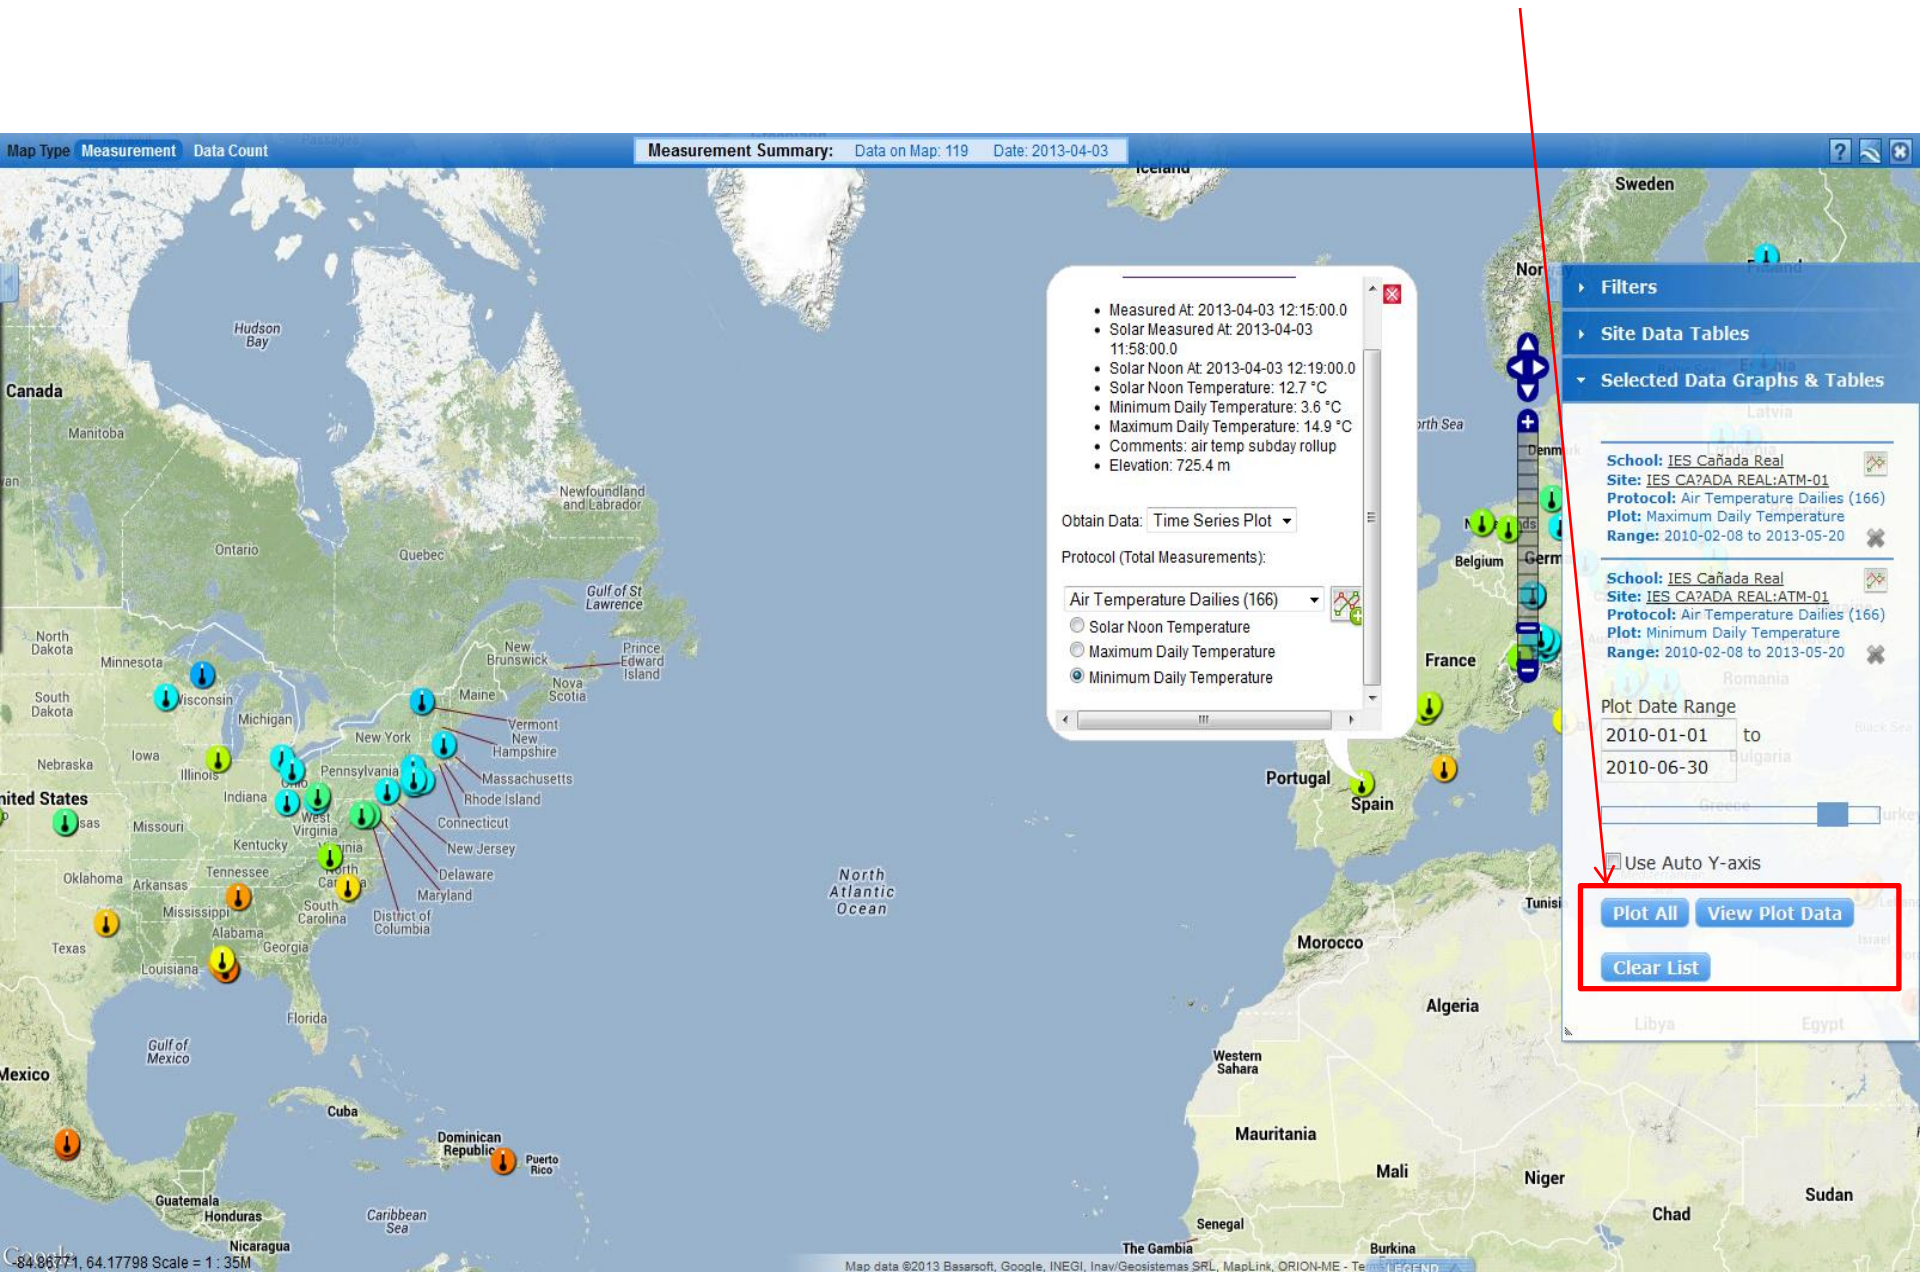

You can select additional datasets to plot.

In the pop-up box of site information, select a different dataset.

Click on the **plot** button to add this data set to the list of **Selected Data Graphs & Tables**.

With two datasets selected, you can plot them both by clicking **Plot All**.

Here is the result. A maximum of 6 datasets can be added to the plot list.

If we check the **Use Auto Y-axis** box the software adjusts the y-axes individually to spread the data vertically on the graph.

With two datasets with the same units, the result can be misleading.

Note that the minimum temperature in red is above the maximum on most days.

Filters

Site Data Tables

Selected Data Graphs & Tables

School: IES Cañada Real
Site: IES CA?ADA REAL:ATM-01
Protocol: Air Temperature Dailies (166)
Plot: Maximum Daily Temperature

Cloud Observations and other measurement types (Soil Properties, etc.) utilizes different layer sizes and colors so one can see up to 5 layers at a single site. Since different Cloud Observations can be made at the same site on the same day, layer icons can be hidden under another icon.

