

How to retrieve data using the GLOBE Advanced Data Access Tool (ADAT) for Cloud Research Projects

This tutorial was made to help with downloading and processing of cloud data for student research projects focused on contrails, obscured vs. overcast or smoke observations.

Retrieve Data

1. Go to <https://datasearch.globe.gov/>.
2. Click on 'Select Protocols' and choose up to five protocols. You can use the GLOBE Data Visualizer (<https://vis.globe.gov/GLOBE/>) to explore and determine what you're looking for. Click 'Add to Filter' once you've checked up to five boxes.

The screenshot shows the 'Filter by Protocol' dialog box in the GLOBE Advanced Data Access Tool (ADAT). The dialog box is titled 'Filter by Protocol:' and includes the instruction '(Select up to 5 protocols)'. A red annotation 'Check up to five' points to the instruction. The dialog box is divided into two columns: 'Atmosphere' and 'Hydrosphere'. Under 'Atmosphere', the following protocols are listed with checkboxes: Air Temperature Dailies, Air Temperature Monthlies, Air Temperature Noons, Air Temperature, Aerosols, Barometric Pressure Noons, Barometric Pressures, Clouds Noons, Clouds (checked), Precipitation, and Precipitation Monthlies. Under 'Hydrosphere', the following protocols are listed with checkboxes: Alkalinity, Conductivity, Dissolved Oxygen, Freshwater Macroinvertebrates, Mosquito Larvae (inactive), Mosquito Habitat Mapper, Nitrates, pH, Salinity, Water Temperature, and Water Transparency. At the bottom of the dialog box, there is a search bar labeled 'Search for sites that include:' with a dropdown menu set to 'ANY of the protocols checked'. A green 'Add to Filter' button is located at the bottom right of the dialog box. In the background, the 'Select a Filter:' sidebar is visible, showing options for Data Filters (Select Protocols, Date Range, Data Count Range) and Site Filters (Site Name, Country or State/Territory, In proximity of a lake or river, School/Teacher/Partner).

3. Click 'Date Range' and then drag the blue boxes or click on the text boxes below 'Start' and 'End' to select the range of data you want to download.

Select a Filter:

Site Name

Filter by Date Range:

Start End

1995-01-01 to 2020-09-24

Dates are based on UTC time

Range slider

Add to Filter

- Once you have decided on your range, click 'Add to Filter'. There are often large amounts of data even among small periods of time. We recommend downloading no more than one month at a time. In the below image, we clicked on the 'Start' and 'End' boxes to bring up a calendar that let's us select a week's worth of data.

When filterin

- The number at the top of the page represents the number of sites found. A site in GLOBE is a location (a unique latitude and longitude) where an observation was taken at. If you are good with the number of sites found, click 'Obtain Measurement Data', then 'Download Measurement Data' (it's the same button as the one you just clicked) to download a ZIP file. Inside the ZIP file is a comma-separated values (.csv) file with the data you requested. This file can be opened in common spreadsheet editing software like Microsoft Excel or Google sheets.

Number of lines of data

5886 Sites Found

When filtering by date range, the results shown are for the entire month(s) selected.
To obtain the data specific for the dates selected, download the CSV file by clicking the 'Obtain Measurement Data' button.

8. Open the .csv file in the software of your choice. It is recommended that you use Microsoft Excel and save the document as an Excel Workbook (.xlsx) for easier editing and analysis. You should make a copy of the data in case you make any permanent changes that you don't like. Row 1 of the spreadsheet contains short abbreviations for the categories of each column, while Row 2 has a more detailed description of the significance of the data below. Not every cell will be filled. Feel free to add, hide, or remove columns or rows to make working with the data easier.

Page 5 of 12

Process Data

1. Contrails

- Sort the data. You will sort by Number of short-lived contrails observed, then number of spreading contrails observed then number of non-spreading contrails observed (Columns AM, AN, and AO).
- Select all rows from row 3 to the last row. You will not select row 1 and 2 because it is the header data. If you sort the header data, it will not stay at the top. You also can not indicate that you have a header row because there are two rows.

