# Cooperating schools

## Primary and secondary school Mánesova Otrokovice

- Teacher - **Pavel Broža**

## Primary School no.1 in Bieruń

- Teacher – **Joanna Gawor**
- Elevation is 242 m.
- Latitude: 50.0936° Longitude: 19.0892°

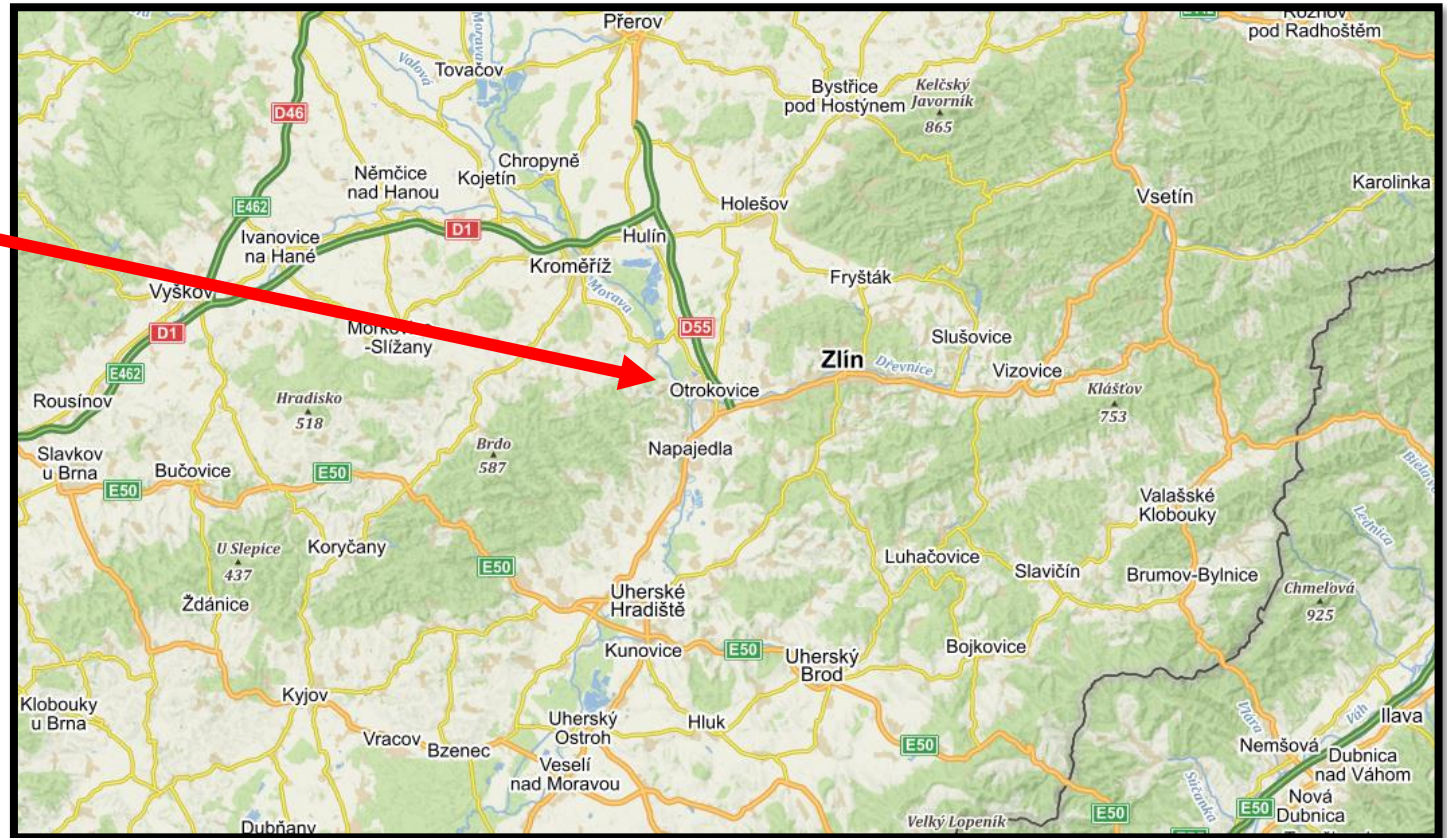

# Otrokovice

Elevation - 183 m a. s. l.

