Mangrove Swamps near Bangkok

Bang Pu Nature Education Centre

We are a group of high school students from Bangkok, Thailand. As part of our studies on ecology, we were asked to produce a video report about an aquatic ecosystem in Thailand. For our documentary, we went to explore two mangrove swamps, Bangkhutian and Bang Pu Nature Education Centre, in Bangkok and Samut Prakan provinces respectively. These two sites are open to the public, for anyone who wishes to visit or study this important aquatic ecosystem. Mangrove swamps are disappearing rapidly, so we need to act soon to raise awareness and help people realize how much we are harming our environment, the sea, and the world. One of the reasons we chose to make a documentary about mangrove swamps was to help people understand them better. This video primarily explores the basic features of mangrove swamps, such as the species that live there and their adaptations to the unusual conditions here, functions of mangrove swamps, and threats to their continued existence. If you would like to watch our video and find out more, please click here. <https://youtu.be/6Y0ekBQBjJI>
