Site Definition Sheet

School Name: _____________________________  Site Name: _____________________________

Names of students completing Site Definition Sheet: _____________________________________

Date: Year_____  Month______  Day____  Check one:  ❑ New Site  ❑ Metadata Update

*Coordinates: Latitude: __________˚ N or S  Longitude: __________˚ E or W

Elevation: __________ meters

*Source of Location Data (check one):  ❑ GPS  ❑ Other _________________________

Comments: ______________________________________________________________
________________________________________________________________________
________________________________________________________________________

Site Type (select all that apply based on intended measurements, then complete the necessary fields below):  ❑ Atmosphere  ❑ Surface Temperature  ❑ Hydrosphere
❑ Biosphere Land Cover  ❑ Biosphere Greening  ❑ Biosphere Phenological Gardens
❑ Biosphere Lilacs  ❑ Soil (Pedosphere) Characteristics
❑ Soil (Pedosphere) Moisture and Temperature  ❑ Soil (Pedosphere) Frost Tube

Cover type (Select one):  ❑ Short grass (< 0.5m)  ❑ Tall grass (> 0.5m)  ❑ Barren land
❑ Sand  ❑ Closed Forest (Trees interlocking)  ❑ Woodland (Trees not interlocking)
❑ Shrubs  ❑ Dwarf Shrubs  ❑ Flowering Plants  ❑ Wetland  ❑ Cultivated Agricultural
❑ Cultivated Recreational  ❑ Open Water  ❑ Bare Rock  ❑ Urban Residential
❑ Urban Commercial  ❑ Asphalt  ❑ Concrete  ❑ Other  ❑ Land Cover site

If you selected Closed Forest or Woodland, indicate the ground cover (Select one):  ❑ Leaf Litter  ❑ Moss  ❑ Peat

Atmosphere

List any obstacles (Check one):  ❑ No obstacles  ❑ Obstacles (describe below)
(Obstacles are trees, buildings, etc. that appear above 14˚ elevation when viewed from the site)

Description: ______________________________________________________________
________________________________________________________________________

Buildings within 10 meters of instrument shelter (Check one):  ❑ No buildings  ❑ Buildings (describe below)

Description: ______________________________________________________________
________________________________________________________________________

Other Site Data:

Steepest Slope: ________________  Compass Angle (facing up slope): ________________
Rain Gauge Height: ________ cm  Ozone Clip Height: ________ cm  Thermometer Height: ________ cm

*Thermometer Type (Check one):
❑ Other, Soil or Air
❑ Liquid-filled, Current Temperature Only
❑ Digital Single-Day Min/Max
❑ Digital Multi-Day Min/Max
❑ Reset Digital Multi-Day Min/Max Thermometer

Note: reset is required before data collection and entry, when batteries are changed or every 6 months
School Name: _________________ Study Site: ________________ Date: ____________

Date: Year____ Month____ Day___ Universal Time (hour:min): ________

Was this reset due to a battery change?  ☐ Yes  ☐ No
☐ Earth Networks Station (Automated Station ID ____________)
☐ Davis Instrument (Davis Thermometer Type ____________)
☐ Data Logger (HOBO)
☐ Rainwise
☐ WeatherHawk
☐ No Thermometer

Surface Cover Description under instrument shelter (Check one):  ☐ Pavement
☐ Bare ground  ☐ Short grass (< 10 cm)  ☐ Long grass (> 10 cm)  ☐ Sand
☐ Roof (describe below)  ☐ Other (describe below)

Description: ____________________________________________________________

Overall comments on the site (metadata): ____________________________________

Surface Temperature

Homogeneous site size (Select one):  ☐ 90m x 90m  ☐ 30m x 30m
☐ Smaller than 30 x 30m (specify size: __ m x __ m)

Type of IRT Instrument:  ☐ Raytech ST20  ☐ Other (specify instrument manufacturer and model) _____________

Overall comments on the site (metadata): ____________________________________

Hydrosphere

*Name of Body of Water: ________________________________ (the name commonly used on maps; if the body of water does not have a common name, provide a description of the water body it comes from or flows into or both.)

