

GPS Investigation

A GLOBE® Learning Investigation

GPS Investigation at a Glance

Protocol

Onetime Only Measurements:

Time of initial recording and averaged latitude, longitude, and elevation for the following Study Sites:

Atmosphere, Hydrology, Land Cover, Soil Characterization, Soil Moisture, and your school which is the center of your GLOBE Study Site.

Suggested Sequence of GPS Investigation

- Read the Protocol to learn precisely what is measured and how.
- Copy and distribute the *Field Guides* ([GPS](#) and [Offset GPS](#)) to your students.
- Prior to using the GPS receiver, identify all of your GLOBE sites that require latitude, longitude, and elevation measurements.
- Have the students conduct some test measurements near your school, following the [GPS Field Guide](#) found in the Protocol section. When you and your students are comfortable with the operation of the receiver go to your GLOBE study sites and, following the [GPS Field Guide](#), take the position measurements at each site. Report your results back to GLOBE as soon as possible upon completing the measurements and calculations.
- If one or more of your sites are obscured by tree canopy, follow the [Offset GPS Activity Field Guide](#) to determine your site's position.
- If your students are experiencing difficulties with performing the measurements or are interested in further activities related to global positioning systems, refer to and conduct one or more of accompanying activities ([Relative and Absolute Directions](#) and [What is the Right Answer?](#))