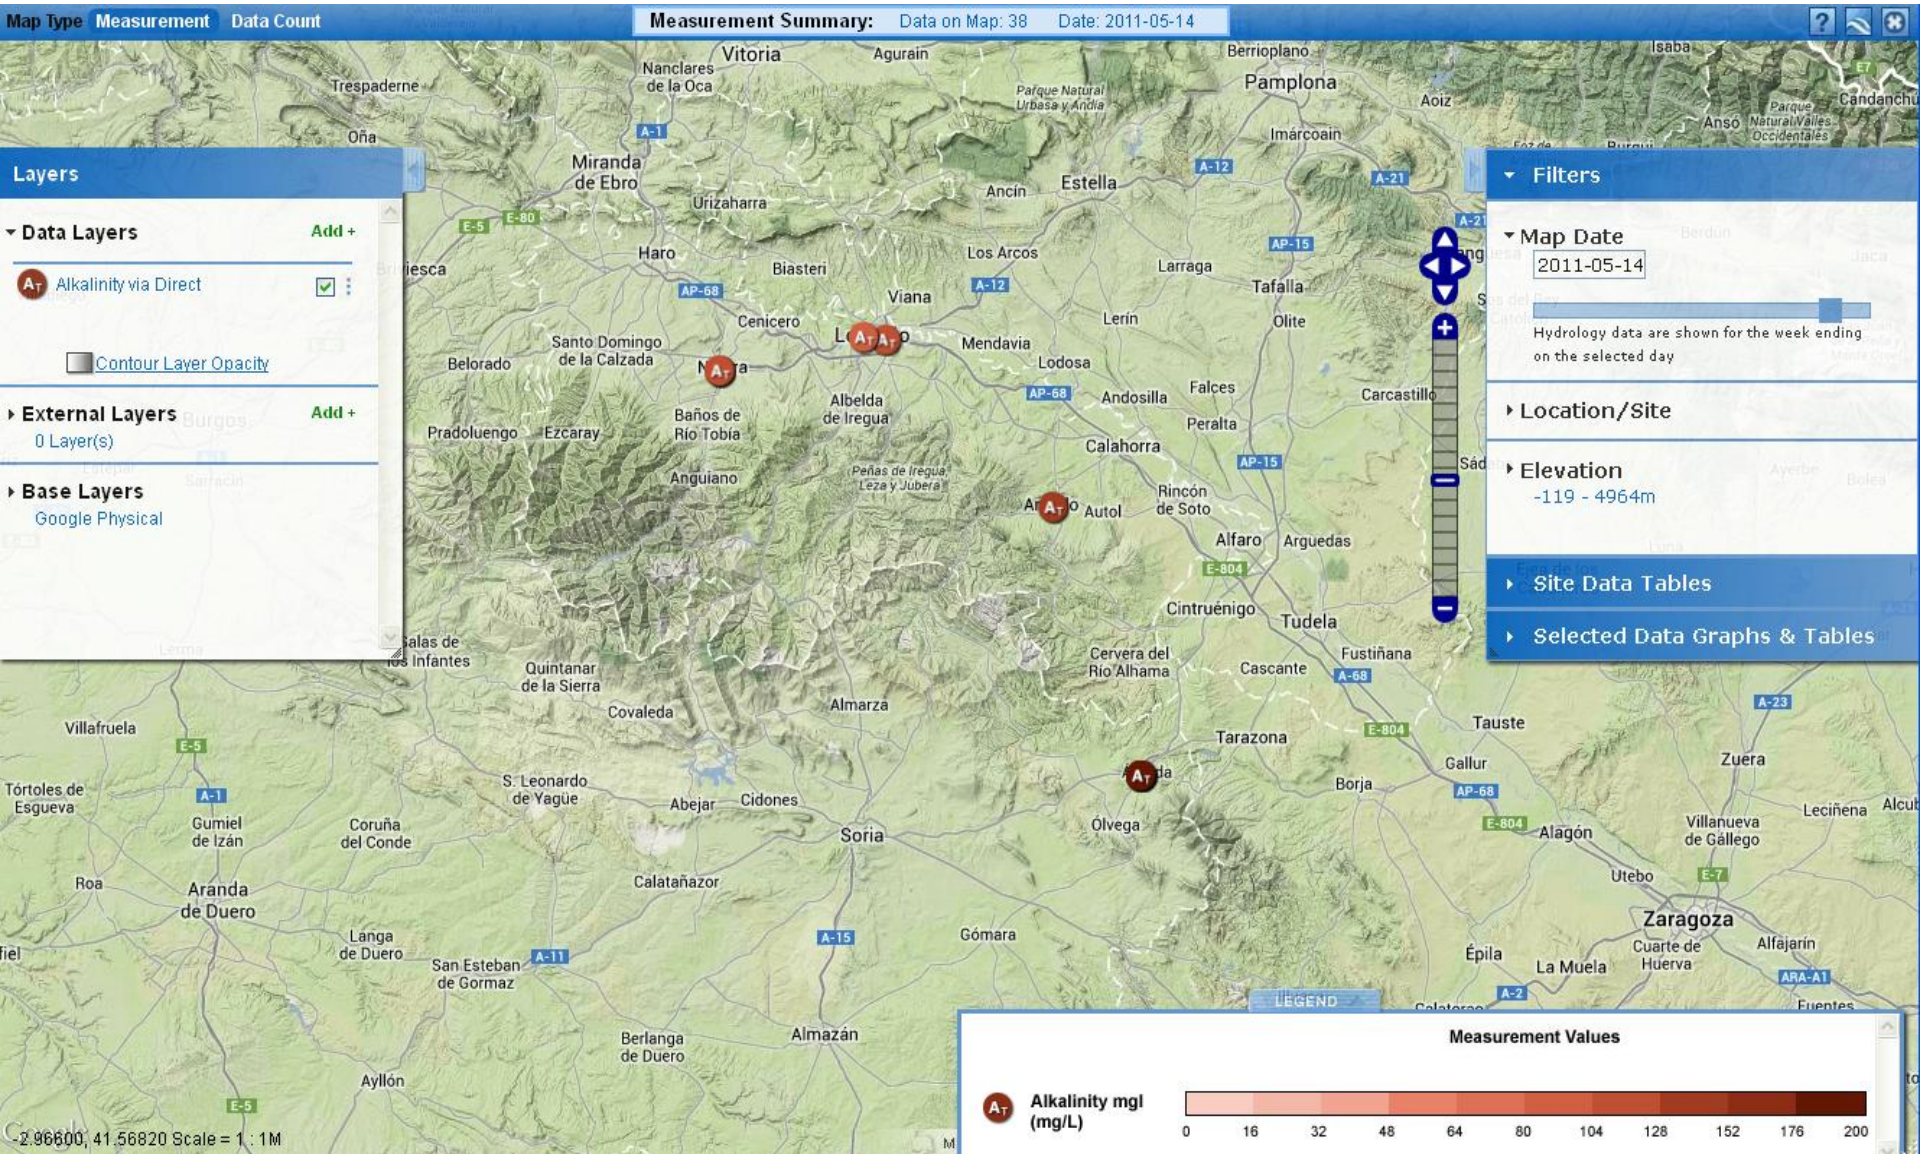

To re-order a layer, click and hold the small dots next to the add button. Now drag the layer to the new position