*Water Body Type (Select one):  ☐ Unknown  ☐ Saltwater  ☐ Freshwater  ☐ Brackish

Water Body Source (Select one):
☐ Pond (Area of standing water ___ km²; Average Depth of Standing Water ___ m)
☐ Lake (Area of standing water ___ km²; Average Depth of Standing Water ___ m)
☐ Reservoir (Area of standing water ___ km²; Average Depth of Standing Water ___ m)
☐ Bay (Area of standing water ___ km²; Average Depth of Standing Water ___ m)
☐ Ditch (Area of standing water ___ km²; Average Depth of Standing Water ___ m)
☐ Ocean
☐ Estuary (Area of standing water ___ km²; Average Depth of Standing Water ___ m)
☐ Stream (Width of Moving water ___ m)
☐ River (Width of Moving water ___ m)
☐ Marsh/ Swamp
☐ Agriculture
Puddles, animal and vehicle tracks
Other (Width of Moving water ___ m; Area of standing water ___ km²; Average Depth of Standing Water ___ m)

Water Sample Location:  ☐ Outlet  ☐ Bank  ☐ Bridge  ☐ Boat  ☐ Inlet  ☐ Pier
Can you see the bottom?  ☐ Yes  ☐ No

Channel/Bank Material:  ☐ Soil  ☐ Rock  ☐ Concrete  ☐ Vegetated Bank

Bedrock:  ☐ Granite  ☐ Limestone  ☐ Volcanics  ☐ Mixed Sediments  ☐ Unknown

Freshwater Habitats Present:  ☐ Rocky Substrate  ☐ Vegetated Banks  ☐ Mud Substrate  ☐ Sand Substrate  ☐ Submersed Vegetation  ☐ Logs

Saltwater Habitats Present:  ☐ Rocky Shore  ☐ Sandy Shore  ☐ Mud Flats/Estuary

Overall comments on the site (metadata):
________________________________________________________________________

Greening

Are there multiple dominant species?  ☐ Yes  ☐ No

Primary Plant
Is this plant in the understory?  ☐ Yes  ☐ No

Vegetation Type (Select one):  ☐ Grass Genus: ______
☐ Tree Genus: ______ Species: ______
☐ Shrub Genus: ______ Species: ______

Label: ___________________________

Secondary Plant
Is this plant in the understory?  ☐ Yes  ☐ No

Vegetation Type (Select one):  ☐ Grass Genus: ______
☐ Tree Genus: ______ Species: ______
☐ Shrub Genus: ______ Species: ______

Label: ___________________________

Tertiary Plant
Is this plant in the understory?  ☐ Yes  ☐ No
Vegetation Type (Select one):
- Grass Genus: ________
- Tree Genus: ________ Species: __________
- Shrub Genus: ________ Species: __________

Label: _______________________

If additional plants will be monitored record the information on another sheet or in your Science Log.

Overall comments on the site (metadata): _______________________________________

Phenological Gardens

Soil Texture (Select one):
- Unknown
- Sandy Clay
- Sandy Clay Loam
- Sandy Loam
- Silty Clay
- Silty Clay Loam
- Silt Loam
- Loamy Sand
- Sand
- Silt
- Clay
- Clay Loam
- Loam
- Organic

Average: ____ mg/L NO₃⁻ - N
Hydrosphere Investigation
Data Sheet

School name: ________________________  Class or group name: __________________
Name(s) of Student(s) collecting data: _________________________________________

**Measurement Time:** *
Year: _____  Month: ____  Day: ____  Time: __:__ (UT)  Time: __:__ (Local)

Name of Site : ____________________________________________________________

**Water State:** (check one) *
☐ Normal  ☐ Flooded  ☐ Dry  ☐ Frozen  ☐ Unreachable

**Note:** If Normal is selected, continue below; all other selections stop here

**Sky Conditions (Check one):**
- ☐ Clear (no Clouds Visible)
- ☐ Clouds Visible (1% to 100% Covered by Clouds or Contrails)
- ☐ Obscured (More than 25% of the Sky is not Visible)

**Note:** selecting **Obscured** will prevent data entry on clouds and contrails; therefore skip the cloud type and cover and the contrail type and cover sections and proceed to the Obscured section. If clouds and contrails are visible in non-obscured areas of the sky, these data can be entered in the Metadata field.

