# THE GLOBE PROGRAM

## Program Implementation, International Cooperation in GLOBE Network, and Activities over Past Year:

### • Education

- ❖ Increased of access of GLOBE materials and education resources
- ❖ Use of GLOBE materials in environmental education projects
- ❖ More training and educate teachers and students on how to implement Globe protocols

### • Science

- ❖ Increased student projects focused on environmental awareness
- ❖ Encourage students to participate in IOP projects and contribute to Globe science by investigating their local environment

### Community

- ❖ Encourage and engage community around us to participate in the Globe science in one way or another. To look for simple ways possible for community to participate in this program.

### Technology

- ❖ Come up with methods and ways engage teaches to use current technology to teach students.
- ❖ Introduction of tables and use of regular phones to be used for data entry.

### Communications

- Come up with different easy methods and means of communication with all Globe schools which will help Globe teachers to collect data and communicate with the leader and to each other.

## **Plans and Ideas for 2024-2025**

We are fully committed to stimulate Globe programs in Tanzania. . We will encourage and find simple ways for majority of our students to participate in the Globe Programs especially those who are coming from rural areas or poor schools. Our main goal is to implement effective STEM education programs in Tanzania.

Out of 233 GLOBE Schools, only a few schools have required facilities for data collection.. Our plan is to make all schools in Tanzania active and provide required material which will enable them to collect data and enter them in the Globe system for the intended purpose.

Training, seminars and workshops will be scheduled for teachers, students and researchers to enhance their knowledge and thirst to participate in the Globe Program efficiently.

# THE GLOBE PROGRAM

We will reach out to more partners, researchers, universities, and other stake holders in order to increase participation in the Globe Program. We will encourage collaboration among Globe School members in the country and outside the country for them to learn from each other.

With all this, we will need support from GIO for us to reach our goals. We will try to learn from other Partner countries and share experiences on similar challenges.

To add value and efficiency in our programs we have added a Country Coordinator for schools/colleges and partners.

Before the end of the year 2024 our plan is to register about 1000 schools and make them active in Globe observations and data entry.

**WE ARE LOOKING FORWARD TO DO FAR MUCH BETTER IN THE COMING MONTHS.**