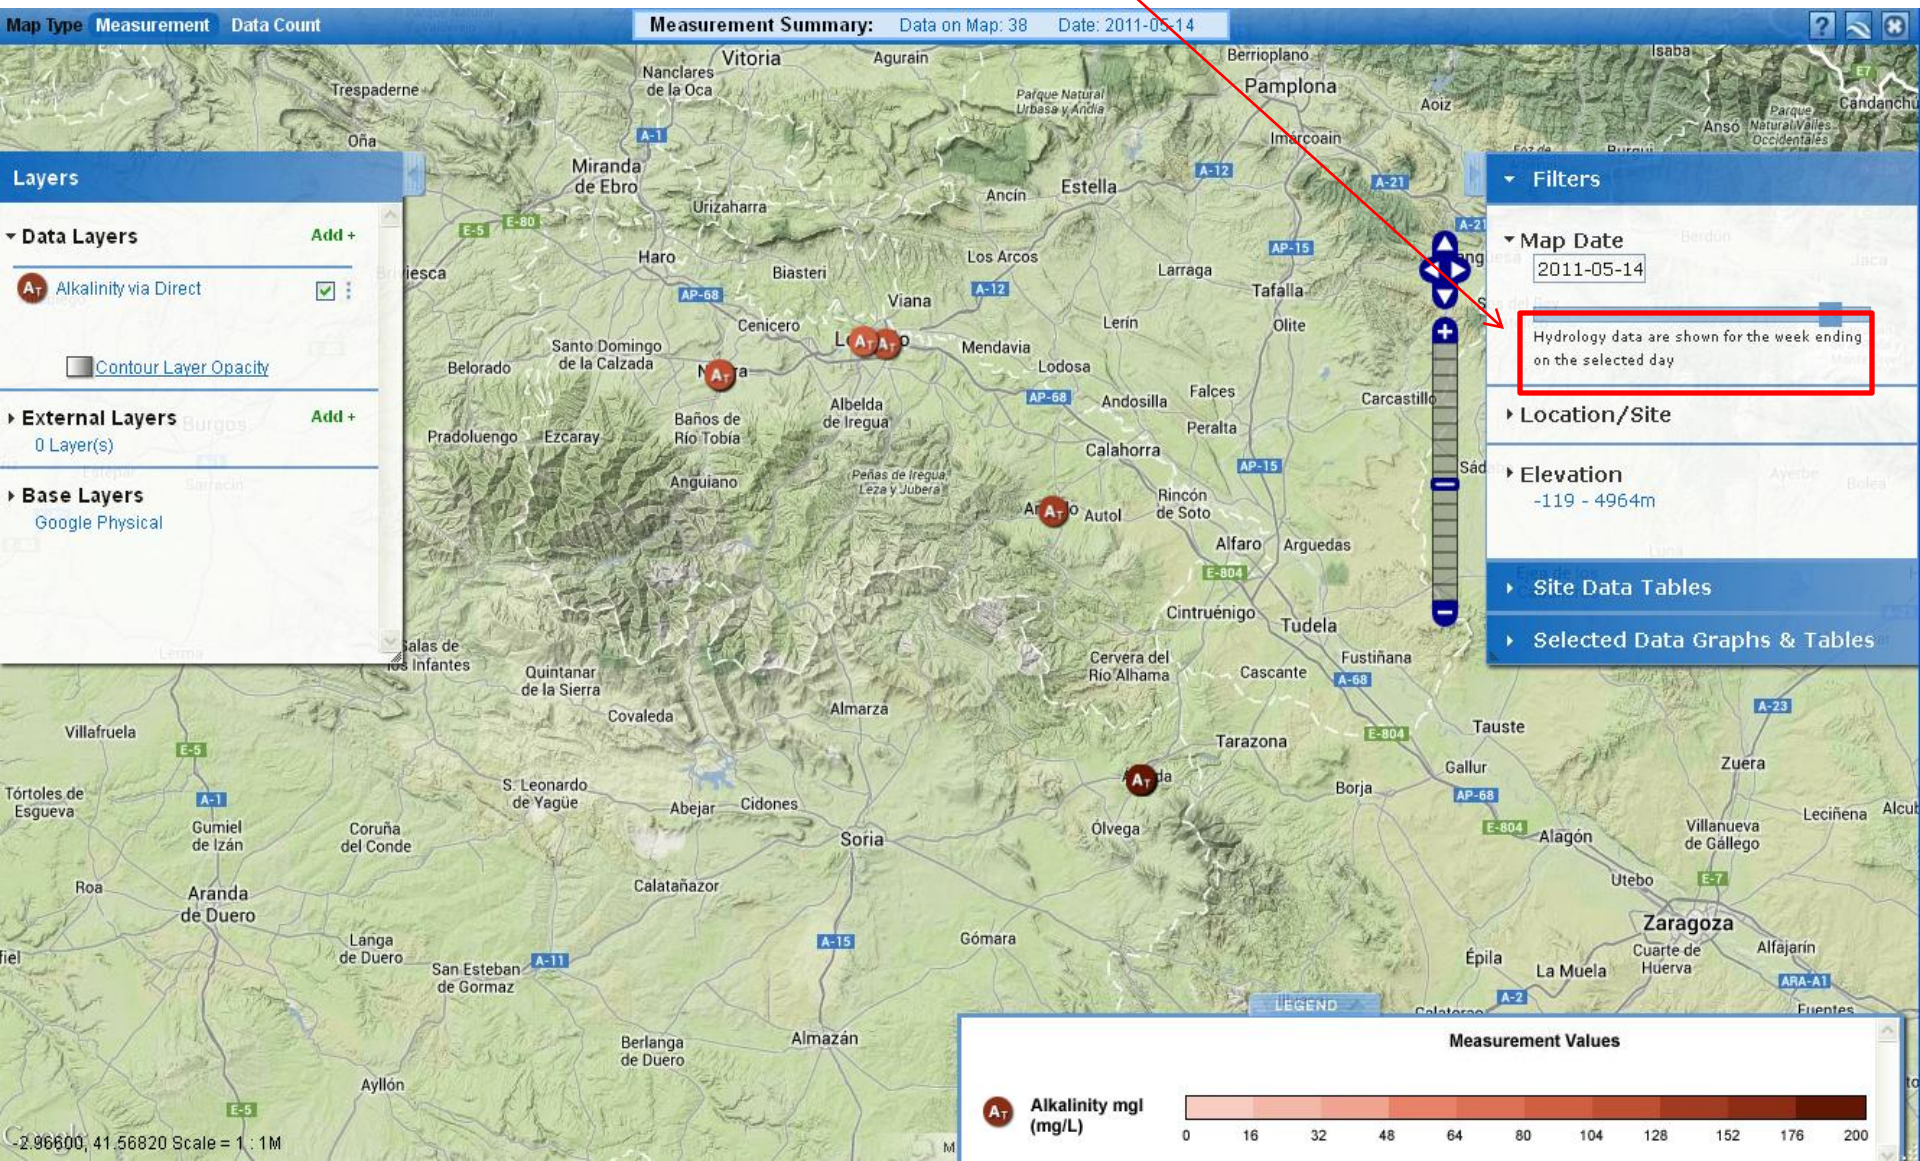

It's also important to realize that if there are lots of data sites displayed on the map, site icons may be hidden under other icons. If you are not seeing the correct site info window when you click on a site, try zooming in to make sure your site is not hidden under another site. How many sites are in the square below?