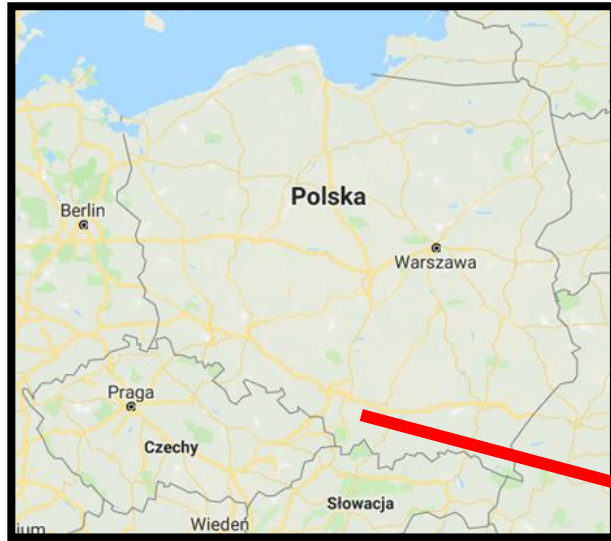

Latitude:  $49.2172^{\circ}$

Longitude:  $17.511^{\circ}$

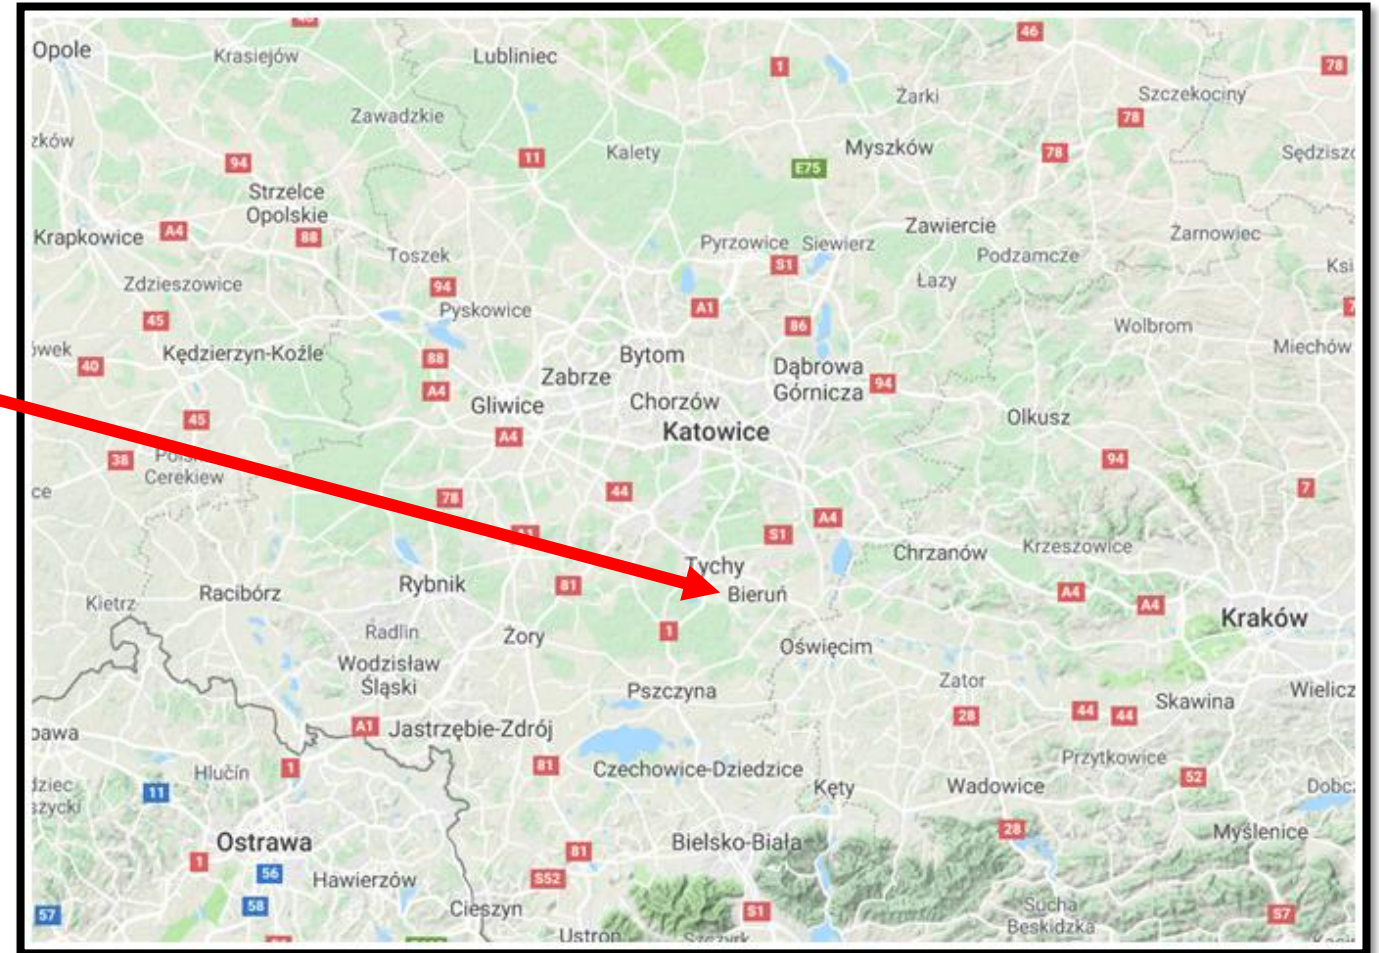

# Place in Poland

The partner school is from Bieruń

