

Activity 1 – My Tree

You continue observing the same tree(s) as in the Spring Phenology Campaign:

- Check your tree. Are there any visible changes? Can you find the branch and leaves that you have observed in spring?
- Take picture(s) of your tree using [GrowApp](#) and share your picture at the [Discussion forum](#).
- If you are going to observe other tree(s), follow the instructions below.

You are new to the Campaign or you want to observe new tree(s):

1) Select a tree:

- Close to your school or home, so that you can observe it often
- One of the [7 species of the campaign](#)

- With at least one branch that is positioned low so that you can observe the leaves closely.
- The tree should not be shaded by a building (Ideally the tree-building distance is more than the height of the building)

2) Describe the tree and the site where it grows:

- Take GPS coordinates and write down altitude as well
- Find out what is the Latin name of the tree species (e.g. *Corylus avellana* for hazel)
- Name the tree (e.g. Hazel 1)

3) Take pictures of the tree using GrowApp.

- The use of [GrowApp](#) is very easy and intuitive. See the [manual](#) on the GLOBE website.
- Share your picture at the [Discussion forum](#).

The activity should be completed as soon as possible, not later than September 20th.