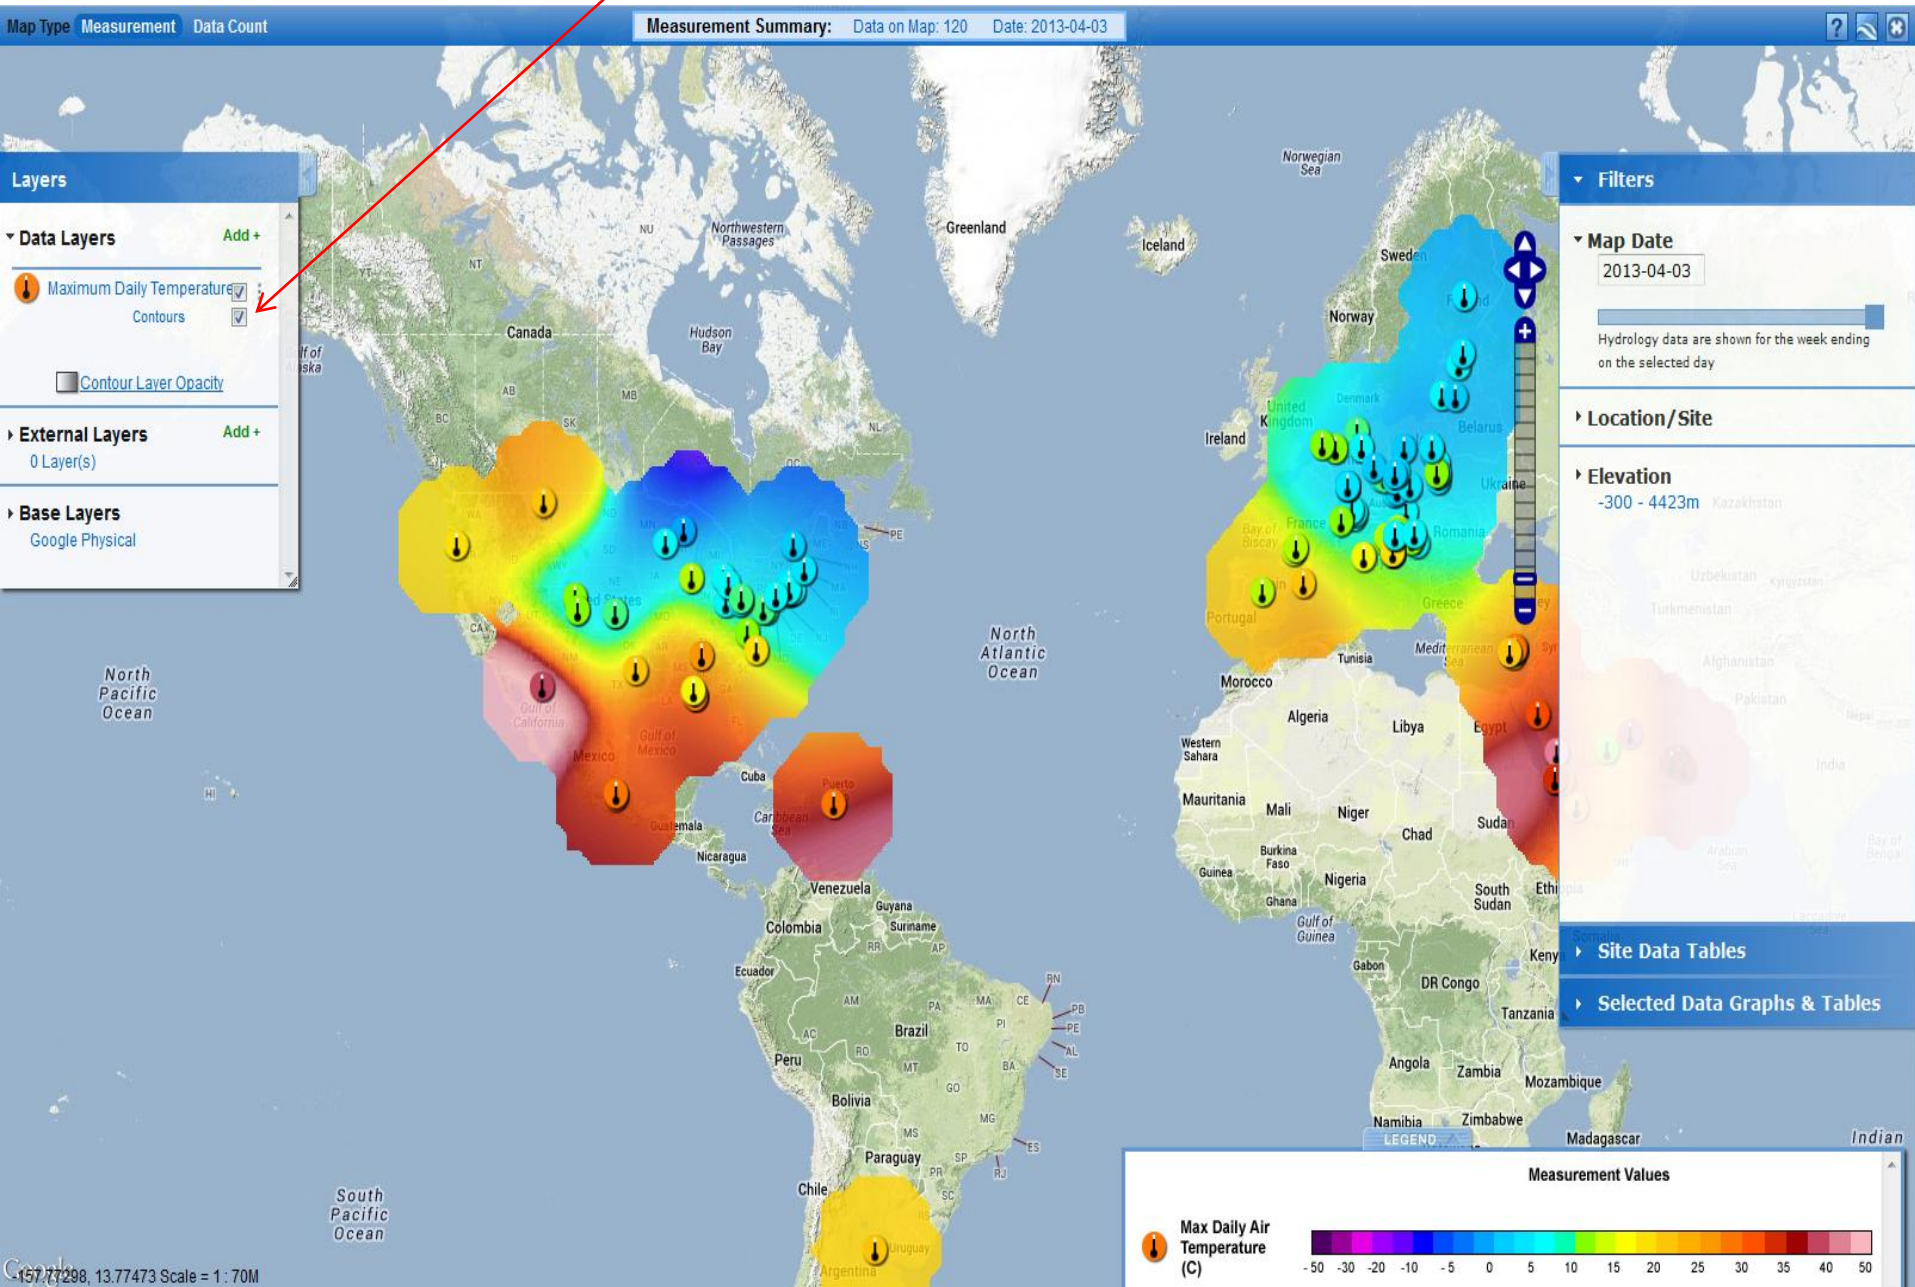