If Clouds are Visible select all Cloud Types Seen

**High (in the sky):**
(Check all types seen)

- ☐ Cirrus
- ☐ Cirrocumulus
- ☐ Cirrostratus

**Middle (of the sky):**
(Check all types seen)

- ☐ Altostratus
- ☐ Altocumulus

**Low (in the sky):**
(Check all types seen)

- ☐ Stratus
- ☐ Stratocumulus
- ☐ Cumulus

**Rain or Snow Producing Clouds:**
(Check all types seen)

- ☐ Nimbostratus
- ☐ Cumulonimbus
What Percent of the Sky is Covered by Clouds? (Check One) Three-quarters or More of the Sky is Visible:

Cloud Cover (Check One)

- No Clouds [ ] 0%
- Clear [ ] >0 to 10%
- Isolated [ ] 10 to 25%
- Scattered [ ] 25 to 50%
- Broken [ ] 50 to 90%
- Overcast [ ] >90%

Are There Contrails in the Sky? (Check One) [ ] No Contrails [ ] Contrails are Visible

If Contrails are Visible Record the Number of Each Type Seen

- Short-lived
- Persistent Non-Spreading
- Persistent Spreading

What Percent of the Sky is Covered by Contrails? (Check one):

- 0 to 10%
- 10 to 25%
- 25 to 50%
- >50%

If you Selected Obscured (> 25% of the Sky is not Visible) (Check all that apply):

- Blowing Snow
- Heavy Snow
- Heavy Rain
- Fog
- Sand
- Spray
- Volcanic Ash
- Smoke
- Dust
- Haze

Comments: ______________________________________________________________
________________________________________________________________________
**Transparency**

Enter data below, depending on whether you are using the Secchi Disk or the Transparency Tube method.

**Secchi Disk**

**Secchi Disk Test 1:**
Distance from observer to:

to water surface _____ m

where disk disappears ____m    where disk reappears ____ m

OR

☐ Secchi Disk reaches the bottom and does not disappear.
   to water surface ____ m    depth to the bottom of the water site ___

**Secchi Disk Test 2:**
Distance from observer to:

to water surface _____ m

where disk disappears ____m    where disk reappears ____ m

OR

☐ Secchi Disk reaches the bottom and does not disappear.
   to water surface ____ m    depth to the bottom of the water site ___

**Secchi Disk Test 3:**
Distance from observer to:

to water surface _____ m

where disk disappears ____m    where disk reappears ____ m

OR

☐ Secchi Disk reaches the bottom and does not disappear.
   to water surface ____ m    depth to the bottom of the water site ___

**Transparency Tube**

**Transparency Tube Test 1:** _____ cm

☐ Greater than depth of Transparency Tube

**Transparency Tube Test 2:** _____ cm

☐ Greater than depth of Transparency Tube

**Transparency Tube Test 3:** _____ cm

☐ Greater than depth of Transparency Tube

</table>
Glossary

Abundance
The number of organisms in a sample or taxon

Accuracy
The closeness of a measured value to a true value (See precision)

Acid
Any substance that can donate a hydrogen atom or proton (H+) to any other substance.

Acid Rain
Rain characterized by pH values below 6 on the pH scale

Acidic
Characterized by pH < (less than) 7

Acidity
1. The amount of strong base (e.g. Sodium Hydroxide) necessary to titrate a sample to a pH of around 10.3; measures the base neutralizing capacity of a water
2. An acid quality or state (Common Usage)

Aerosols
Liquid or solid particles dispersed or suspended in the air

Alkaline
Characterized by pH > 7

Alkalinity
The amount of strong acid (e.g. Hydrochloric Acid) necessary to titrate a sample to a pH of around 4.5. Measures the acid neutralizing capacity of a water and is often reprinted as ppm CaCO₃.

Aqueous
Containing or contained in water

Background Concentration
The level of chemicals present in a water due to natural processes rather than due to human contribution

Base
Any substance that accepts a proton (H+) from another substance

Benthic
Pertaining to bottom dwelling water animals or plants

Biodiversity
The variety of organisms

Brackish Water
Water containing dissolved salts at a concentration less than seawater, but greater than fresh water. The concentration of dissolved salts is usually in the range 1000 - 10,000 ppm.

Buffer Solution
One that resists change in its pH when either hydroxide (OH-) or protons (H+) are added. The stable and known pH value of these solutions make them suitable for calibrating pH measuring devices.

Calibration
To set or check an instrument against an index or standard of known value through some type of proportional or statistical relationship.

Catchment Basin
1. The part of a river-basin from which rain is collected, and from which the river gets its water. Each catchment basin is with the boundary defined by the watershed. The term watershed is often incorrectly used to describe catchment basins.
2. The area drained by a river or stream

Chlorinity
The chlorine concentration of a solution

Colorimetric Method
Many procedures for measuring dissolved substances depend on color determination. The underlying assumption is that the intensity of the color is proportional to the concentration of the dissolved substance in question.