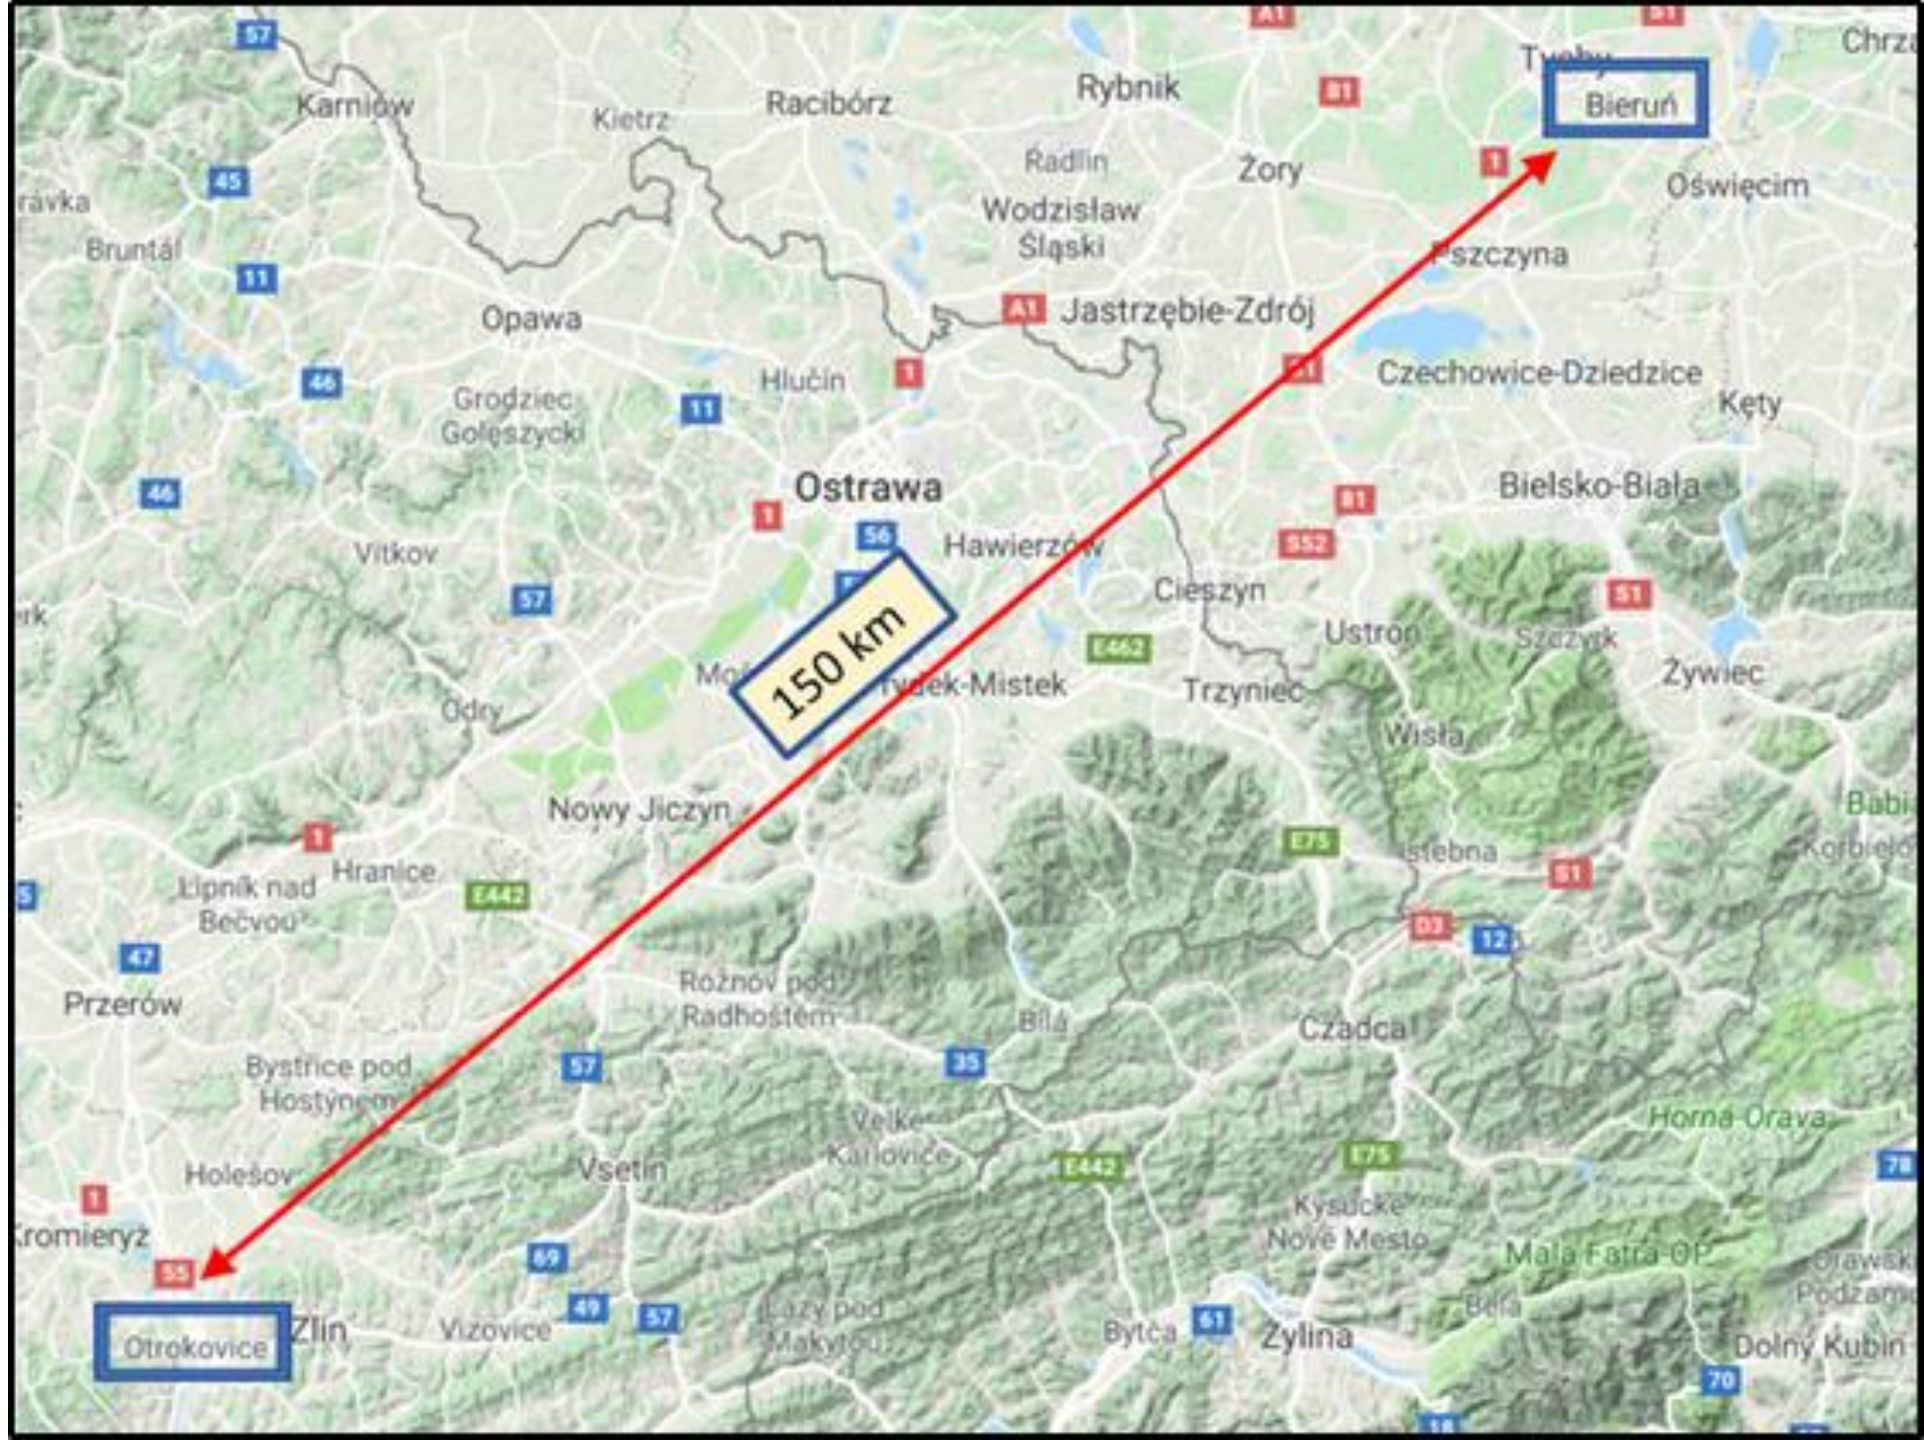

Elevation - 242 m a. s. l.

Latitude: 50.0936°

Longitude: 19.0892°

Air distance...

# Observed birches

## Otrokovice's birches

[First Czech birch](#)

[Second Czech birch](#)

## Bieruń's birche

**2nd November 2019**

# Science question and hypothesis

Q:

What influence air temperatures and precipitation have on birches falling asleep in Otrokovice and Bieruń?

H:

Higher temperatures and more rainfall will cause birches to fall asleep later than birches that have lower temperatures and less rainfall.