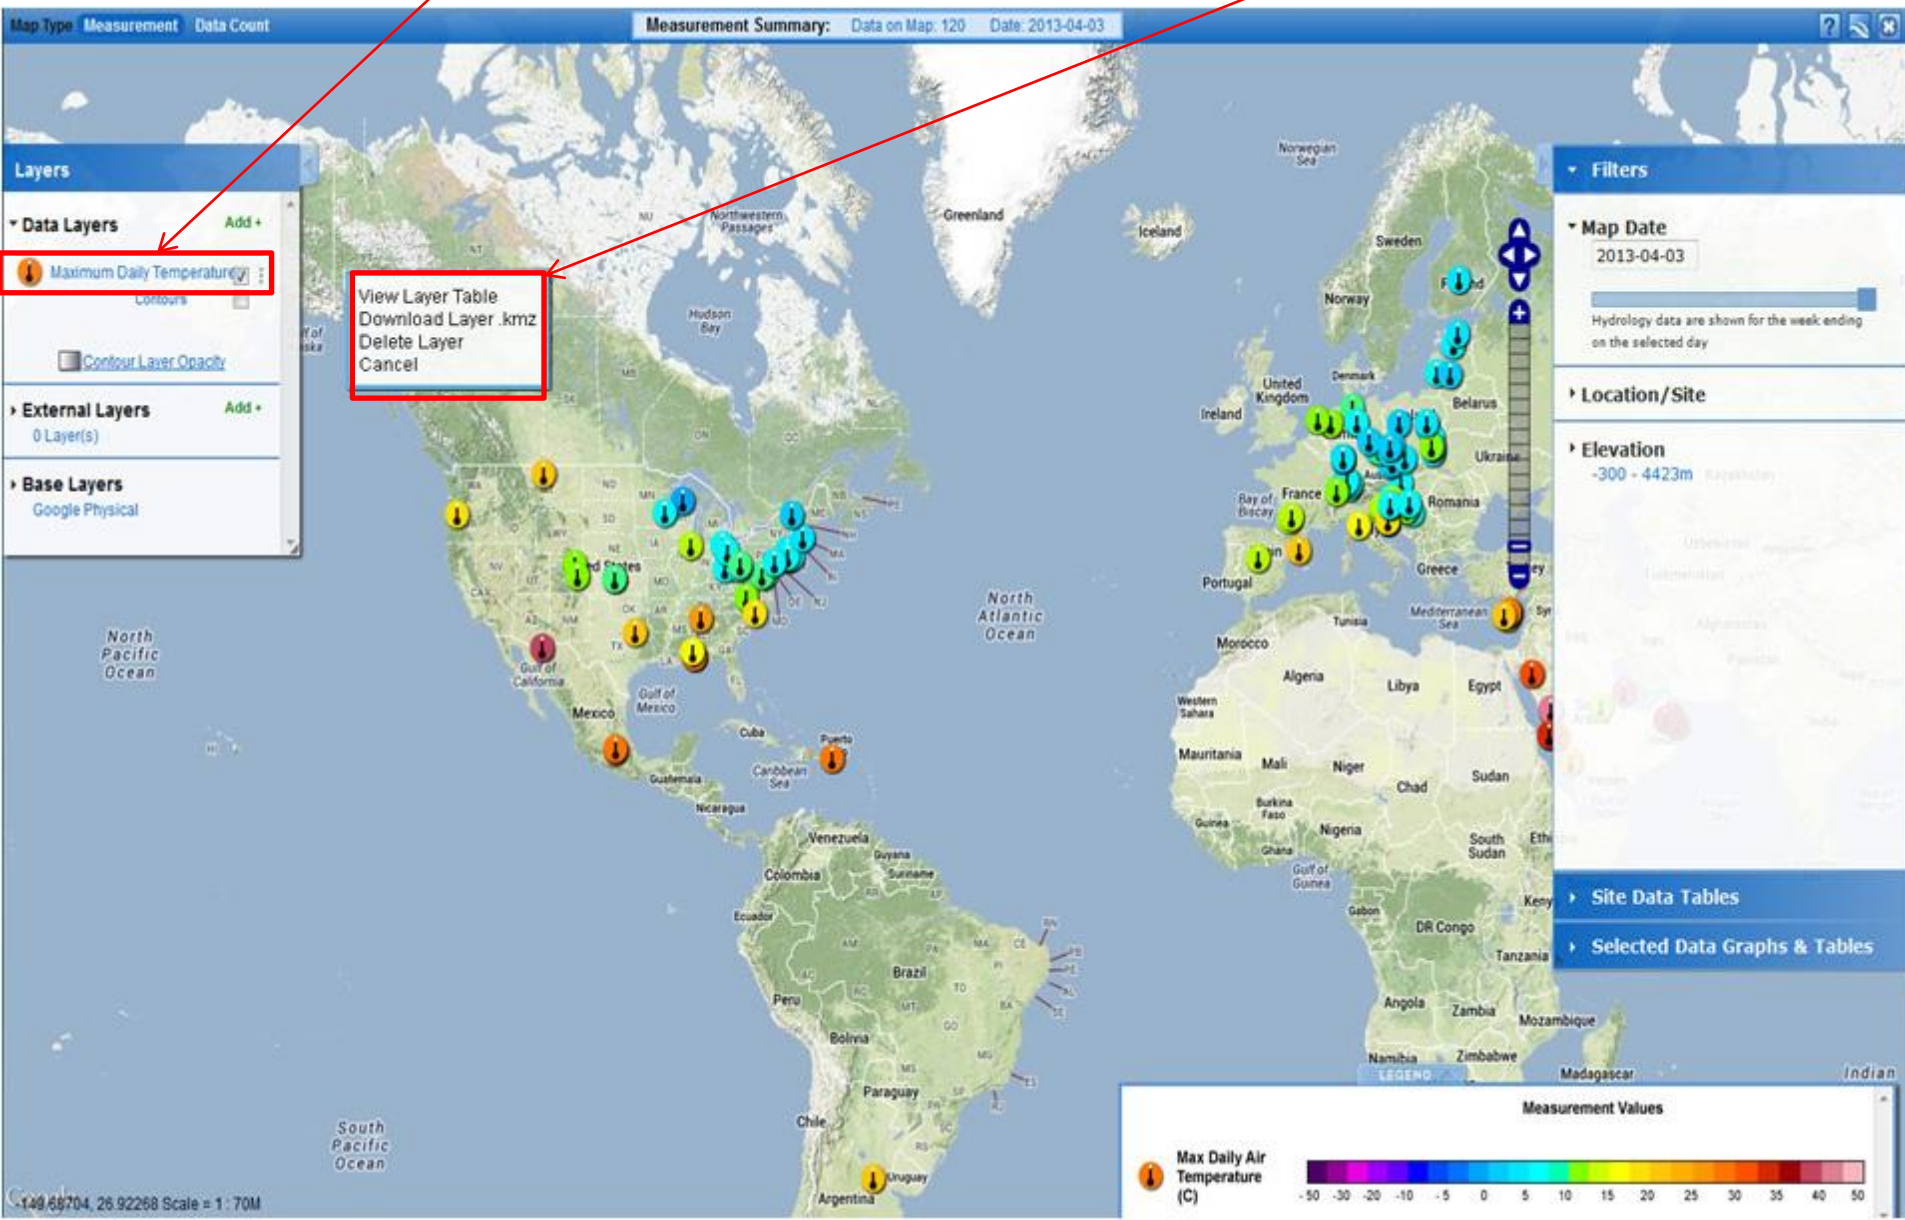

Hydrology data are shown for the 7 days ending with the date selected for a map.