Conductivity
The ability of an aqueous solution to carry an electrical current. Depends upon the concentration of dissolved salts (ions), the type of ions, and the temperature of the solution. Typical units are microSiemens/cm or micromhos/cm. (These are equivalent).

Denitrification
The act or process of reducing nitrate to ammonia. Nitrite may be an intermediate product.
Density
The ratio of the mass of a substance to its volume

Dissolved Oxygen
The mass of molecular oxygen dissolved in a volume of water. The solubility of oxygen is affected non-linearly by temperature; more oxygen can be dissolved in cold water than in hot water. The solubility of oxygen in water is also affected by pressure and salinity; salinity reduces the solubility of oxygen in water.

Dissolved Solids
Solid particles that have become liquid by immersion or dispersion in a liquid (e.g. salts)

Electrode
In GLOBE, an electrode is usually the part on the probe through which electricity is able to flow.

Enrichment
Making a water more productive (e.g. by adding nutrients)

Eutrophication
A high level of productivity in a water body, often due to an increased supply of nutrients

Evaporation (of water)
Change from liquid to vapor at a temperature below the boiling point

Evenness
How equally abundant the taxa are in a sample

Hydrologic Cycle
The series of stages through which water passes from the atmosphere to Earth and returns to the atmosphere. Includes condensation to form clouds, precipitation, accumulation in soil or bodies of water and re-evaporation

Hypothesis
A tentative statement made to test its logical or empirical consequences

In Situ
Situated in its original natural place (Latin)

Lake
A large body of water entirely surrounded by land usually naturally formed, but can be artificially formed. Its original designation was to apply to a body of water large enough to form a geographical feature.

Lentic
Relating to, or living in, standing water (lakes, ponds or swamps)

Logarithmic Scale
A scale in which each unit increment represents a tenfold increase or decrease

Lotic
Relating to, or living in actively moving water (streams or rivers)

Macroinvertebrates
Animals that have no backbone and are visible with the naked eye (>0.5 mm)

Meter
An instrument, usually used in combination with a probe, that translates electronic signals from the probe into units of interest (i.e. µS/cm or mg/L). A meter must be programmed with the proper calibration for the probe of interest before producing sensible results.

MicroSiemens/cm
Metric unit of measurement for conductivity. Equivalent to micromhos/cm

Micromhos/cm
Standard unit of measurement for conductivity. Equivalent to microSiemens cm

Molar
Unit of measurement for concentration (moles per liter of solution).

Molecule
The smallest fundamental unit (usually a group of atoms) of a chemical compound that can take part in a chemical reaction

Natural Waters
Systems that typically consist of the sediments/minerals and the atmosphere as well as the aqueous phase; they almost always involve a portion of the biosphere.

Neutral
Characterized by pH = 7

Nitrate
A salt of nitric acid (HNO₃). Nitrates are often highly soluble and can be reduced to form nitrites or ammonia.
Nitrate-Nitrogen
Concentrations of nitrate (NO$_3^-$) are often expressed as mass of nitrogen per volume of water.

Nitrite
A salt of nitrous acid (HNO$_2$). Nitrites are often highly soluble and can be oxidized to form nitrates or reduced to form ammonia.

Nitrite-Nitrogen
Concentrations of nitrite (NO$_2^-$) are often expressed as mass of nitrogen per volume of water.

pH
The negative logarithm of the molar concentration of protons (H$^+$) in solution.

Photosynthesis
The process in which the energy of sunlight is used by organisms, esp. green plants to synthesize carbohydrates from carbon dioxide and water.

Pond
A small body of still water formed artificially either by hollowing out of the soil or by damming a natural hollow.

Pool
In a stream or river, a deeper region with slower-moving water and smaller sediments.

ppm
Usually parts per million. (Equivalent to milligrams per liter in GLOBE calculations).

ppm Chlorinity
By weight, equal to milligrams of chlorine per liter, with the assumption that one liter of water weighs one kilogram.

ppt
Usually parts per thousand. (Equivalent to grams per liter in GLOBE calculations).

Precipitation
1. The falling products of condensation in the atmosphere, e.g. rain, snow, hail
2. Separation in solid form from a solution due to chemical or physical change (e.g. adding a reagent or lowering the temperature).

Precision
A measurement for the degree of agreement between multiple analyses of a sample (See accuracy).