	A	B	C	D	E	F
1	organizational_name	org_name	site_id	site_name	latitude	longitude
2	The GLOBE	The name	The GLOBE	The name	The latitude	The longitude
3	6511386	Boston Un	215085	10SEG739	37.69314	-122.162
4	17043304	United Sta	218496	10SEF9089	36.96522	-121.98
5	17043304	United Sta	218492	10SEF9099	36.9598	-121.979
6	17043304	United Sta	218508	10SEF9109	36.95979	-121.978
7	17043304	United Sta	218494	10SEF9189	36.96422	-121.969
8	17043304	United Sta	218590	10SFF1068	36.87478	-121.759

- Select the Sort and Filter option from the toolbar.

- d. Select the Custom Sort option from the dropdown.

- e. Click on Add Level in the box that pops up.

- f. Select column AM from the drop down in the Sort By category.

- g. Click Add Level.

Sort

Buttons: Add Level, Delete Level, Copy Level, Options...

My data has headers: ☐

Column	Sort On	Order
Sort by: Column AM	Values	A to Z

OK Cancel

- h. Select Column AN from the dropdown in sort by.

Sort

Buttons: Add Level, Delete Level, Copy Level, Options...

My data has headers: ☐

Column	Sort On	Order
Sort by: Column AM	Values	A to Z
Then by: [dropdown]	Values	A to Z

Column AG
Column AH
Column AI
Column AJ
Column AK
Column AL
Column AM
Column AN
Column AO
Column AP

OK Cancel

- i. Repeat the process for column AO.

Sort

- j. This should bring all observations with contrails to the top of your file. You can then work with those rows.

2. Obscured vs. Overcast

- a. You can filter the data by clicking on Row 1 (circled) to highlight it, then clicking 'Filter' from the 'Sort & Filter' tab.

The screenshot shows a Google Sheets interface. At the top, the formula bar displays 'organization_id'. Below it, a table with 8 columns (A-H) and 7 rows (1-7) is visible. Row 1 is highlighted in green. The columns are labeled: A (organization_id), B (org_name), C (site_id), D (site_name), E (latitude), F (longitude), G (elevation), and H (mes). The data in rows 2-7 is partially obscured by a 'Sort & Filter' menu that is open. The menu has a 'Filter' button, which is highlighted. A tooltip for the 'Filter' button is visible, showing the text: 'Filter (Ctrl+Shift+L)', 'Turn on filtering for the selected cells.', 'Then, click the arrow in the column header to narrow down the data.', and a 'Tell me more' link. The background of the spreadsheet shows data for rows 2-7, with columns A-G visible. The data in column H is partially obscured by the menu.

1	organization_id	org_name	site_id	site_name	latitude	longitude	elevation	mes
2	The GLOB	The name	The GLOB	The name	The latitu	The longit	The eleva	The
3	63292585	116Secon	187206	116Secon	24.76689	46.77457	610.6	####
4	63292585	116Secon	187206	116Secon	24.76689	46.77457	610.6	####
5	63292585	116Secon	187206	116Secon	24.76689	46.77457	610.6	####
6	63292585	116Secon	187206	116Secon	24.76689	46.77457	610.6	####
7	63292585	116Secon	187206	116Secon	24.76689	46.77457	610.6	####

- b. Filtering the first row adds an arrow at the end of every cell in the row. To filter based on certain criteria, click on the arrow of the cell you want and then make sure only the values that you want to see are checked. In the below example, to filter the data so that I only see submissions where the cloud cover is either obscured or overcast, I find the column that describes the cloud cover (called 'sky conditions: cloud cover' or column O),

click the arrow, then uncheck every value in the dropdown except for 'overcast' and 'obscured'. If you'd like to filter out empty values for a certain variable, just uncheck '(Blanks)' in the dropdown.

3. Smoke

- Follow the filter directions for obscured vs. overcast using the criteria below.
- Filter on column O, sky conditions, for obscured and on column AC, sky conditions:smoke for TRUE. This can be done in one or two steps

Data Tip

To hide a column, right click on the alphabetical label and click “hide”. It is recommended to hide instead of delete columns you don’t want, as you can bring them back later by clicking unhide.