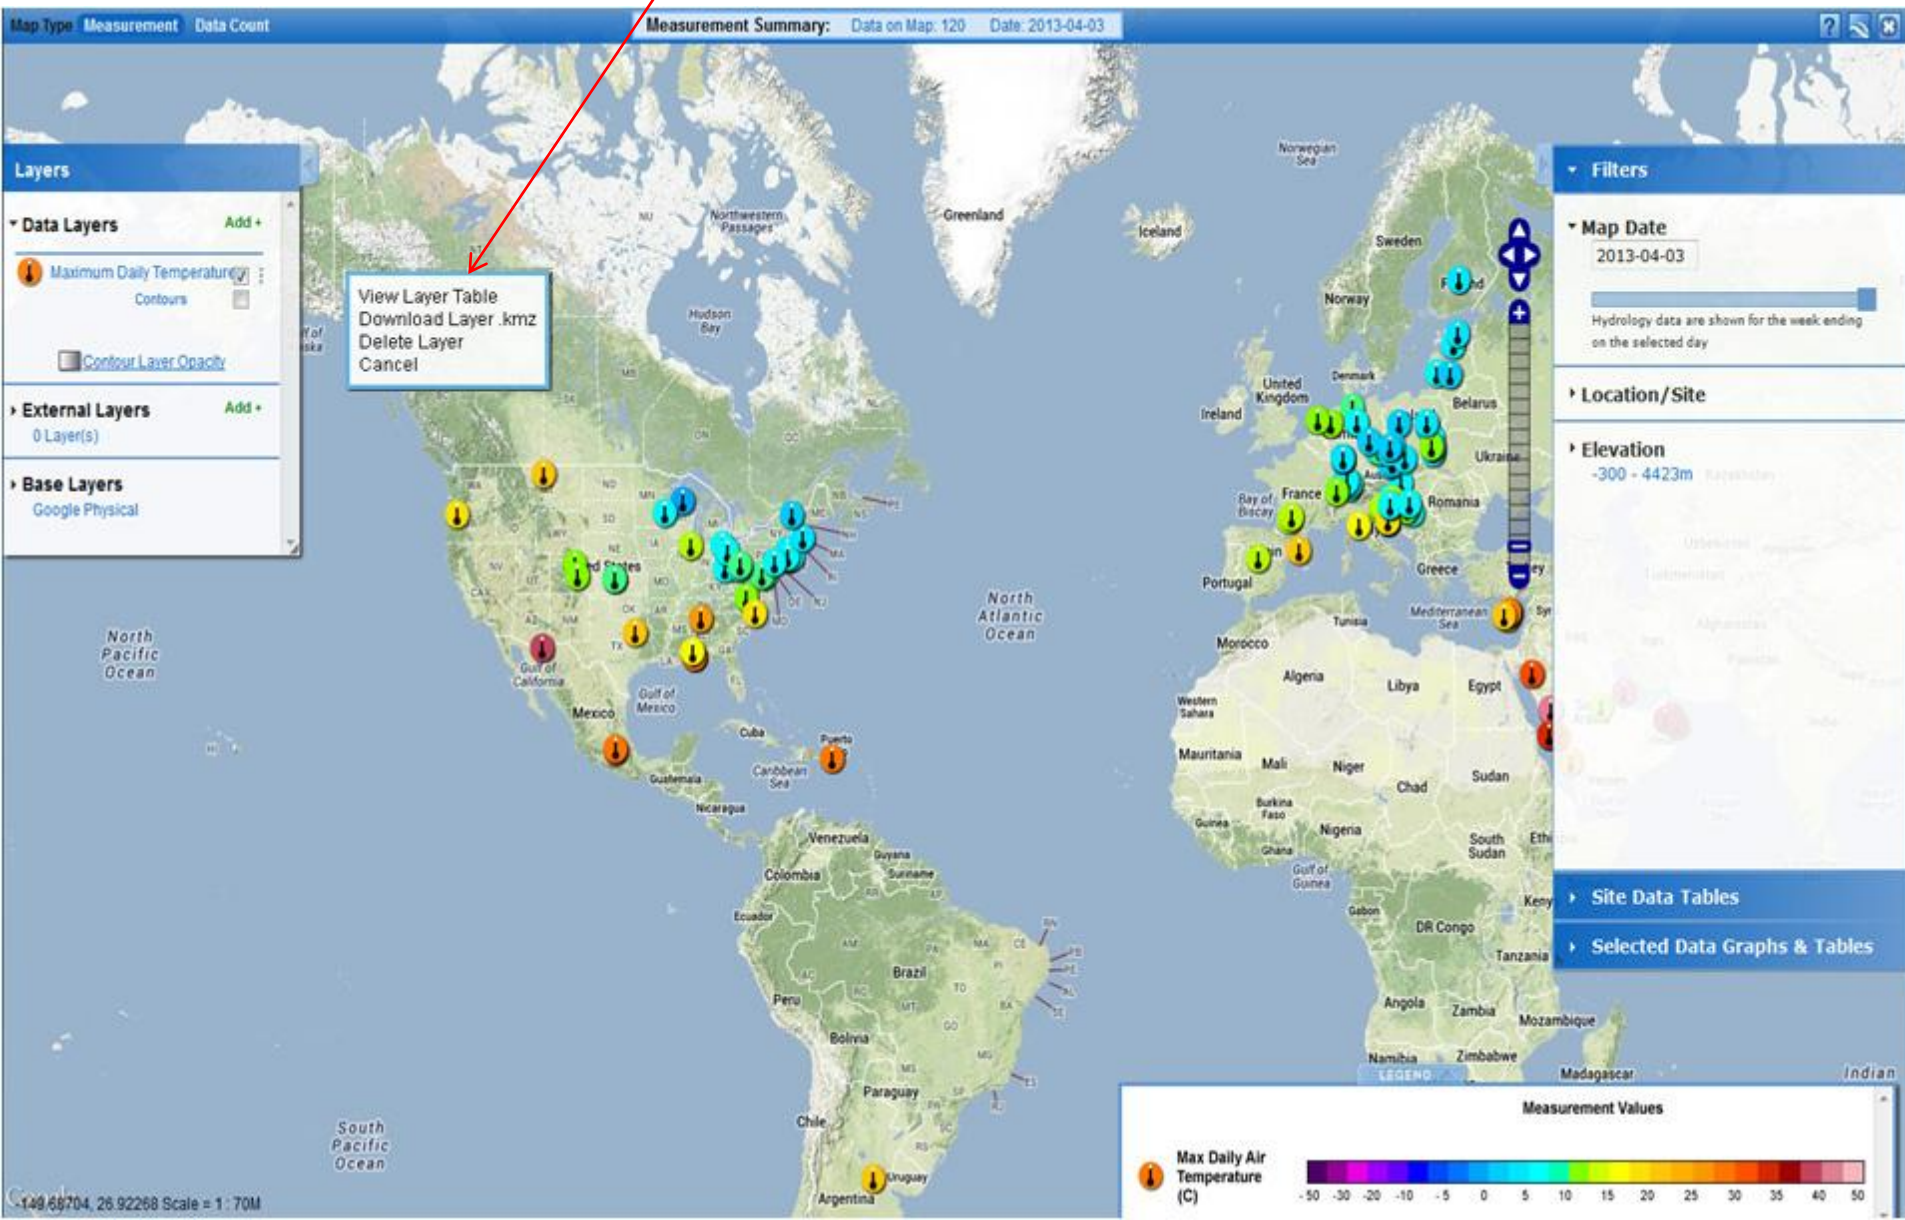

From the **Layers** Pop-Up box contours of some data sets may be shown by clicking the **Contours** box.

Click on the layer name (**Maximum Daily Temperature**) – A selection pop-up box appears.

Click on **View Layer Table** – a layer values table appears.

The table can be sorted by any Field Name (School Name, Site Name, etc.)
Double -click on the field name to sort by that field.

A KMZ file may be exported to Google Earth (desktop version) by clicking [Download KMZ](#).
You may also view the visible layers in Google's 3D Browser version (less powerful)

If your browser supports Geolocation services (such as Firefox), you can zoom directly to your location by selecting the 'current location' icon

Your Assignment

1. On April 7, 2004, how many schools in the Czech Republic reported a water pH reading less than 5?
2. Which measurement technique did the school(s) use?
3. What was the range of pH values reported for this site in 2003 and 2004?
4. Pick one Czech school with a pH value less than 5 and another nearby school reporting water pH on April 7, 2004 and plot the data from the two schools for January to May 2004. What does the graph illustrate?
5. Which school in Poland has reported the most water pH data?
6. Plot water pH, conductivity, and alkalinity for this site from January to May 2004.
What does this graph illustrate?

Answers

1. One (Filtered by Czech Republic using the place filter and date and then used the 'View Table Layer' tool).
2. Paper (Clicked on the site on the map, it's the lightest color icon. Value found in site info window).
3. 3 – 6 pH units in 2003, 3-6.5 in 2004 (Selected pH and added site to Site Data Table and selected Data Date Range from Jan-Dec 2003 and then for 2004).
4. The pH level for the school with the higher pH lever on April 7th on was consistently higher from Jan to May
5. [XI Liceum St. Konarskiego in Wrocław](#) (Filtered by Poland, switched to Data Counts map. It has the largest circle)
6. The pH remains fairly constant despite significant changes in alkalinity and conductivity (Added each dataset to the plot list by selecting each one in the site info window)