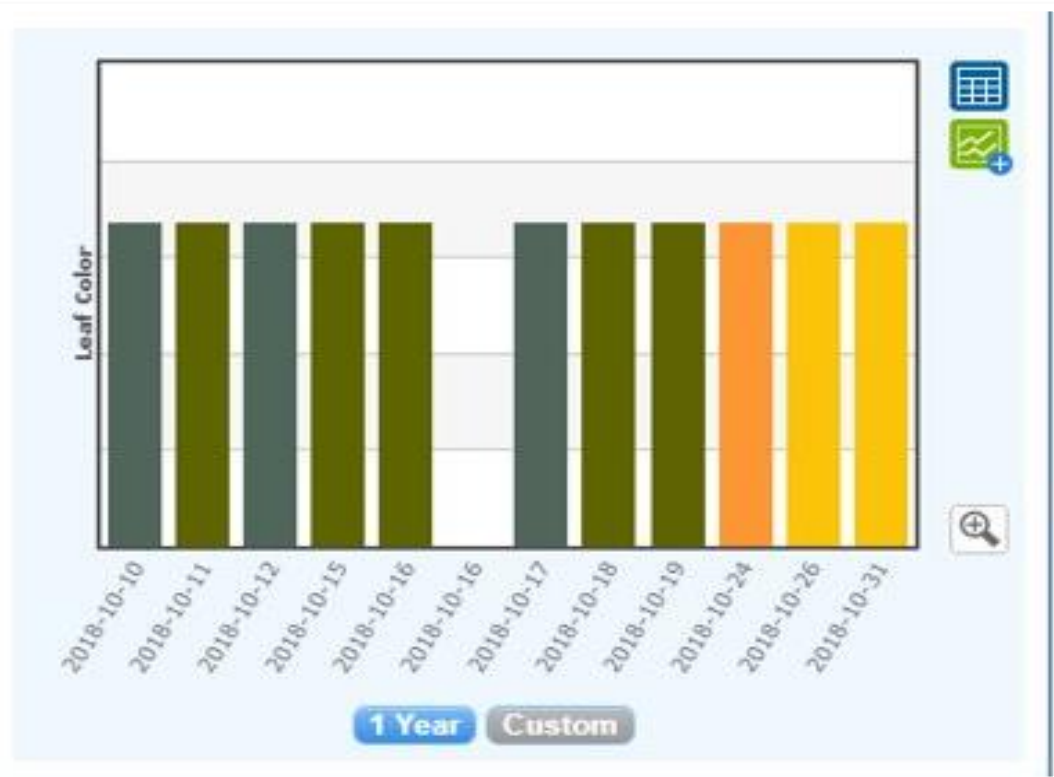

# Comparison of influences

## Otrokovice

Leaves started falling: 10. 10. 2018

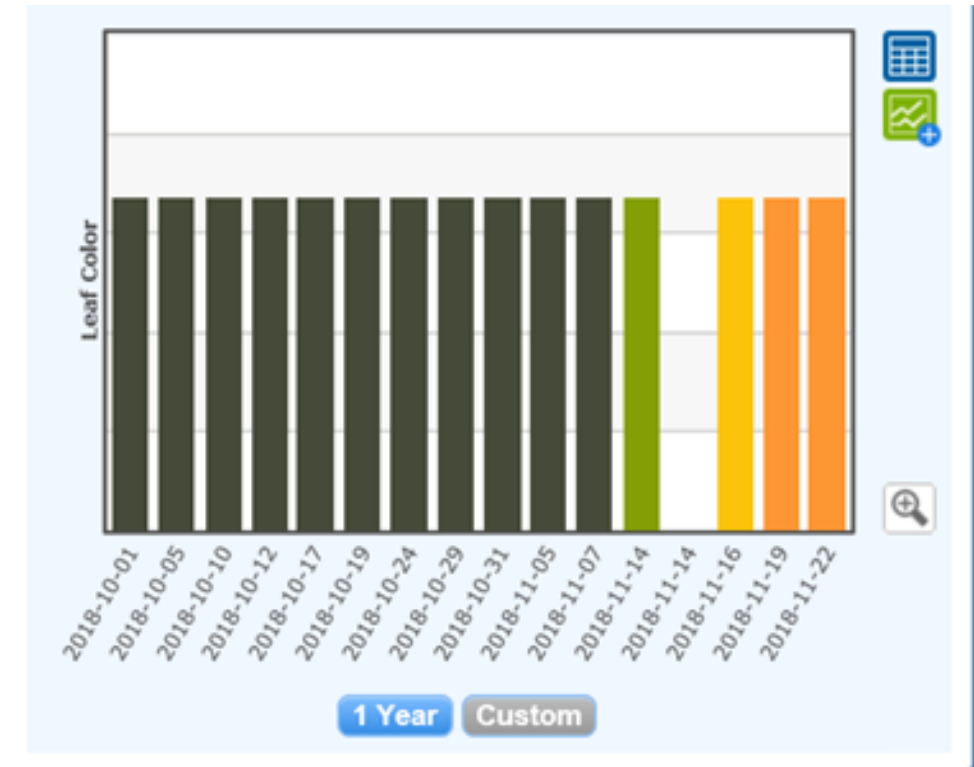

Leaves ended falling: 1. 12. 2018

## Bieruń

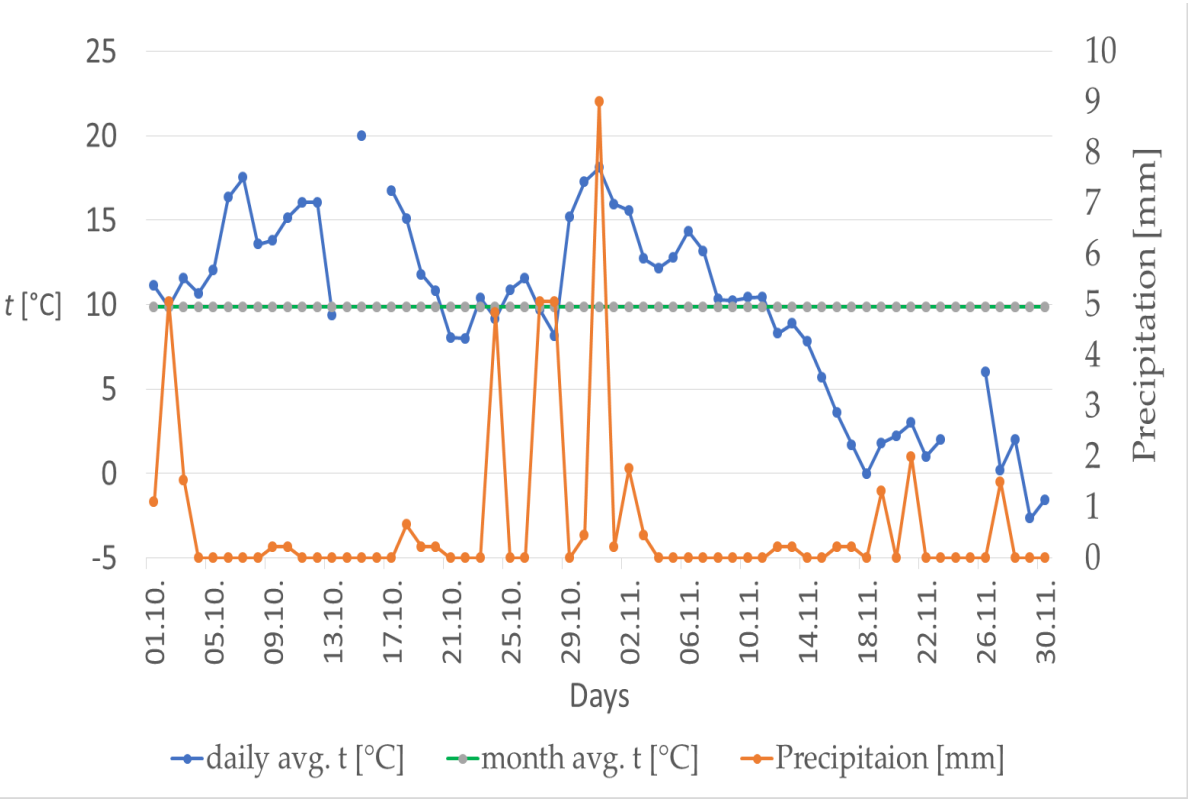

Leaves started falling: 14. 11. 2018

Leaves ended falling: 29. 11. 2018

# Comparison of influences

## Otrokovice

## Bieruń

# Conclusions

## Otrokovice

- First leaf falled on 10. 10. 2018 so we start photographing and writing data to globe.
- Last leaf falled on 1. 12. 2018

## Bieruń

- The first leaf fell down on the 14th November and the last one – 29th November.
- On 20th November the first snow was observed.

# Verification of hypothesis

- Higher temperatures and more rainfall will cause birches to fall asleep later than birches that have lower temperatures and less rainfall.

The hypothesis is refused.

# Summary

Thank you for listening
