

ENSO PHASE III “Water in Our Environment” Collaboration Webinar

Webinar # 1

Date: Tues., Oct. 3rd

Time: 8 pm ET/7 pm CT/6 pm MT/ 5 pm PT/ 1 am UT

Log in information: <https://gsfc610.adobeconnect.com/webinar1/>

8 to 8:30 pm: To start off Phase III of our ENSO Campaign, we are going to focus on Earth’s water. The first half of the webinar will be a presentation from a NASA scientist, Dr. John Bolten. He will share the many ways in which NASA missions are able to study Earth’s water.

Dr. John Bolten is the Associate Program Manager of Water Resources for the NASA Applied Sciences Program. His research focuses on the application of satellite-based remote sensing and land surface hydrological modeling for improved ecological and water resource management. Dr. Bolten is involved in several water resources management efforts in the Middle East, Central and North Africa, Southeast Asia, and United States. He is serving on the Panel on Global Hydrological Cycles and Water Resources for the 2017-2027 Decadal Survey for Earth Science and Applications from Space, and also serving as NASA DEVELOP Program Lead Science Advisor for the NASA Goddard Space Flight Center as well as Associate Editor for Water Resources Research. He received the M.S. and Ph.D. degrees in geology with an emphasis in hydrology and remote sensing from the University of South Carolina.

8:30 to 9 pm: The second half of our webinar will focus on Collaboration. We will start off by explaining the vision for our “*Water in Our Environment*” Student Research Campaign. Then we will elicit feedback from you to learn how you are currently studying water in your environment, using both GLOBE and non-GLOBE resources. We will talk about types of collaboration opportunities you envision for this year, and brainstorm on what can we do to support you. We will finish up by showing how to use [Worldview](#) to look at NASA EOS water-related datasets.

We realize this time frame will not be good for everyone, and plan to stagger our webinar times to take into account the time zones for all our GLOBE family across the world. This webinar will be recorded, and you will be able to access it at your convenience.
