

Cooperation within the European Phenology Campaign

Marina Nemet, Elementary School Vladimir Nazor from Virovitica, Croatia

February 2019

Since the spring 2017 Elementary School Vladimir Nazor from Virovitica, Croatia under the GrowApp European Phenology Campaign has cooperated with Elementary School Ivana Brlić-Mažuranić from Virovitica. We have exchanged our experience several times. In spring and autumn 2017, then in spring and autumn 2018.

This year we have included students from Grammar School in Virovitica and third graders from Elementary School Cesarec from Špišić Bukovica near Virovitica who are also planning to join a GLOBE programme and participate in campaigns.

It is very fun for students to take part in these campaigns due to the presence of mobile applications. They feel useful and are proud when their photography is being published on internet or when they receive a badge or a certificate of participation from USA.

Students like this method of work because they learn from each other and hope that the cooperation between schools will take place more often.