Probe
In GLOBE, an instrument used to measure voltage or resistance of a substance. Any small device, especially that holds an electrode, which can penetrate or be placed in or on something for the purpose of obtaining and relaying information or measurements about it. A probe along with a meter must be calibrated in order to produce sensible data.

Productivity
The formation of organic matter averaged over a period of time such as a day or a year.

Proton
A positively charged elementary particle found in all atomic nuclei. The positively charged hydrogen atom (H$^+$).

Reagent
A substance used to cause a reaction, especially to detect another substance.

Reduce
In chemical terms, to change from a higher to a lower oxidation state (i.e. gain electrons).

Richness
The number of different taxa.

Riffle
In a stream or river, a shallower area with faster-flowing water and larger sediments.

River
A large stream of water flowing in a channel towards the ocean, a lake, or another river.

Run
In a stream or river, an intermediate category between pool and riffle. A run does not have the turbulence of a riffle, but moves faster than in a pool.

Runoff
The component of precipitation that appears as water, flowing in a stream or river.

Saline Water
Water containing salt or salts.

Salinity
A measure of the concentration of dissolved salts, mainly sodium chloride, in brackish and salty water.
Salts
Ionic compounds which in water solution yield positive (excluding H+) and negative (excluding OH-) ions; the most common of which is sodium chloride, or “table salt”

Saturated Solution
A solution that contains the maximum amount of dissolved substances at a given temperature and pressure

Snag
A tree or branch embedded in the bed of the water body

Solubility
The relative capability of being dissolved

Solute
A substance that dissolves in another to form a solution

Solution
A homogeneous mixture containing two or more substances

Solvent
A substance that dissolves another to form a solution

Specific Heat
The heat in calories required to raise the temperature of one gram of a substance by one degree Celsius

Specific Gravity
The ratio of the density of a substance to the density of water (at 25°C and 1 atmosphere)

Standardization
To cause to conform to a standard

Standard
A measure with a value established through outside means for use in calibration; a known reference

Stream
A course of water flowing continuously along a bed on the Earth, forming a river, rivulet, or brook. Streams can be permanent meaning that water flows in the stream bed all year long; or streams can be intermittent/ephemeral, meaning that the water stops flowing and may even disappear during certain times of the year.

Suboxic Water
Very low levels of dissolved oxygen; denitrification occurs (nitrate is converted to ammonia)

Supersaturated
The characteristic of a substance holding more of another substance that would be predicted under equilibrium conditions. Supersaturated is a term commonly used to describe gases dissolved in water (e.g. if there is a lot of photosynthesis occurring in a lake, the water can become supersaturated in oxygen during the day)

Suspended Solids
Solid particles in a fluid that do not dissolve or settle out

Suspensions
A mixture in which very small particles of a solid remain suspended without dissolving

Taxa
Plural of taxon

Taxon
A group of organisms of any particular rank (such as order, family, genus). Singular of taxa

Tides
The periodic rise and fall of the waters of the ocean and its inlets, produced by the attraction of the moon and sun. Occurs about every 12 hours.

Titrant
The reagent added in a titration

Titration
The process of ascertaining the quantity of a given constituent by addition of a liquid reagent of known strength, and measuring the volume of reagent necessary to convert the constituent through a given reaction

Topography
The surficial relief features of an area

Total Dissolved Solids
The total mass of solids remaining when a given volume of filtered water is evaporated to total dryness following an accepted protocol

Transparency
Having the property of transmitting rays of light through its substance so that bodies located behind can be distinctly seen.
Transparency, when applied to water studies, refers to the distance that an object (e.g. a secchi disk) can be seen looking down through the water under ambient light conditions. Transparency is related to turbidity in that the amount of particles in the water and the characteristics of those particles will affect the distance that an object can be seen, but the two are not directly comparable.

**Turbid**
Not clear or transparent due to stirred up sediment

**Turbidity**
Turbidity, when applied to water studies, refers to the degree that the particles in the water can scatter light sent through a water sample. Turbidity is related to transparency, but the two terms are not equivalent, and the relationship depends on the characteristics of a particular water sample. Therefore turbidity measurements cannot be used in place of transparency measurements and vice-versa.

**Water Quality**
A distinctive attribute or characteristic trait of water, described by physical, chemical, and biological properties

**Watershed**
The line separating the waters flowing into different rivers, river basins or seas; a narrow elevated tract of ground between two drainage areas.; see catchment basin

**Water Vapor**
Water in the gaseous phase
