

TREES

Choose a tree nearby
and observe
when the
FIRST LEAVES
appear in spring.

Take a walk and
CHECK THE
DIFFERENCES
between areas with
and without trees.

How do
TREES HELP
our planet and the people
who live here?

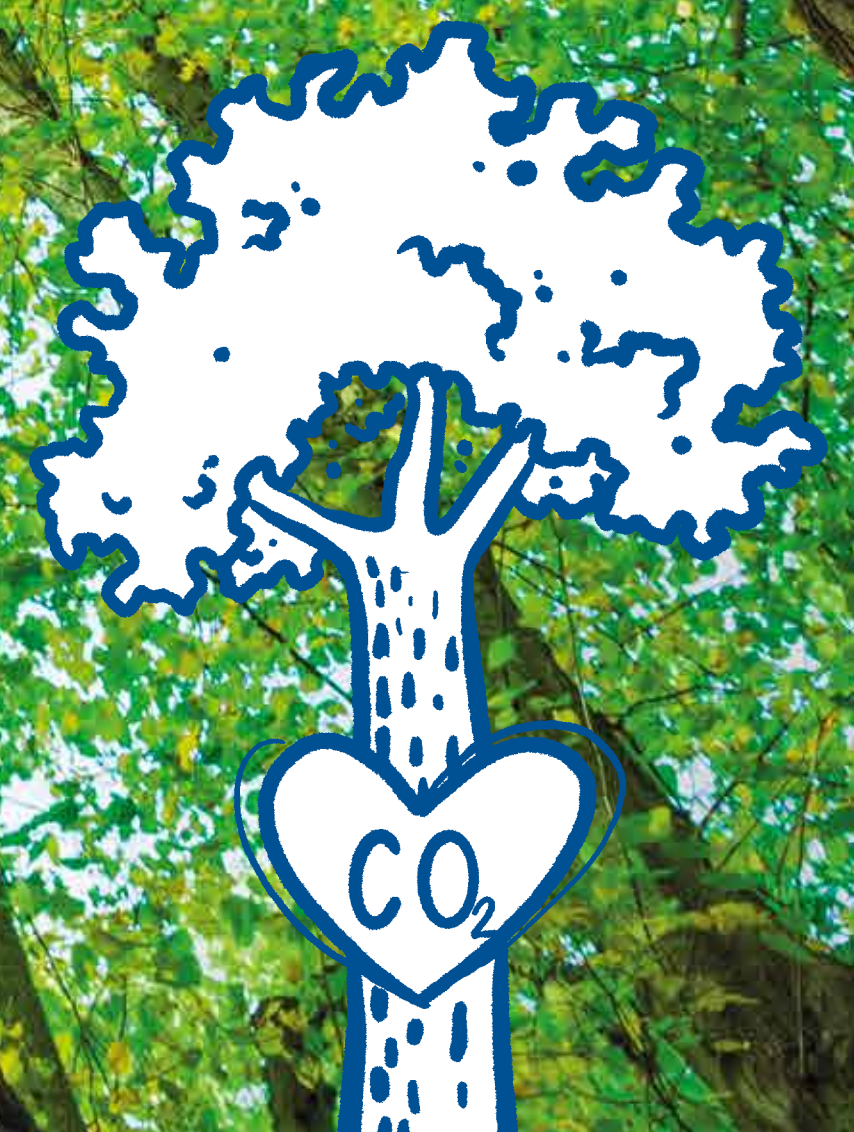

What good things
do they do for the air,
water, and animals
around?

If a tree could talk,
WHAT WOULD
YOU ASK IT?

Try to guess
HOW TALL
a tree is.

Check if your estimate
was right using
the **GLOBE Observer App**.

What is the
ROLE OF TREES
in the carbon cycle?

The GLOBE Program

An international science and educational program that provides students and the public worldwide with the opportunity to collect environmental data and be part of the scientific process.

More than 1.2 million students, teachers, scientists and citizen scientists create a learning community across the borders. Together they explore trees, rivers, lakes, soil, clouds or climate around their homes and schools. They share not only the research findings, but also the best of their culture.
